Most Important Publications !

By PANDIT GANGA PRASAD, JYOTISHACHARYA

(The World-renowned Commercial Astrologer of this century)

1. SIXTEEN YEARS' ASTRONOMICAL BHARATIYA EPHEMERIS—1955 to 1970 A.D. Price Rs. 19.00. Part I: 1955 to 1960 Rs. 8.50; PART II: 1961 to 1970 Rs. 10.50 (or Sh. 21).

SPECIAL FEATURES:—Explanation of symbols; Table of aspects with the 'short-hand' symbols and for each aspect; List of Eclipses—1955 to 1970; Table of correction for Local and Sidereal Time; Table of Houses—Bombay, Poona, Calcutta, Indore, Madras and Bangalore; Ephemeris 1955 to 1970 A.D., containing Daily positions of the places of Sun, Moon, Mars, Mercury, Jupiter, Venus, Saturn, Herschel, Neptune and Monthly (1st day of month) position of Rahu and Pluto; Tables of Local Mean Time of sunrise for Latitude 60° North to 50° South; Tables of Local Mean Time of sunset for Latitude 60° North to 50° South; Tables of declination of planets; Tables of Logarithms for finding planets' places according to the Sayana system (in English).

2. 64 YEARS' EPHEMERIS—1890 to 1953 (Hindi)—Rs. 7. SPECIAL FEATURES:—Weekly position of the planets, Daily Moon, Monthly position of Rahu, Herschel, Neptune and Pluto, Calculations of Birth place, Standard Time and Local Time, Preparation of Horoscope, Panchang Calculation, Vimshottari Dasa, etc.

3. ADHUNIK TEJ MANDI KA VIDHAN or details of 2772 aspects in degrees (in Hindi) (Pp. 296). Price Rs. 8.

4. VYAPAR CHINTAMANI—(A marvellous book on Teji and Mandi both)—In Hindi. Pp. 400. Price Rs. 10.50. In this book we have given after a vast study of planets conclusions of about 3000 yogas of Teji and Mandi for Long period, Monthly, Weekly, Daily Market Forecasting. Rupees and Annas in prices. This is the golden opportunity for unexpected gains. The businessmen are therefore advised to obtain from us special chances. Forerunners are Forewarners.

5. WORLD TIME CLOCK—Containing Latitudes and Longitudes of about 4500 important Cities of the World. SPECIAL FEATURES:—(English). Price Rs. 10.50. Tables of Sidereal Time 1800 to 2300 A.D., I.S.T., Tables of Ascendants—Latitudes 0° to 60° North and 0° to 50° South. Tables of sunrise L.M.T.—Latitudes 0° to 60° North and 0° to 50° South. Tables of places, Longitudes, Latitudes, Local Time by correction to I.S.T., etc.

6. PERPETUAL MARKET FORECAST AND BUSINESS ASTROLOGY—Price Rs. 10.50. SOME OUTSTANDING FEATURES:—(1) This secret and private book consists of the most hidden principles of Market Forecasting. It is the outcome of author's 30 years' practical study, observations and consultations of many important books of Western and Eastern Astrology. The renowned and learned author has prepared this book after his complete research and life-long experience. This work may be accepted as one of the best research on this subject. Even a layman can understand this book. The book is *useful for ever* and is *not confined to any particular year.* (2) Preliminary ideas for Market Forecast. (3) Aspects—Their effects on market prices in details, formulating 110 *infallible and important astrological rules* for Market Forecasting. (4) Theory of Forecasting rise and fall in market prices. (5) Eclipses—Their effects on market prices in details. (6) Practical application of all the 110 astrological rules in forecasting prices with practical illustrations. (7) Outstanding astrological yogas and aspects helping success in business. (8) Monthly Market Forecast of prices of Gold, Silver and Cotton from 1955 to 1960 A.D.

7. COMMERCIAL EVER READY NUMEROLOGY—(Best application of Numbers to Forecasting Market Prices, Winners in Lotteries and Horse-Racing, etc.)—Price Rs. 25. SPECIAL FEATURES:—(*i*) Even a layman, not conversant with knowledge of Astrology, will understand this book easily as the book deals primarily in Numbers 1 to 9 and their compound numbers; (*ii*) Besides aforesaid numbers, the book deals with Friends Number, application of numbers to: Lotteries, Horse-Racing, American Cotton Futures, Dhruwanks, Forecasting Market prices of commodities and shares; (*iii*) All rules have been supplimented by tables and illustrated by concrete examples with prove that the rules are infallible. The price is not high in comparison of its usefulness and the returns received.

8. COMMERCIAL WEEKLY MARKET FORECAST AND SPECULATORS' GUIDE for 1959 to 1963 A.D.—Price Rs. 25. SPECIAL FEATURES:—(*i*) Commercial Weekly Market Forecast of Fluctuations in prices of Gold, Silver, Cotton, Jute B.T., Groundnut, Groundnut oil, Castorseeds, Linseeds, Turmeric, Mortar, Gwar, Gur, Sugar, Shares—Tata (ordinary), Indian Iron, Drawing, Security, etc.; (*ii*) Gali of Rice and Decline, etc.

SPECIAL REPORT
OF
A. C. Percy for Budget and February 1959

——:——

Sure success and golden chance to make money in February and Budget of 1959 is knocking at your door. Our forecasts have worked wonders and proved amazingly correct.

Shares:—Sharp Mandi in Shares was predicted by us from November 1958 before Diwali and also in December after along spell of Teji and it proved quite correct.

Silver and Gold:—Long Teji line still running has been predicted by us from July from price of Rs. 179-8-0 for Silver and from Rs. 103-8-0 for Gold and it also proved amazingly quite correct.

Cotton, Kapsia, Groudnuts, Castorseeds and Oils, Rayons, Chemicals, etc.:—Forecasts similarly proved correct.

Please don't fail to get our special forecast for Budget 1959 as some Yogas occurred in past are reoccuring from February/March, 1959 and the same will give the same effect on all market in especially on Shares. Apply for fees, etc., enclosing stamped and self-addressed envelope.

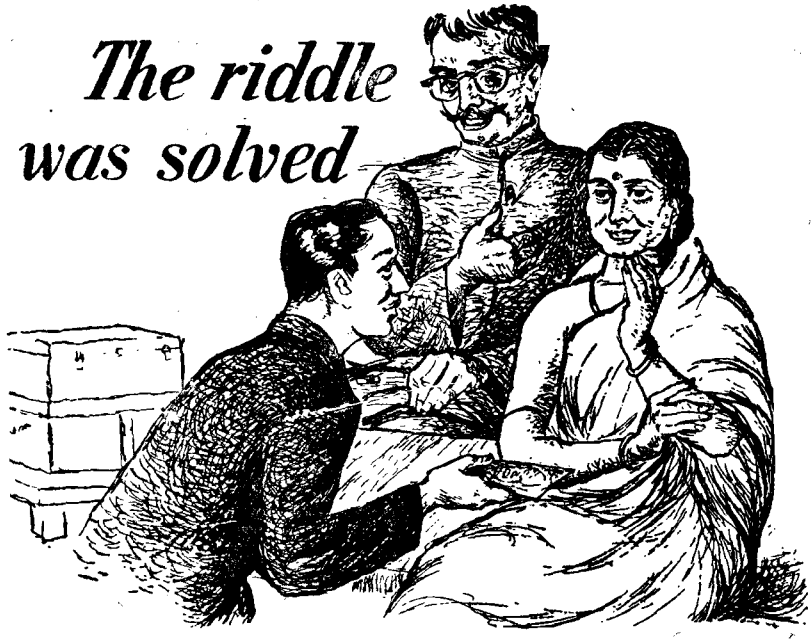
The riddle was solved



I am a civil engineer. My father was an ordinary office clerk. I could not explain my expensive education until 5 years ago when I brought home my first salary cheque. That was the day when my father told me he had sold my mother's jewellery years ago and invested the proceeds in National Savings Certificates. He had also been adding to this investment by regular savings He enjoined upon me to save regularly and invest likewise and I am glad I heeded him. Today I have a small capital which I am using for advanced studies abroad.

Investments in NATIONAL PLAN SAVINGS CERTIFICATES and other Small Savings Scheme securities of the Government come back to you with tax-free interest. They serve you and the NATION by providing resources for the country's development.

12-YEAR NATIONAL PLAN SAVINGS CERTIFICATES

- 5.41% tax-free interest paid annually.
- Easily available from all Post Offices in denominations of Rs. 5, 10, 50, 100, 500, 1,000 and 5,000.
- GUARANTEED by Government of India

OTHER GOVT. SECURITIES under the SMALL SAVINGS SCHEME:
10-YEAR TREASURY SAVINGS DEPOSIT CERTIFICATES
POST OFFICE SAVINGS BANK DEPOSITS

DAS/325

NATIONAL SAVINGS ORGANIZATION

Further particulars and/or rules governing these investments available from the National Savings Commissioner, Nagpur or the Regional National Savings Officer of your State.

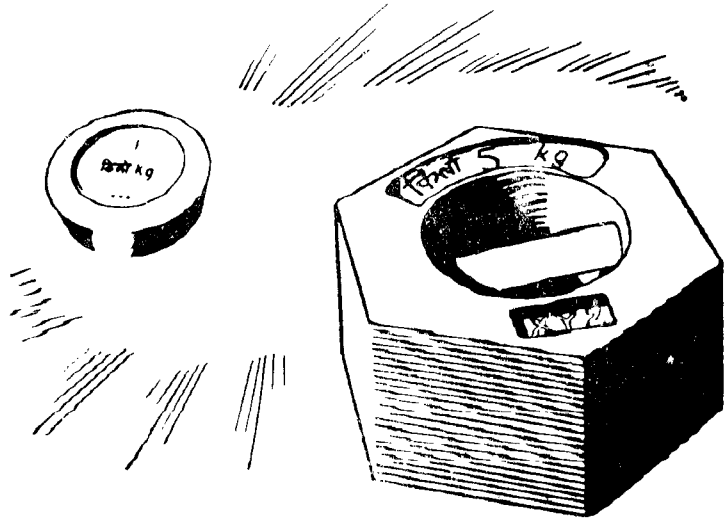
First Phase



The first phase of the change-over to the Metric System of Weights and Measures began on October 1, 1958. The use of Metric weights has become legal in selected areas of the States.

The Metric System has been introduced also in Government departments and industries like cotton textile, iron and steel, engineering, heavy chemicals, paper, cement and jute.

The reform will be gradually extended till the whole country is covered.

WORLD PREDICTIONS FOR 1959

UNLIKE modern astronomy which is concerned only with the physical aspect of the universe, astrology deals with life and living things. In order to understand the truth of astrology which is basically a scientific art rather than a pure physical science, scientists must remain free from preconceived notions. The late John O'Neil, Science Editor of *New York Herald Tribune*, says: "A vitalistic cosmogony will recognise a complete and most intimate harmonic relationships in a single pattern between every entity from the fundamental particles through the atoms, through men, through the planetary system, through the galaxies, through the cosmos to the God-head himself. The hypotheses of astrology are consistent with such a vitalistic cosmogony. In this respect the astrological concept is much more modern than the astrological". He further adds that "scientists cannot look down on astrology, instead they must raise their eyes to take in the higher horizons that astrologers have preserved for them".

After reading in *The Hindu*, a report of our inaugural address to the All-Kerala Astrological Association, an Indian gentleman now resident in Ameriea, who claims to be an astronomer belonging to the favoured caste of "scientists who have discarded astrology", felt "outraged by the assumption that there is anything in common between astrology and astronomy". The Sanskrit term *Jyotisha* is all comprehensive and includes both astrology and astronomy and we reiterate that astrology does make use of astronomy as the physical basis of astrological procedure for the horoscope is nothing but a picture of the heavens with reference to the date, time and place of birth. Because astrology is not amenable to the favourite methods of investigation employed by the astronomers, it does not mean that astrology is a superstition. Astrology has shown that prediction is possible. It is for these astronomers to revise their antiquated, orthodox and superstitious views about astrology —a unique branch of knowledge which has the wonderful capacity of predicting the future of individuals and nations on the basis of planetary movements—astronomy. Belittling the glorious astrological—cultural—heritage of India is no sound argument against astrology.

Modern astronomy only makes large assertions but has no demonstrable truth. We simply have to take on faith the "light years that proliferate in mighty noughts". Modern astronomy is a construction of materialistic western civilisation and about as useless as a feather-bed in the tropics. "Astronomers see dots, stripes, and streaks on the Moon and Mars. But they argue whether the Moon, supposedly nearest to us, is made of rock, dust or craters." It is no use bringing these speculators as a handle to beat the astrologer. Astrology is the earliest systematised attempt on the part of the great Maharshis to demonstrate that planets in their courses are correlated to affairs on this earth, and that chance and accident have no place in life. There is no use rationalising these things in the way the scientist desires. Let us humbly recognise that there are still imponderables behind both the jargon and the achievements of the present-day scientists. In an age that accepts cosmic radiations as fact the postulate that the solar system has influence upon the earth, invisible to the five senses but symbolised in the horoscope, need cause no disquiet to the materialistic mentality of the scientist or astronomer. The object of modern science including of course modern astronomy is exclusively the spatial and the inorganic while the object of astrology is the interpretation of human experience accepting the human being in the

many-sided manifestation of his nature. So long as the scientist declaims against astrology marshalling endless legions of scientific irrelevances, we can afford to let him disclaim till he is black in the face, while we can go on expounding the self-determining character of astrology that establishes its own validity.

A unique feature of Hindu astrology, little known to Western astrological pandits and their Indian counterparts, is the importance given to the Sun and his movements, in the formation of the Planetary Cabinet. The commencement of the lunar year and the entry of the Sun into the sidereal Capricorn (*Makara Sankranti*) have been considered from times immemorial as the two important bases of mundane astrology. It is, of course, left to the discretion and experience of the individual astrologer concerned to select whichever he likes best or to combine and coordinate both. It is amusing to find that some English and American astrologers have been congratulating themselves as the discoverers of the "true method of mundane predictions" in the shape of the so-called capsolar chart. A capsolar chart is nothing but a horoscope cast for a time of the Sun's entry into Nirayana Makara. This method has been known to the Hindus for thousands of years that they have almost perfected it. The Sun whom the ancient Hindus considered as Suryanarayana —the Great Intelligence—and the prime cause of all creation, sustenance and destruction and not merely as a mass of blazing fire, was given a certain special symbolic distinction—*Sankranti Purusha*—as acquiring special characteristics as a result of his entry into Capricorn or Makara—marking thereby the commencement of Uttarayana or the winter solstice and influencing world affairs accordingly. Most almanacs in India carry even to this day, a description of Sankranti Purusha—Sun Personified—and accordingly portray the results likely to happen. It is indeed a pity that some of our own astrological scholars who are fully aware of these facts should still toe the line of those who think that it is the Western astrologers that have really made the grand discovery of the importance of Makara Sankranti. We are glad to note however that quite a number of Western astrologers have been coming forward, though late, in extending to Indian astrology, the recognition and originality that are its rightful dues.

The Hindus have always attached great importance to the positions of planets and the Planetary Government obtaining at the time of commencement of each lunar year. Sixty lunar years commencing from Prabhava and ending with Kshaya constitute a cycle. Prabhava denotes the birth of a new cyclic force. Vibhava indicates its expansion. Sukla denotes its vitality. Pramoduta connotes its further development. Prajotpatti signifies the various manifestations of this force. Angirasa suggests the different embodiments or forms this force takes. Similarly for all the sixty years, the names are given indicative of the work they are able to perform till Kshaya or destruction which means that the force generated in Prabhava has been destroyed thus marking the end of the cycle. The 33rd year of this cycle going under the name of *Vikari* commences on 8-4-1959, Wednesday, at about 8-59 a.m. (I.S.T.) Then there is the Planetary Cabinet, in the formation of which, the reference is always made to the movements of the Sun and of the Moon to a lesser extent. There is much food for reflection in the method governing the allocation of planetary portfolios every year. This takes into account the remarkable changes the solar ray undergoes as a result of the Sun's passage along the constellational belt.

We shall first sketch general results due to the Planetary Government. For the current year Vikari as the King happens to be Jupiter, there will be timely rains, people will become more religiously inclined, rule of righteousness will prevail and people in general will be happy and healthy. The Moon being Prime Minister denotes good yield of crops due to timely rains, prevalence of general happiness, availability of plenty of fodder and prosperity for milching cattle. Good rains, plentiful yield of paddy and wheat and a return to religion are shown by Jupiter being Lord of Vegetation. Want of timely rains, ordinary crops, rain-bearing clouds being destroyed by winds, general affliction to humanity will all be the consequences of Mercury becoming the Ruler of Grains. The Moon as Lord of Clouds will cause good rainfall, good yield of crops and plentiful availability of milk and milk products. Saturn as Ruler of Juices is not a good augury. There will be ordinary rains, poor supply of foodgrains and juicy articles, increase of bad characters and physical distress to people due to under-nourishment. Jupiter as Lord of Metals indicates brisk trade in gold, indigo, silk and yellow articles in general; but there will be a large number of naval mishaps. A tolerably balanced trade is shown due to the Moon being Lord of Commerce, but cotton will have an uncertain trend. The Moon also happens to be the Commander-in-chief. This favours good administration, good rains, well-trained and disciplined armies and much revenue for the

Government As Krishna becomes the Lord of Cattle, agricultural conditions will improve and there will be plenty of milk and fodder.

It will be seen that a conflicting mass of results are indicated by the Planetary Cabinet. A discerning astrologer should sift the appropriate ones bearing in mind the influences due to the yearly chart, the transit movements of planets and the occurrence of other celestial phenomena such as eclipses, etc. This year's Planetary Government has a peculiarity. Of the nine portfolios, four are held by the Moon, three by Jupiter and one each by Saturn and Mercury. The most important planets of the solar system, *viz.*, the Sun and Mars, representing royalty, aristocracy and the fighting classes and Venus signifying luxuries and women have no place at all. This has a great bearing upon the political conditions of the world. The preponderance of the Moon's influence as holding four functions and the absence of Mars foreshadow very interesting developments. The Moon is an unsteady planet. He is both Prime Minister and Commander-in-chief. Therefore, in several democratic countries, authority will come to be vested more and more in the hands of the army, not by violent *coups d'etat* or revolutions but by some sort of an understanding between the army and political leaders. The role of the politicians will become more and more insignificant and subordinated to the whims and fancies of military men. In other words, in many countries people will willingly accept authoritarian rule. Another peculiarity is Jupiter is head of the Government and has a dominating role to play. In countries where democratic Governments functioned before and in countries where democracy will cease to function in the course of this year, some sort of a benevolent authoritarianism will prevail. The jovian influences are also capable of infusing into the minds of statesmen a better sense of moral values. This means that in the settlement of disputes nations will employ violence to the absolute minimum necessary. Men's outlook will become more broadened and tolerant. Two more outstanding phenomena, *viz.*, Saturn being confined to a minor portfolio and Venus not getting any place in the Cabinet merit our attention. The swing—political and economic—all over the world will be more towards the right. In India women will play a less important role in influencing the affairs of the country and they will find enough time to devote themselves to their more responsible and important functions of running homes and training children instead of competing with men in different walks of life. Promoters of feminism will find to their utter dismay that more and more of our educated ladies would prefer the obscurity of home and hearth and consequently the place of dignity and superiority vouchsafed for them by Indian tradition, to the false sense of equality, which some of our misguided leaders have thought fit to impose on them. Saturn's insignificant position would be a setback for the working class. Labour movements and trade union activities all over the world would suffer a setback though the spate of violence to be let loose by them will not be inconsiderable. These are general trends due to the disposition of the Planetary Cabinet and they are subject to variations due to influences occurring in the horoscopes of different countries.

In the astrological nomenclature, Jupiter stands for religion, justice, finance, philanthropy, nobility, peace and wisdom. His being the King signifies that new forms of religious conceptions will arise and hold sway so that hatred, immorality and cruelty will show some signs of weakening, though temporarily. Political power, as we have already observed, will pass into the hands of noble and generous minded persons who will endeavour to dispel dark forces and work for the good of the people. As a consequence, whilst on the one hand, the sharpness in the points of tension like Formosa, Korea, etc., will become somewhat blunted, and the threat of war will temporarily recede, preparations in secret will go on feverishly. The 'Peace' denoted by Jupiter this year is only a false peace and a passing phase and not a forerunner of the utopia of universal brotherhood fondly cherished by idealistic dreamers. It is just an international expediency to enable nations to perfect deadlier forms of warfare and destruction. This lunar year goes under the name of *Vikari*. Vikara means perverse and we will have therefore some sort of a perverse peace, because the two power blocks feel that they cannot afford to wage war. Vikara also means "agitation, excitement, contention and perturbation" and the year Vikari will fully bear out the meaning of Vikara.

At the beginning of the year, Saturn remains in Sagittarius—first quarter of Purvashada. He becomes retrograde on 16th April, gets back to Moola about 7th June, becomes direct on 5th September in the 3rd quarter of Moola and re-enters Purvashada by about 24th November. Again while just on the verge of entering Uttarashada, he becomes retrograde on 27th April 1960. Thus, while in Dhanus, Saturn transits Moola till 27th February 1959 and again from 7th June to 24th November 1959. Moola is the constellation of Kethu. It is dark in colour,

As it STRIKES ME

BY BHRIGU

Half-Baked Theories

It is one of the few paradoxes that some of the well-intentioned strike at the roots of a thought or culture which they claim to defend or resurrect; and it is painful to take the gauntlet with them when they happen to be our valued friends and contributors. In the interests of the basic principles of Hindu astrological thought, we are compelled to enter into a serious discussion with Mr G. C. Nixon on the question of Bhava (house) and Rasi (sign).

Mr. Nixon argues that after Parasara and Jaimini there arose a confusion between the house and sign systems in Hindu astrology, and that Mantreswara attempted a synthesis under foreign influences. This bogey of a foreign influence is not new to Indologists. Every European writer claims that anything appearing in ancient India was an importation from Europe. This pious view has been acting like the head of Charles I in the minds of many European orientalists, even when this ghost was laid to rest by many an Indian scholar of eminence. Mr. Nixon may quote the Tajika system of divination. Without entering into this problem here, we can only say that like the numerals, this divinatory system was carried by the Arabs from India, and that it came back to us with a new nomenclature. Mr. Nixon may not accept such a view, since he doubts even the historicity of Sri Rama. Here we may remind him that till the end of the last century Europeans doubted the historical character of the story of the Iliad. But the great work done by Schlimann and Evans has proved that Agamemnan and others did live once upon a time. Still the European scholar cannot concede the posibility of a historical nature to the story of Ramayana for the simple reason that India is not in Western Europe and that Hindus are neither Greeks nor Christians. It would be safer if these scholars refrain from making unfounded generalisations on Hinduism or on the great characters of the Hindu Epics. It is dangerous to arrive at an unfounded generalisation in an age of scientific thinking.

A glance at the *Brihat Parasara Hora Sara* clearly shows that the main teaching of Jaimini is already contained in it. Thus Jaimini followed the natural Karaka system of the benefic and malefic planets. For instance Jaimini has a sutra—*Dvitiyam bhava balam cara navamse* (2.4.1). He does not speak of rasi, but of bhava. That he does distinguish between *bhava* and *rasi* is clear from the aphorism: *Sarvatra savarna bhava rasayasca* (1.1.33).

This is also true of Parasara. Speaking of the effects given by Rahu and Kethu, he writes: *Yadyad bhava gatau vapi yad yad bhavesa samyutau.* Parasara could easily have used the word *rasi* without spoiling the metre. But he uses *bhava* not because he confuses the two but because he distinguishes them better than some of the modern astrologers of India and of the West. It is therefore not after Parasara and Jaimini that the conception of Bhava as distinct from that of Rasi emerged in Hindu astrology.

The argument given by Mr. Nixon in assuming a confusion only shows that there is a lack of proper understanding of the rules. The cusps of the 9th and 10th houses may fall in Sagittarius; and then Jupiter would be the ruler of a trine and also of a square. He is a benefic and also a malefic in this case. He will give mixed results. There is no absurdity here. For Leo if Jupiter becomes the lord of the fifth and the eighth Bhavas, we do not treat him as a pure benefic. Only Mars can become a benefic for Leo, according to Parasara and all other Hindu authorities. If one and the same planet becomes a benefic and also a malefic by virtue of his ownership of two different Bhavas, it does not mean that Parasara's rules do not apply to the rulerships of Bhavas. Evidently Mr. Nixon wants a planet to own either two benefic Bhavas or two malefic Bhavas; and this is a wishful reading of a basic principle.

The various yogas generally take into account only the Bhavas and their rulers. At the very beginning of the *Satayoga Manjari*, the author states: *Janmakalam sphutikrithya khetan bhavamsca sastratah...* We have to correct the longitudes of the planets and of the Bhavas before applying the yogas. This principle comes from the earliest times. When a yoga is said to be formed by the conjunction of the lord of a kendra with that of a trikona, the yoga is to be computed from the cusp of the ascendant, not from the ascending sign. If we cannot get such yogas outside of India, it is not the fault of the system, nor is it

(Continued on page 191)

Astrological Affiliations of Religion and Theology

BY DR. R. NAGA RAJA SARMA, M.A., PH.D., D.LITT.

CAREFUL and critical students of THE ASTROLOGICAL MAGAZINE will readily recall with admiration and gratitude the enormous amount of intellectual output that has been made available to the public by Prof. B.V. Raman, in the pages of his journal which is unique and the only one of its kind, in the East. He has not only made with unerring precision and astonishing accuracy, in the course of Editorials, striking and uncanny predictions, regarding the destiny of certain foreign dignitaries and development of political events, but, has generously, permitted others, to express their independent judgment on astrological and allied matters. The Annual published by Prof. Raman every year is an invitation and a challenge.

It constitutes an invitation to thinkers and writers to record their thoughts and reflections in the pages of the magazine. It is a challenge to all unbelievers, and hostile critics of astrology, which they have to meet. For, **the predictions regarding world-events, made and recorded in the annuals have elicited universal admiration for infallibility which must be galling to adverse critics of the noble and divine science of astrology.**

In the course of my previous contributions to the annuals, I have placed before the readers of THE ASTROLOGICAL MAGAZINE, some of my views on different aspects of theoretical and practical branches or departments of astrology. Some of my views have been commended by your readers, while, yet, others have been sought to be denied and denounced. As I am essentially a student of the *Vedanta*, and as I am mainly and primarily a student of philosophy and all forms and patterns of higher thought, I am personally indifferent to and unaffected by both attacks and admiration. My object throughout has been only pursuit of pure and systematic research in astrology, and endeavour to vindicate its status and prestige.

A correspondent has complained that what I had stated, in the course of my contribution to the symposium on profession, is very vague and that astrology seems unable to give guidance in the choice of a profession. The attitude revealed by this correspondent is undoubtedly typical and absolutely erroneous to astrology.

Writers of standard classics on astrology, like Varahamihira, have plainly pointed out that just as a lamp reveals objects, the science of astrology reveals the good and evil effects of the Karma of individuals done in previous lives.

What the nature of the Karma is, with all details could be known only to the Almighty Lord, the ruler of the entire cosmos in strictest accordance with the law of Karma, individual and collective. All other forms and degrees of knowledge are bound to be imperfect, vague and expressed only in terms of probabilities and statistical chances and opportunities for occurrence. The correspondent and others who think with him should have to remain satisfied with the theory and practice of astrology existing and functioning under the conditions and limitations inherent in all human efforts and endeavours.

The law, principle, or the doctrine of Karma is universal and omni-operative in its range and jurisdiction. It determines life and all intellectual, emotional, and volitional reactions and adjustments of individuals, groups, and nations, to characteristic surroundings and environment.

Personal preferences, prejudices and predilections, likes and dislikes, political, social and philosophical affiliations and loyalties, are all regulated by the law of Karma. Some feel a fascination for dictatorship. Others are attracted towards democracy. Some like and advocate violence. Others admire and advocate non-violence. There are countless other pairs of opposites (*Dvandvas*, as they are commonly styled) which can be easily imagined.

Ignorant and arrogant mankind may imagine that the preferences and prejudices, selections and rejections of the mind are all born of Freewill, but, the Fact is that they are all Divine directions, or Destiny directions, which toss hither and thither, individuals and nations, in the vast and limitless ocean of Time, now peaceful and placid, now stormy and tempestuous, by the force of gales and tornadoes springing from violent disturbances of mental pressure.

In the course of the present contribution, I propose to point out how certain well-known religious and philosophical tendencies and loyalties have their own *astrological affiliations and correlations*, which would constitute sufficient logical or rational justification of different religious and theological approaches to the problem of God, which has been rightly engaging the attention of the serious and thinking section of mankind

since the dawn of rational reflection.

(1)

The present problem appears to me to possess some special relevancy or appropriateness just now, when in the State of Madras a particular leader and his followers are condemning religions and philosophical systems as the machinations of the mischievous Brahmin priests and Brahmins trained by priestcraft in methods of blind belief and superstition. I say nothing more about this party and its leader as they could have no place in any serious intellectual discussion. **Your readers will certainly bear in mind the recent decision of the Supreme Court of India to the effect that breaking the images of gods, like Vinayaka, does constitute an offence that is punishable according to law.**

Whatever the law, my point is that **such irreligious and iconoclastic tendencies or criminal perversities have to be looked upon with a certain amount of pity and commiseration, because, the individuals affected by and suffering from such mental twists and perversities are, as a matter of fact, urged on in specific courses of action by their evil Karma correctly mapped in their horoscopes by characteristic configurations of planets.**

Atheistic and irreligious propensities are not to be judged by any means as manifestations of modern culture or civilisation. They have existed and revealed themselves, in different degrees of poignancy and prominence, almost from time immemorial. In India, the land of religion and theology, *theism* and *atheism* have existed side by side. *Agnosticism* has also flourished. In the earliest Vedic age, there prevailed *polytheism*, different deities having recognition. The subsequent Upanishadic period witnessed monotheism and monism, idealism, realism and pluralism. Then ensued the epic age and the age of the systems or *Darsanas*. That was also the age of the Gita. Religion and theology reached the summit of systematic speculation, unparallelled and unexcelled in any other country or literature in the world, in this remarkable age. The *Charvakas* were downright materialists. They denied the existence of God and the sacrosanctity and authority of Scripture. The *Buddhists* and *Jains* followed suit. *Nyaya* and *Vaiseshika* systems were Theists. They admitted the existence of God. The *Poorva Meemamsa* school recognized only ritualistic Karma. But, it admitted the authority of the Scripture.

The Vedanta (*Advaita, Visishtadvita* and *Dvaita*) was pronouncedly theistic. The Vedantic schools recognised the gods of the Hindu pantheon. While some regarded Lord Siva as supreme, others assigned supremacy to Lord Mahavishnu.

A colossal and almost inexhaustive volume of religious and theological literature has grown and centred round the Siva-Vishnu controversy which is yet to be critically examined by modern students and critics. This religio-theological literature reached the acme or high watermark of development in the sixteenth century that witnessed the most fertile and luxuriant growth of religion and theology under the fostering care and attention of Appayya Dikshita and Vijayindratirtha, champions respectively of the supremacy of Siva and Vishnu.

(2)

Let me leave the historical evolution of religion and theology with this, and proceed to an account of the astrological affiliations of religion and theology as found embodied in loyalties to different deities, gods and goddesses of the Hindu pantheon. It must be common knowledge that the distinguished Varahamihira commences his *magnum opus* with salutations to the Sun-God. This is followed up in his other work marked by brevity and concentration, *Laghu Jataka*. Sun being the life-giver and life-sustainer, should naturally evoke feelings of respect and admiration. Being the most prominently perceived heavenly body, the Sun must have appeared awe-inspiring even to primitive cave-dwellers and others of prehistoric periods.

In a later context (Chapter 2, stanza 5), Varahamihira has enumerated the lords or presiding deities connected with the different planets. The list of deities does not appear to be impressive or imposing. For, one thing, the omission of Siva from the list seems strange and inexplicable, but, curiously enough, Kumara, son of Lord Siva finds mention. Water is listed no doubt. It cannot be the liquid element, merely. It must have reference to Varuna (Indian Neptune who controls all water and watery media wherever found). Vishnu finds a place, but, his divine consort has been ignored. Indra and his consort are both lucky in having lordships assigned to them.

In this context, I did not get any light or help from the notes contained in Mr.V. Subrahmanya Sastry's edition. Interpretation has been rendered difficult by the rendering of the term in the original (KA) into Brahman. This term is by tradition and convention applied to the Supreme Substance, the metaphysically and philosophically the highest and the most exalted category—the *Summum Genus* of all existence. Brahman in the neuter gender will not suit the context. It should be Brahma, the four-faced (the term is in masculine gender) the lord of Saraswathi, who has been eliminated

from the list in question. On page 82, of the 1957 Edition of Prof. Suryanarain Rao's translation of *Brihat Jataka*, the term has been correctly rendered into Brahma, the four-faced.

I do not consider this to be the proper occasion for discussion of the logical correctness and astrological and philosophical adequacy of the lordships of planets here mentioned, but, this would suffice to indicate that in the times of Varahamihira certain astrological affiliations of religion and theology had been current coin and he had embodied these contemporary notions in his classic.

I would urge that the statement of Varahamihira should be read and interpreted in conjunction with the generally accepted theological trends and tendencies. Does Varahamihira salute the fire-god controlling one of the cosmic constituents?

I am inclined to take the view that salutations are to the highest and most exalted Suryanarayana, the Supreme Lord Vishnu who is meditated by practitioners of a certain form of yoga, as Immanent in the Solar Orb or Disc. That is also the fundamental quintessence of *Gayatri*. Additional corroborative light is thrown on the matter by the opening of the *Laghu Jataka*. Therein it is definitely stated that Lord Siva (three-eyed), salutes with folded hands some Supreme Power, morning and evening, at dawn and dusk marked by rising and setting of the Sun.

Whom does Lord Siva salute? It can never be any power inferior to him. It must be the Supreme Surayanarayana Himself. In concrete economic and political life, persons without any academic or other qualifications and attainments may occupy high official posts and these may be saluted by those who may be superior in qualifications. Such phenomena are quite common in the dispensation of ordinary human justice as manifested in social and political institutions created and fostered by contemporary civilization.

But, divine justice and divine schemes are completely free from such anomalies as are plentiful in human institutions. In the divinely-ordered scheme or cosmic plan (certainly more useful and more successful than the endless and interminable New Delhi plans) salutations are conveyed only by one ranking inferior to one ranking superior. It, therefore, follows that in the opinion of Varahamihira, Lord Siva offers salutations to Lord Suryanarayana. From this, it will be quite logically permissible to draw the inference that Varahamihira, was perhaps, a follower of the cult of Vaishnavism grounded on the absolute supremacy of Lord Vishnu.

This is a very important astrological affiliation to or of religion and theology. If, Sun, the life-giver be rather weak and ill-disposed in any chart, and if as a result the horoscopian be found suffering from diseases connected with low vitality, the remedy is usually suggested that devoted recitation of the thousand sacred names of Vishnu (*Vishnu sahasranama parayana*) should be done by the subject concerned, or, if that not be possible, the recitation should be got done by the family priest, or some near relation.

It is noteworthy that Bhattotpala, in his commentary, on *Laghu Jataka*, has very convincingly and authoritatively stated that in religious and theological convention built up through the ages, in this country, persons generally offer worship either to Lord Siva or to Lord Vishnu, Sri Narayana. In the present instance, as the author, Varahamihira has observed that even the exalted Lord Siva offers obedient salutations to Lord Narayana, it should follow, *a fortiori*, that other minor gods and deities naturally exist and carry out their allotted functions, under the direction and command of the Supreme Omnipotent Lord Narayana.

(3)

The theological supremacy of Vishnu emphasized by Varahamihira and his illustrious commentator Bhattotpala, has been argued elaborately, on the evidence furnished by the Upanishads and the Puranas, in religious and philosophical treatises.

The question of supremacy may be left alone for the moment. As Bhattotpala very rightly observes persons worship either Vishnu or Siva, in accordance with their temperamental inclinations developed in their minds as the result of Karma, done in previous lives. The Dhruvanadi specially mentions that this or that subject has been born in a family owing religious and theological allegiance either to Siva or to Vishnu.

Whatever modern scientists and rationalists may say, these births are by no means accidental, or fortuitous, or blind play, dance, or movement of atoms, or enzymes, or entities in the line. These births have been, it should be understood, planned and controlled in pursuance of some deep divine purpose, the nature and details of which can never be grasped and understood by the finite and limited intelligence of mankind, notwithstanding its success in launching Sputniks in space, with or without living creatures in them.

So, whether one gets, in the course of transmigrational cosmic allotment, birth as a lower animal, or a higher one, or, as a human being would all depend on the Karma of the individual, laws of which are administered by the Supreme Lord with serene and stern justice, with meaning-

ful and measured mercy as it were, with rigour and reason, and above all with love and grace.

The Dhruvanadi describes some births as occurring in families devoted to worship of Vishnu. Other births are listed as having occurred in families paying homage to Siva. Whether there are any congenital religious tendencies or theological predispositions, concomitant psychological leanings which render persons susceptible to approaches to Siva or Vishnu should be deemed an open question to which a summary answer cannot be given. The psychology of religious belief is a complex and complicated study, but, the ancient Indian saints and sages had done (definitely under divine direction and intuitional inspiration as I understand the matter) most of the study and thinking for the benefit of posterity and embodied their conclusions in their classical treatises.

In some cases, devotion to this or that deity appears in the most intense and concentrated form, bordering on fanaticism. In others belief and devotion are neutrally toned and lukewarm. In still others, religious and spiritual leanings happen to be merely formal and mechanically conventional. It is easily understood that different degrees of intensity in religious belief and devotion are directly traceable to and dependent on the strength of the planet or planets concerned. In regard to astrological affiliation, political fanaticism stands on the same level or plane as the religious type.

It should be interesting to investigate which planet dominantly determines devotion to Democracy and which devotion to Dictatorship, Nazi-ism, Fascism and so forth. Even in European and American systems of astrology, this problem does not seem to have been investigated. Could Communism thrive in America? Likewise, could Democracy thrive in Russia? Though professional politicians may give their own answers to such questions, the truth of the matter does not lie in that direction.

A Nation gets a form or pattern of Government which it deserves in consonance with its Karma, which, again, is indicated in some suitable planetary map erected for the political birth of that Nation.

There is no need to pursue the problem further, here, but, more vital and dynamic is astrological determination of religious and theistic loyalty. The Dhruvanadi does not always take the readers into confidence. The statements made are often dogmatic. Occasionally, charts are mapped, and specific events and circumstances are traced to their respective planetary affiliations or correlations. Charts straightaway commence with Nadi statement that individuals concerned are devotees of Siva or Vishnu, as the case may be.

As far as my investigations are concerned, the Dhruvanadi does not give any categorical clear-cut account affiliating or correlating different gods of the Hindu theological set-up to or with respective planets. I am putting this observation here with considerable caution and mental reservations as I have not been able to complete my studies, and as it is difficult to get the needed material. As a staunch believer in the statements of ancient Indian saints and sages, I feel no difficulty in accepting what the classics contain, though, under such limitations or conditions, carrying conviction to the minds of modern critics should be deemed vastly frustrational and highly uphill task.

(4)

It is, however, in the *Sutras of Jaimini* that direct and pointed reference has been made to specific planets and religio-theological affiliations to them. *Jaimini Sutras* have always been the hardest of nuts to crack. Luckily, understanding of the exact and correct significance of the apothegms of Jaimini has been facilitated by Prof. B. V. Raman's authoritative work and by the rendering of the text by Prof. Kar, both of which have now been before the public for some years past.

From my personal experience (obviously, I can talk only for myself) and from discussions with professional practitioners of astrology, and with non-professional academic-minded research workers, I have found that no professional astrologer has been utilising the methodology of Jaimini, in actual day-to-day pursuit of the business. Here and there, there may be some whose number can be counted on one's fingers who may be calculating longevity according to Jaimini and even using the system for other determinations. Still, I have a strong feeling that better and more accurate results may be obtained if the principles of Jaimini are increasingly pressed into service by professional practitioners of astrology. The task is undoubtedly difficult. It is also impossible to say if execution of such a difficult task would bring in sufficient or adequate remuneration, in these modern days, when a person can find out his weekly fate, fortune, or destiny, from the columns of a 2-annas or 3-annas paper. Other sheets claim to give you your *Daily Destiny*.

In aphorisms 72—80 (Chapter 1, Quarter 2) astrological affiliations are described of different theological loyalties and reactions. The author of the *sutras* proclaims his religious and theological leanings in the opening apothegm itself.

The apothegm begins with *Upadesa*. It is split into *U-pada* and *Isa*. Commentator Neelakantha explains that the first U—denotes Lord Siva, according to traditional single letter dictionary or lexicon. (*Ekakshara nighantu*). Jaimini begins his great work with a devotional salutation to Lord Siva. Whether the astrologer Jaimini is the same as the Jaimini of the system of *Poorva Meemamsa* is still considered by some to be a debatable question, an unsolved problem of chronology and personal identity. But, the obvious and palpable difference discernible between the two sets of sutras would strongly suggest the two sages should be deemed to be different from one another.

Be that as it may, astrologer Jaimini seems to be a person with theological leanings of Saiva complexion. Jaimini speaks of Brahma planet, Rudra planet, and Maheswara planet, and has laid down the conditions determining this designation. Sometimes, the terms Rudra and Parameswara are treated as synonymous. And Parameswara is Maheswara. If so, and if Rudra and Maheswara be taken to be synonymous, no place is found for Vishnu. And then, two Rudras are mentioned. Evidently, there seems to be no reference to two Brahmas. But wait. More than one approach would seem to have been indicated for the determination of Brahma planet.

Prof. B. V. Raman has made these matters abundantly clear, but, as his exposition had been undertaken from a different perspective, he has not dealt with theological implications and affiliations. It must be common knowledge that Jaimini lays pre-eminent emphasis on what he has described as the Atmakaraka planet which constitutes a basic and fundamental point of departure for astrological determinations and evaluations. The navamsa held or occupied by this basic or foundational planet is equally important. Jaimini goes on to explain that if the navamsa concerned be occupied by Ravi and Kethu, the person concerned would be a devotee of Lord Siva. If the Moon is in the said navamsa, devotion would be directed to the consort of Siva—Gouri or Parvathi. Lakshmi, the consort of Vishnu, becomes the object of devotional worship if Sukra held the said navamsa. Kuja or Angaraka found existing in the said position stands affiliated to worship of Skanda or Subrahmanya. Budha and Sani located in the concerned navamsa, would determine devotion to Vishnu. If Guru be the occupier of the navamsa, the divine couple, Siva and Parvati in aspect of union as Sambasiva would be the object of religious and theological devotion. Rahu, in the said position indicates devotion to certain spirits, devils and others in the line and to Durga. (In Mantra literature, regarded same as *Kali*, *Neela*, *Neela-Saraswathi* and so on.) Kethu in the position mentioned determines devotion to Ganesa and Subrahmanya or Skanda.

(5)

A perusal of this highly interesting list of religio-theological affiliations is bound to evoke different reflections in different minds. Some would contend that generally speaking, a person hardly worries about religious and theological loyalties. When any party approaches an astrologer, he or she almost always puts him questions concerning wealth, profession, luck, easy money, marriage and other values of happy and pleasurable existence. No question is ever put to the effect whether a horoscopian would develop to be a devotee of Siva or Skanda and so forth.

Others may hold that there is bound to be legitimate curiosity regarding the religious and spiritual development of an individual and that astrologers are also consulted by parents and others regarding the religious tendencies of subjects. I am not pursuing this discussion at any length, because, it would take me beyond the present scope of the contribution. Even in the present scientifically sophisticated age, there are persons orthdox, or religious-minded, or superstitious, if you like, who are anxious to know something from astrologers about their relations with family deities, and deities of choice made after mature metaphysical deliberations.

Particularly, when a party is found to be suffering long from some indefinable and inscrutable illness, or when a person is repeatedly assailed by ill-luck in most of his undertakings, it is common practice of the average Hindu to consult the family astrologer for light and guidance. Well-informed astrologers are sure to shed light on the question. They would say that the subject is under the displeasure of this or that deity, brought about by the performance, knowingly or unknowingly, of some sinful or prohibited deeds in this or previous lives. **The sufferings and diseases, etc., are the inheritance carefully preserved and safeguarded through the limitlesss expanse of Time and passed on to individuals in accordance with the law of Karma, by the Supreme Lord.** If the deity or deities concerned can be worshipped and propitiated in the prescribed manner, the sufferings would most likely disappear. Some such is the general situation. In other cases, persons are in the regular habit of worshipping this or that deity or deities, for the purpose of

obtaining success in life and worldly possessions.

Such religio-theological leanings and predispositions can never be sought to be dismissed as merely accidental or fortuitous. They are the outcome of the output of the Karma of individuals concerned. In certain highly perverted, rancorous and cantankerous specimen of persons, one would find resort to particular deities made for the purpose of getting rid of enemies and involving them in serious physical and mental ailments. These are typical of the black art or black magic practised throughout the world by evil-minded persons. Practising of this black art and adoption of counter-measures, curative and rehabilitative, go together. These are said to be very common in Malabar and adjoining places.

(6)

It is difficult to arrive at the full and complete significance of the affiliations mentioned by Jaimini, but, attempts should be made to get to the heart of the matter. While two planets are affiliated both to devotion centred on Siva and Vishnu, the other gods and deities stand affiliated to only one. Sambasiva is mentioned separately, in aspect of union of Siva and His consort, but, no such unified aspect has been listed in respect of Vishnu. Of course, there is Sita-Rama aspect or the Radha-Krishna aspect, or the Lakshmi-Narayana and Lakshmi-Narasimha and others. But, Jaimini has not given any planetary affiliation to mark these. As it is, the nine planets are distributed in affiliation to Siva, Vishnu, Gouri, Lakshmi, Skanda, Ganesa and Durga. While the sons of Gouri have been assigned their places in the religio-theological scheme, sons of Lakshmi seem to have been ignored.

The reasons and grounds, conditions and circumstances that must have guided in his selective choice are not apparent from the list given. Also, while other affiliations are marked by single planets, Ravi-Kethu and Sani-Budha are listed in combination to mark off devotion to Siva and Vishnu evidently, as standing superior to others. Gouri and Durga are mentioned separately. But, some of the works on the occult—Mantra-sastra—have taken the two to be in fact one and the same. Skanda is mentioned twice, once in affiliation with Kuja, and again, for the second time, in affiliation with Kethu. The expectation may be natural to find similar conditions obtaining in regard to Rahu and Sani.

But, these two planets get different affiliations, Sani being correlated with Vishnu and Rahu with Durga.

Further, it is found that Sun the centre of the planetary system is affiliated to Siva, but, the weakest planet Sani, has been indicated in affiliation to Vishnu. Not merely this. In combination with Sun, Kethu is shown to mark devotion to Lord Siva. Kethu functions similarly to Kuja. Thus, two very virile and strong planets are affiliated to Siva.

Conditions, on the other hand, seem to have been completely reversed, while indicating devotion to Vishnu. The planets affiliated are Budha and Sani. In the usual classification, Budha is taken as devoid of virility or potency. Sani also is taken to stand for old women bereft of all charms aad attractions. It may appear strange that these two weak and powerless planets have been chosen to distinguish devotion to Lord Vishnu. Yet, there the affiliation stands. It should be well known that ordinarily 33 crores of gods and goddesses have been spoken of. Western critics and even some Eastern pandits used to laugh at the gigantic strength of the gods. They used to observe, (perhaps in fun) that at the time when some enterprising person or agency or organization took something like a census of the gods and arrived at the total strength of 33 crores, nothing wonderful at all happened.

Just at that time, the population of India stood at 33 crores, (now of course the strength has so vastly increased that Nehru and others are sternly and seriously advocating adoption of birth-control methodology), and urged by the oriental spirit of over-statement or exaggeration, some one glorified out of courtesy and urbanity of manners and social relationship, the 33 crores of inhabitants, into as many gods. Evidently, on the basis of some such exaggerated imaginational poetic imagery or symbolism, thinkers like Bharati, have enthusiastically claimed that each citizen is the king of the country, and that all are, thus, kings, though God knows the said kingship vanishes into empty nothingness, the moment, the poor deluded citizen puts his marked voting paper into the ballot box.

Whatever the reason that might have impelled Jaimini to have arrived at the conclusions he has, religio-theological loyalty and allegiance has been confined to seven deities. In a way, it is also fairly clear which side Jaimini would take in the matter of the endless and interminable controversies ranging round the question of the supremacy of Siva or Vishnu. The opening benedictory apothegm, and the affiliation of the centre of the solar system, Sun, to Siva would immediately suggest the preferences of the author. It would be permissible to infer

(Continued on page 95)

*Foreknowledge and Hypotheses of "Time-Curvature"

BY PROF. C. T. K. CHARI, M.A., PH.D.
(*Madras Christian College, Tambaram*)

PRECOGNITION or foreknowledge is so baffling a problem that one casts about for some hypothesis, however far-fetched or incredible, in confronting it. P.D. Ouspensky's queer hypothesis of a "circular time" and "recurrent events" naturally presents itself to us. In his *Tertium Organum*, Ouspensky advances the hypothesis that our "time-sense" is an "imperfectly developed space-sense". "The 'time-sense' is itself, in substance, the *limit* or the *surface* of our 'space-sense'. Where the 'space-sense' ends, there the 'time-sense' begins". It is in his book *A New Model of the Universe* that Ouspensky advances the hypothesis which has inspired one of J.B. Priestley's "Time Plays". Ouspensky says that we ordinarily think of the duration of a human life as a straight line or rather as a segment of a line, the two limiting points representing birth and death. May it not be a *curve?* A man may die in 1912 and find himself back in 1877. Precognition would then be merely memory. The pilgrim in time "remembers" the places he is going to visit; he has been there *before*, like Dr. Gortler in Priestley's play.

Is there any support for Ouspensky's notion of "time-curvature" in modern mathematical astronomy? Cosmological speculation about time along relativistic lines is still in too unsettled a state. Einstein's early "cylindrical model" posited three spatial dimensions belonging to a curved hypersphere and a fourth co-ordinate which is explicit, isolated, free from all disturbance. De Sitter's model shared with Einstein's a curved space, but it introduced a curved "hyperbolic" time instead of Einstein's "rectilinear" time. In this strange universe, time, for each observer, appears to "stand still" at a "horizon"; the "slowing down", however, is apparent; everything goes on "normally" for an observer actually situated in the concerned region. Eventually it was recognized that the models of

C. T. K. CHARI

Einstein and De Sitter could be only the "limits" of an evolving universe. In postulating a universe in which the density of matter was not zero, Einstein introduced an arbitrary, universal constant, the "cosmological constant". Eddington, Lemaitre and others demonstrated that the "constant" entailed a "repulsion" and, therefore, an "expansion" of the universe, proportionate to the distance from the point taken as the origin. Friedmann proved that a model whose spatial metric was a function of time could allow "expansion" even without the cosmological constant. Friedmann studied models in which the cosmological constant was zero, positive or negative, confining his attention, however, to spaces with a positive curvature. Heckmann considered cases in which the space curvature was zero, positive or negative. The "expanding models" are of two types according to the curvature of space. In one set (Type I), the radius increases continually from zero at some epoch tending to infinity after an infinite lapse of time. In the other set (Type II), the radius had a definite non-zero value when the "expansion" began. With a negative cosmological constant and *any* space curvature, we get "oscillating" models. With a constant of zero, we get either "oscillating" or "expanding" (Type I) models. With a positive "cosmological constant", we get either "expanding" (Types I and II) or "oscillating" models according to the space curvature. The accompanying table sets forth the possibilities:

There remains a few unorthodox models in which "time" is curved. Kurt Godel showed in the *Reviews of Modern Physics* that Einstein's field equations of gravity can yield solutions with *closed*, "time-like" lines. In this weird model, we cannot assume that time *increases* always as we move in a "time-like" direction; it is *possible* to "travel" into the "past" and "influence" it. Godel has cautioned us that the physical relevance of his model is far from demonstrated. Since the radius of the smallest "time-like" lines in it is of the same

*I am grateful to Mrs. Eileen Garrett and the Parapsychology Foundation for their encouragement.

Cosmological constant	*Space curvature*		
	Negative	*Zero*	*Positive*
Negative ...	Oscillating	Oscillating	Oscillating
Zero ...	Expanding I	Expanding I	Oscillating
Positive ...	Expanding I	Expanding I	Expanding I Expanding II Oscillating

magnitude as the world-radius in Einstein's static model, it is far from clear whether Godel's hypothesis, even theoretically solves the problem of precognition in a terrestrial frame of reference. B. Abramenko, in the *British Journal for the Philosophy of Science*, has explored the possibility of an "elliptic time". But the effects of "time curvature", in this model, are "usually insignificant" and become noticeable only at "large distances and long intervals". Precognition does not seem to require these long distances to time-intervals. In the *Journal of Parapsychology*, recently, the Dutch astro-physicist J. M. J. Kooy has dwelt on the implications of a hypersphere on which *both* space and time are curved. I have commented on Kooy's hypothesis in the same Journal (*J. Parapsychology*, March 1958, Pp. 40–54). I am afraid that Kooy fails to make clear how the "curvature of time" solves the problem of foreknowledge. One wonders whether the whole hypothesis of "time-curvature" is not a complication unwarranted by cosmology. Milne's "Kinematic Relativity" recognizes two scales of time. On one, time ranges from minus infinity to plus infinity; on the other, it has a definite origin at a certain epoch. Motions of particles, on the second scale, are fundamentally irreversible; time has an "arrow" right from the start. The question of "time curvature" does not arise. In the "new cosmologies" of Bondi, Lyttelton, and Gold, matter is supposed to be continuously created to compensate for the "thinning out" produced by "expansion". Local decreases in entropy can occur. The overwhelming impression, again, is of a *temporal* universe. Pascaal Jordon offers us a Kaluza-Klein 5-dimensional model with a *variable* gravitational constant. Non-static solutions of the field equations provide for the birth of matter in the shape of giant super-novae.

Has quantum theory any bearing on hypotheses of "time-curvature"? Schroedinger argued, on general grounds, that *space* must be closed and finite in order that the wave equations describing the quantum-mechanical behaviour of matter may permit a discrete spectrum. This leaves the question of time unsettled. Martin Gutzwiller, in *Helv. Phys. Acta* (29, 1956), has investigated the Klein-Gordon, Maxwell and Dirac equations, as well as their quantization, in a 4-dimensional space-time continuum of constant curvature with *space-like* geodesics of *finite* length and *time-like* geodesics of *infinite* length. I do not see what support the hypothesis of "time-curvature" can find in current speculation or how precisely it solves the problem of foreknowledge.

READY FOR SALE

The Universe and the Heavens

By M. V. Ramakrishnan, M.A., L.T.

The book gives in simple non-technical language all that is known at the present day about the heavenly bodies giving the latest theories of an evolving and expanding Universe. Attempts have also been made to correlate ancient astrology with modern observations.

Though much of the matter in this book has already appeared years ago in THE ASTROLOGICAL MAGAZINE, the matter has been entirely rewritten to meet the needs of the layman, the University student, the astronomer and the astrologer.

An invaluable book that every lover of knowledge should possess.

Crown 1/8 size: Cloth Bound with attractive Jacket

Rs. 5.25 or Sh. 10/6 per copy. Postage Extra.

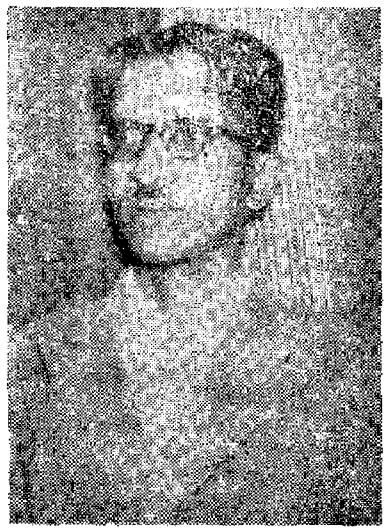
Interpretation of a Planet's Influence

BY DR. P. S. SASTRI, M.A., M.LITT., PH.D.

THE interpretation of a horoscope depends upon a proper interpretation of the nature of a planet and of the house in which it is situated in a given map. For a proper assessment one should calculate the six-fold strength of the planets and the strength of the various houses; and in undertaking to do that, one needs a handy method which can be found in the little volume *Graha and Bhava Balas* from the pen of the Editor of THE ASTROLOGICAL MAGAZINE. Apparently the planets and the houses may appear to be good or bad; but after calculating the actual strength of the houses and the planets, one will have a definite idea. Thus in the first chart[1] we find all planets excepting Sun and Mars appearing in a house in which they are not actually present. When the planets are presented in terms of the Bhavas, only Sun and Mars remain in their houses; and the rest have to be posited in the following houses. In order to interpret the nature of the results of the planets, one has to consider their Bhava positions after ascertaining their relative strength and weakness.

There is an unfortunate dispute amongst astrologers regarding the precise meaning of the term Bhava or cusp. Some take it to be the starting point, while others consider it to be the mid-point. Following the tradition and considering our experience, we are compelled to treat the degree on the cusp or Bhava as the *middle point* of the house. In this paper we are using for the sake of convenience, the terms Bhava, cusp and house as synonyms; and all the illustrations and interpretations are based on the Nirayana zodiac. Our preliminary principles are drawn mostly from Mantreswara with modifications.

A Bhava gives good results if it is occupied or aspected by a benefic, or by its own lord, or by the owner of a benefic house,



P. S. SASTRI

provided it has no kind of association with a malefic. This general statement needs qualification. It does not apply to a benefic aspecting from the degree of his debilitation or from an inimical sign.

When the trines and angles of a cusp are caused by natural benefics or by the benefics of the chart concerned, without any malefic association, that house becomes strong and highly effective. In the second chart[2] we find two powerful malefics in the 7th and 10th houses; and they are more or less on the same degree as the ascendant. This individual poisoned many persons and was finally executed. All the angles are marred in this case. Moreover, Mars has a square aspect on Saturn.

If the lord of a Bhava happens to be in the 6th, 8th or 12th house from that Bhava, or if he is in a depression or an inimical sign, the results will not be benefic. This principle has to be modified considerably when such a planet is associated with or aspected by a benefic, or is exalted. The third chart[3] provides a good illustration. Here the lord of the ascendant is in the eighth, and the lord of the eleventh is in the eighth from that. It was mostly in Saturn's period and later that he worked and established one of our very best Universities.

A Bhava becomes useless when it, its lord, and its significator are not strong and when they are associated with malefics only. This is a simple and self-evident principle.

The lord of the 8th house from a Bhava, the lord of the 22nd from drekkana from that cusp, and those situated in the 6th, 7th and 8th houses from that Bhava are likely to give malefic results as far as that Bhava is concerned. But malefics in the 3rd, 6th and

[1] Ascdt.-Aries 0° 46′; Kethu-Aries 28° 30′; Jupiter (R)-Cancer 21° 58′; Saturn (R)-Leo 18° 7′; Mars-Libra 3° 26′; Venus-Scorpio 28° 31′; Mercury-Sagittarius 28° 39′; Sun-Capricorn 8° 11′; Moon-Capricorn 19° 53′; and Mercury-Sagittarius 24° 53′.

[2] Ascdt.-Pisces 15°; Venus-Pisces 9°; Jupiter-Taurus 25°; Moon-Gemini 21°; Mars-Virgo 13°; Saturn-Sagittarius 16°; and Mercury and Sun-Capricorn 29°.

[3] Born on 25-12-1861 with Moon's Dasa at birth for 45 months. Ascdt.-Aries 5°; Kethu-Gemini 14°; Virgo-Saturn 2°; Jupiter 6°; Moon 18°; Scorpio-Mars 2°; Sagittarius-M.C. 3°; Sun 13°; and Aquarius-Venus 1°.

11th houses and benefics in the trines and angles of a bhava will bring about favourable results.

The cusp where the lord of the ascendant is posited becomes stronger for good or evil. Generally such a planet proves favourable to the house he is in. This provides a key to the entire nativity.

In any period of a planet, the results of his ownership of a Moolatrikona house are felt in full. The first half of the period will give the results of the ownership of the house that comes first as we proceed counting in a given map. Some hold the view that a planet in an odd sign will give first the results of his ownership of the odd house.

A planet in a bhava-sandhi, in the point when one house ends and another begins, is powerless.

The significators of the various bhavas, beginning with the ascendant, are : (*i*) Sun, (*ii*) Jupiter, (*iii*) Mars, (*iv*) Moon and Mercury, (*v*) Jupiter, (*vi*) Mars and Saturn, (*vii*) Venus, (*viii*) Saturn, (*ix*) Sun and Jupiter, (*x*) Jupiter, Sun, Mercury and Saturn, (*xi*) Jupiter, and (*xii*) Saturn.

These principles provide a general framework in attempting a tolerably correct interpretation of a chart. But in enunciating these principles, we have included the principle of aspects without explaining it. In what follows we propose to take up one planet for a critical examination, and to study its influence in the light of a certain horoscope. For obvious reasons, we begin with the first outer planet, Mars.

Authorities are not quite unanimous in their accounts regarding Mars. This planet confers leadership, impulsive nature, ingenuity, aggressiveness, passion and the like ; negatively it has something to do with shrewdness, determination, directness, secrecy, dynamism and loyalty.

In other words, the two signs owned by Mars seem to represent two aspects of this planet. Physical energy and achievement, ambition and satisfaction, ability to improvise on the spot and to be tenacious, stoical and enduring, passionate attachment and sincerity are some of the features denoted by the two signs. Mars can and does confer ability for pioneering, great fortitude and high ambitions ; and at the worst he does make one a blustering, self-centered, hot-tempered, and excitable individual. Not only can he make one courageous and resourceful, but vindictive. Mars indicates the ability to fight the way through life.

When Aries is very strong or dominant, we find one "forging his way through life with courage, daring, energy and initiative and enterprise". Referring to the third chart, we find that he is a pioneer whose life was guided by a single definite goal. He was always plain and direct, unable to use subtlety, though he was incisive. The fourth chart[4] is more significant in other ways. This is Mac Carthy who was assertive and aggressive and who cared precious little for the feelings of others. Mars is within ten degrees of the cusp of the descendant ; and the ascendant is subject to the saturnine and martian influences from either side. This accounts for his foolhardiness and churlish behaviour, for his egotism and pugnacity. Such an individual reveals his true self in the most hazardous of undertakings.

A strong Scorpio, on the other hand, brings forth the strange union of divergent trends in one's personality. The native appears to be at war within himself. There is an element of privacy and secretiveness. The depth of the feelings is striking here. One is passionately devoted to the cause he fights for ; and he detests what he cannot like. The hidden depths and the passions can make him either a lofty individual or a criminal. This dualism appears to be very striking in the fifth chart[5]. Mars conjunction Jupiter is in good opposition to Saturn. The 5th house is made to bear this brunt. While Aries is ardent and forceful, this sign tends to be deeply emotional. With a peculiar Mars, we find one with Scorpio rising in strength betraying deep resentments, jealousy and hatred of mankind. In other words, Mars too has a benefic side besides his malefic role. This is generally forgotten.

The general characteristics of Mars have to be modified in the light of the nature of the sign he occupies, the character of the house he is located in, and the aspects he receives. In Aries he makes one extremely assertive, aggressive and vigorous ; one acquires organising capacity ; he may become sensual ; he is powerful, inspiring, generous and careful to the extreme. Mars in Taurus makes one possessive and stubborn, and obstinately forceful ; one is liable to be influenced by the opposite sex. In Gemini he exhibits a love of the family, artistic and scientific tastes and aptitudes, ambitious and rash adventures, ingenious nature and tactlessness ; one becomes energetically talkative, or his force is frittered away. In Cancer he makes one strongly emotional and intuitive ; the individual tends to work for his family and home ; at times such a Mars makes one easily touchy.

---

[4] Born on 14-11-1908. Ascdt.-Aries 13° and Saturn 4° ; Rahu-Gemini 25° ; Moon-Leo 10° ; Jupiter-Virgo 11° ; Mars 23° and Venus 24° in Libra ; and Mercury 3° and Sun 22° in Scorpio.

[5] Born on 12-1-1893 with Saturn's period for 11 months. Ascdt.-Scorpio 1° ; Moon-Libra 24° ; Venus 3° and Mercury 12° in Sagittarius ; Sun 1° in Capricon ; Mars 18° and Jupiter 25° in Pisces ; and Saturn-Virgo 21°.

He can give surgical or medical skill, defective vision, and egotistic tendencies. In Leo there is a tendency to the occult, a desire to study mathematics and astronomy, regard for the elders, original thinking, nobility and restlessness; one is endowed with creative ability and strong purpose, or with a hot temper. In Virgo he makes one keen about 'taking trouble in every minute detail'; one becomes revengeful, self-conceited, self-confident, indiscriminate, boastful and pretentious. In Libra Mars is active; the individual becomes ambitious and self-confident; he has improved faculties of observation and understanding, he has foresight; he loves his family deeply, and is apt to be deceived by women; he is easily ruffled; his energy sways and he tends to quarrel with intimates since such an individual is apt to love solitude. In Scorpio we find deep and strong emotions and desires or an overstressed vengefulness; one is endowed with a powerful memory and the behaviour of a diplomat. In Sagittarius the native is gentlemanly, open and frank, indifferent or exacting, impatient and quarrelsome; he is 'all out for far-flung ideas and for cheerful ways of enjoyment'; he will be caustic in argument, boisterous and extravagant as well. In Capricorn he becomes vigorous and ambitious, plans systematically and works with success, and tends to care more for duty than for pleasure; he is generous, industrious and indefatigable, bold and tactful, gallant and influential. In Aquarius one becomes impulsive, combative and argumentative; he is contemplative and thoughtful, and is quick in forgiving and forgetting; he is 'determined in self-freedom to pursue chosen ends'; and he is endowed with a strong intelligence and scientific outlook. In Pisces one becomes selfless and self-sacrificing, having too many problems on hand; he is restless, exacting and faithful.

These indications are to be modified by the house-position of Mars. In the 1st house, the native shows great energy in tackling his personal affairs; he is at his best in starting new enterprises, and he is always active. In the 2nd house one is quarrelsome, extravagant and short-tempered; he becomes aggressive and unpopular; the powerful voice tends to become discordant. In the 3rd house one is keen to work at educational and literary pursuits; and he is involved in troubles arising from his brothers and sisters; he becomes courageous and intelligent, reckless and pioneering. In the 4th house he offers an unhappy home, quarrels and tyrannical behaviour; he struggles with energy and quickness. In the 5th one becomes fond of pleasures and games; but that is only an exterior in some cases; the native tends to be unprincipled, decisive, ambitious and preserving. In the 6th one is successful in all his undertakings, though he is worried because of some near relations; he is intelligent and powerful; he does hard and unstinting work and he expects the same thing from everybody else. In the seventh he is 'forceful in intimate relationships' and his partner tends to be combative and yet not so in reality; one becomes intelligent, tactless and stubborn with a few idiosyncracies. In the eighth the native may have to deal with the financial problems of others; he is deeply interested in psychic matters, and in surgery and psychology. In the ninth one has a fondness for travel, sport, and enjoyment; his interest in serious study gets deepened as he advances in years; he may be self-seeking; but he has an acute brain, and he is impetuous and logical. In the tenth one is a good founder or organiser of institutions, is energetic and adventurous; he is eager to get to the top and this makes him liable to suffer and cause harm to others. In the eleventh one exhibits a powerful mind which chooses a problem, and then he is at it systematically; he is quick to make friends, though he loses them equally quickly because of quarrelsomeness. In the twelfth he longs to work for the good of others; at times one acts secretly and in a harmful manner; one becomes capricious and wayward, narrow-minded and passionate, worried and despondent.

The next aspect of the problem refers to aspects. In the case of Mars we have found conjunction, opposition, square, trine and quincunx (150°) aspects to be highly effective. Unlike a few astrologers we do not take an aspect to be good because it is a trine or that it is bad because it is a square. The nature of the aspect depends on the natures of the planets, signs and houses involved in any given horoscope. As a result a trine aspect may really turn out to be a harmful one while a square may prove to be quite beneficial. This is particularly true of planets like Mars and Saturn. The foregoing two sets of indications are to be modified by the results suggested by the aspects to be detailed now. Here we have to note a few preliminaries. Any planet aspected by the Sun gets strengthened and is active. But one aspected by the Moon or by Mercury will tend to give something to the Moon or to Mercury. A planet aspected by Venus becomes softened and harmonised. One aspected by Mars is strongly enforced. One aspected by Jupiter acquires a wider scope and tends to become benefic. Saturn's aspect tends to make it limited and control-

led in its sphere of activity. Moreover one should also note the things for which Mars is the significator.

The conjunction of Mars with the Sun reveals the native to be highly energetic in asserting himself; he becomes strong, forceful, bold and hardworking; and he has an initiative. He may do at times undesirable deeds. But the energy is generally revealed in intellectual spheres. The conjunction indicates some physical injury. A good example is provided by Lenin who had Sun and Mars conjunction within eight degrees. Another is afforded by Dr. Pattabhi's chart where in Scorpio, in the 5th house, we find the conjunction of the Sun with Mars and Mercury.

A favourable or benefic aspect between Sun and Mars only intensifies these tendencies. Quick decision, alertness and ability are indicated. Personal dignity and self-control, patient-stoical endurance and the struggle for the well-being of mankind are also suggested. There can be no better illustration than the sixth chart.[6] There is a perfect trine here between Mars and Sun, and the native struggled and shed his blood for maintaining the integrity and unity of his country. Another illustration is provided by the seventh chart.[7] This is the famous mathematical physicist who struggled for the peace and well-being of man, besides revolutionising the concepts in the various sciences. Here Mars is sextile Sun. Another such sextile is offered by Tilak's map.[8]

An unfavourable aspect between Mars and Sun brings about an overstrain, pugnacity and short temper. The person is easily excitable, and risks in his love of hazardous undertakings. He lacks an impartial judgment; and he is on the lookout even for an intellectual combat. The Duke of Windsor has Mars square Sun, while Mussolini's Sun is square to Mars. These illustrations show that even an unfavourable aspect between Sun and Mars is not actually a malefic one.

The conjunction between Mars and Moon makes one robust, courageous and overactive. The native takes many risks. This is a healthy position for the two bodies, and they confer kindness and benevolence and a good combative spirit. The ninth chart[9] shows Moon and Mars within four degrees only. This is the chart of one who ruled as a dictator, and who yet retained a genial sense of humanity for a long time.

The favourable aspects between Moon and Mars bring about excellent physical and emotional strength and the ability to work. The unfavourable aspect between these two makes one moody or quarrelsome and violate the peace in the home. There is a favourable square between the two in Gandhi's horoscope, while an unfavourable trine exists in the ex-Kaiser's nativity. The trine operates between the 6th and the 10th houses. The unfavourable aspect at times brings about self-indulgence, obstinacy and unhappy marital relations.

The conjunction between Mars and Mercury makes the mind forceful and incisive. One becomes an expert in debate and in every physical activity. The controversial and disputative energies conferred by this conjunction make one virile and aggressive, sincere and bold. Cicero was said to have had this feature in his map. The tenth chart[10] shows Mars conjunction Mercury with opposition Saturn and trine Jupiter. Starting from an humble career, participating in a number of movements for independence, arguing with and convincing many he rose to the highest position in his country. The eleventh chart[11] shows the favourable square between Moon and Mars, and also Mars conjunction Mercury. The individual well illustrates the intellectual ability and earnestness with which he has been fighting for a good cause.

A favourable aspect between Mars and Mercury accentuates the qualities revealed by the conjunction. The native becomes powerful, courageous and enterprising. The mental faculties are invigorated; and he is alert and incisive. The native shines as a good author, and is fond of children. He has a fund of commonsense. In the seventh chart we find Mars sextile Mercury. Mussolini has a similar placing.

[6] Born on 12-2-1809 with Sun's period for 63 months. Ascdt. 16°, Sun 4°, M.C. 21° in Aquarius; Jupiter 2° and Venus 18° in Pisces; Kethu 15° in Aries; Mars 6° in Libra; Saturn 13° in Scorpio; and Moon 5° in Capricorn.

[7] Born on 14-3-1879 with Mercury's period for 95 months. Ascdt. 22° in Gemini; Moon 24° in Scorpio; Mars 6° and Rahu 11° in Capricorn; Jupiter 7° in Aquarius; and Sun 3°, M.C. 12°, Saturn 14° and Venus 26° in Pisces.

[8] Born on 23-7-1856 with Mercury's period for 13 years 9 months. Ascdt. 21°, Sun 10°, Venus 11° in Cancer; Mars 5° in Virgo; Jupiter 19°, Moon 19°, Rahu 29° in Pisces; and Saturn 17° and M.C. 23° in Gemini.

[9] Born on 29-7-1883. Ascdt. 28° and Rahu 14° in Libra; Saturn 15°, Moon 16° and Mars 20° in Taurus; Jupiter 26° and Venus in Gemini; and Sun and Mercury 13° in Cancer.

[10] Born on 3-12-1884 with Mars period for 62 months. Ascdt 26°, Mars 8° and Mercury 6° in Sagittarius; Moon 27° in Taurus; Saturn 1° in Gemini; Jupiter 15° in Leo; Rahu 20° in Virgo; Venus 15° in Libra; and Sun 21° in Scorpio.

[11] Ascdt. 13° in Aquarius; Rahu 23° in Pisces; Moon 24° and Saturn 10° in Taurus; Sun 23° in Cancer; Venus 2°, Mercury 14° and Mars 21° in Leo; and Jupiter 13° in Scorpio.

WORLD PREDICTIONS FOR 1959

(Continued from page 7)

neutral in sex, cruel in nature, violent in temperament, down-faced, rules aerial regions and quadrupeds and signifies Kshatriyas or the ruling classes. Saturn transits the arc of 12° 7′ to 13° 20′ Sagittarius (passing through the Vishanadi part of Moola constellation) from about 7th June 1959 to 16th June, and again from 18th November to 24th November. Moola is the constellation of knowledge. Therefore it occurs to us that during the period of Saturn's transit of the Vishanadi part of Moola, the world will come to know of the perfection of another nuclear weapon of immense destructive powers jointly by America and other friendly powers. This development will act as a powerful deterrent to the Communist threats of war. From the middle of April 1959 to about 20th of July 1959, both the major planets Saturn and Jupiter will be retrograde, the former in Sagittarius and the latter in Scorpio. It is again during this period that the cold-war between Russia and America will reach its peak point. As Jupiter is the King, however, statesmen will wisely conduct themselves and the crisis will be staved off. Another noteworthy feature is: Jupiter who will be at the beginning (0° 18′) of Scorpio on 20th July 1959, enters Sagittarius by 16th January 1960 covering an arc of 30° within about 180 days—he usually takes about one year to traverse this distance—so that he is subject to *athichara* or accelerated motion. This *athichara* having reference to the 3rd from the ruling sign of India and the 10th from the ruling sign of Russia, denotes confused thinking on the part of Indian leaders and grave political developments in Russia, resulting in the change of important members of the Russian Government. According to classical works when a benefic gets *athichara* motion, there will be "famine, affliction to rulers and unfavourable happenings all over the world".

There are only two solar eclipses during this year—an annular one on 8th April, not visible in India, and a total one on 2nd October, visible only in the Western part of the country. The eclipse of 8th April falls in 25th degree of Pisces and that of 2nd October falls in 16th degree of Virgo, the ruling sign of India. The Virgo eclipse is harmful to India indicating sudden developments in our relations with Pakistan, earthquakes in north-west part of the country diplomatic upsets and a generally anxious period. The critical period in Indo-Pakistan relations is between June and October. In Russia, the implications of the latter eclipse will be more seriously felt as it has reference to the eighth from the ruling sign. There will be intense struggle for power resulting in the overthrow of one of Mr. Khruschev's confidents. Even Mr. Khruschev's position itself may become insecure. Since the eclipse is caused by Rahu, the planet ruling Moslems, the Islamic countries will be considerably affected. Nasser's life is threatened. Tension will mount in the Middle East and America and Russia will again be on the brink of war. But hostilities will not break out. The only notable conjunctions during this year are: Mars and Rahu on 12th September, Mars and Jupiter on 29th December, and Mars and Saturn on 31st January 1960. The last conjunction occurring in the 21st degree of Sagittarius—the 8th from the Lagna in Indian Independence chart threatens serious railway accidents, outbreaks of fire, explosions and mining disasters. It is also likely that by sheer accident a nuclear bomb may drop down from a reconnoitering plane in the area of N.-W. Europe causing destruction to life and property.

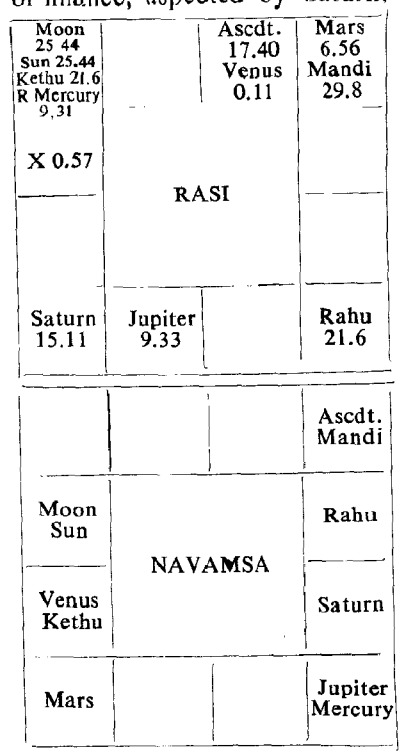
The dominance of Jupiter and the absence of Mars are no doubt indicative of a certain abatement of war mania, but Saturn's movements in Sagittarius and the jovian transit of Scorpio in a state of *athichara* emphasise increased military expenditures. In theory disarmament will be debated in conferences while in practice each nation will continue to arm herself to the teeth. The tendency during the year will be to destroy democracy and raise conservative forces under rightist authoritarianism. International complications will further multiply, and the United Nations will continue to perpetuate its own brand of international morality and it will hardly be able to influence the trend of world affairs for good. But despite disturbed conditions in different parts of the world, there will be no major war in 1959.

INDIA

The reigning cloud of this lunar year goes under the name of *Thamo*. Symbolically it is said to take its birth in the Western side of Meru. This implies increase of ill-health, general discontent amongst the masses, decrease of rainfall and multiplication of bad characters to the horrors of the innocent. Another peculiarity of the cloud being *Thamo* is that there will be many deaths by lightning and thunderstorms. Heavy rainfall will be centred on the seas and not on the land. As a consequence, the year will be noted for mishaps to a number of ships. The new year starts when Mars and Saturn are in mutual aspect—the former in the airy sign of Gemini. This disposition disturbs the atmosphere

producing heavy winds, storms, gales and rain. The last week of May would be noteworthy. Fierce storms may sweep the West Coast of India especially places lying between latitudes 15° to 21° causing considerable damage to shipping and life. The summer will no doubt be hot but deaths by sunstroke and heat waves will not be many. The atmosphere will be disturbed about the time of Saturn-Mars conjunction. There will be severe storms and gales. Many thunderstorms are produced around May due to a certain juxta-position of Mars and Jupiter. The period around the beginning of June is productive of vehement winds. People will be generally happy during the lunar months of Sravana and Bhadrapada. The price of linseed, rice, wheat, jaggery, sugar, cotton and maize will come down. Silver will however be very unsteady. Rainfall will be quite good. Several parts of U.P. and Bengal will suffer from floods and drought. The last part of the lunar month of Karthika will witness sudden shortage of foodstuffs and there will be unexpected rise in price-level. The prices of gold, silver, cotton, oil, butter and cloth will all go up during the lunar months of Margasira and Pushya. The winter will not be very cold but fair and mild as Mars will be aspecting Capricorn at the time of Makara Sankranti. During the lunar months of Magha and Phalguna there will be affliction to people. The crop outlook, on the whole, is quite good and food prices will register appreciative fluctuations.

At the beginning of the New Year, the 18th degree of Taurus rises at New Delhi while the meridian falls in the 1st degree of Aquarius. Venus lord of Lagna is in Lagna but in a *sandhi*. He is therefore not very strong. Lagna is aspected by Jupiter, lord of 8th and 11th. In the navamsa, Lagna is in Gemini aspected by Mars. It will be seen that Mars as lord of 7th and 12th is in the 2nd, or house of finance, aspected by Saturn,



a yogakaraka. And Mars in his turn aspects the 10th by his *Vishesa dristi*. The 10th lord Saturn is aspected by Mars, a maraka. The 5th or house of thinking, is afflicted by Rahu's situation & martian aspect. In the navamsa again, Lagna, 2nd, 3rd, 7th, 8th and 9th are all afflicted. All these combinations indicate that the year 1959 would be highly significant for India, demanding on the part of our leaders, great forethought, clear thinking and sound judgment, so that the difficult period ahead may be safely tided over. Stimulation due to the dominance of Mars will manifest chiefly as a surge of unrest and discontent of the people. The financial ills which beset the country will be partly surmounted with the help of foreign countries. America will of course be a big contributor. Though India will not fully extend her support to the 'Free World' in international conferences, there will be no drop in practical sympathy. The 'core' of the plan will be further reduced. As both Mars and Saturn have to do with the house of finance, Government will find additional funds by way of fresh taxations. But the business community will not be hard-hit. Jupiter the planet of realism aspects Mercury lord of the 2nd. Obviously a more realistic policy over a wide-field ranging from taxation to imports will be formulated. Mercury is exalted in Virgo navamsa and is in the constellation of yogakaraka Saturn. Therefore it occurs to us that the whole gamut of fiscal policy will receive some sort of re-orientation and hindrances to capital formation and new investments will be reduced and some of the existing restrictions on industrial expansion will be scrapped. The house of communications as well as its lord are aspected by Jupiter, though the lord is in the 12th bhava. Rail and air traffic will increase but there will be at least two serious accidents—one about the time Mars transits Gemini aspecting Rahu and the other at the time of Mars–Saturn conjunction in January 1960. Newsprint position will improve and the Press in general will continue to be free and unfettered. The lure of land reforms and tenancy legislation which were easy steps for the success of the ruling party during the last elections will give place for a more sensible approach to the agrarian problem. This is warranted by the fact that the 4th house falls in Leo and the 4th lord, an aristocratic planet, is aspected by Jupiter. The Sun is not altogether favourable in navamsa, so that occasional clashes between landlords

and tenants especially in Tamilnad and Behar cannot be ruled out. The mutual *samasapthaka* dispositions of Saturn the planet of labour, and Mars, the planet of strife throw the labour situation all over the country to a state of confusion. Workers' grievances will be exploited by the so-called leaders and an atmosphere heavily charged with political prejudices created. Bullies will dominate the labour movement. Close on the heels of Saturn–Sun conjunction, Mars-Saturn parallel, and Saturn-Mars conjunction strikes are likely to be declared in textile mills, mining industries and plantation and communication centres. Violence will be let loose by strikers. Export earnings will be affected. As Jupiter happens to be the King of the year, the working class will lose the sympathy of the public. Increase in juvenile delinquency, mass-student demonstrations and outbreaks of peculiar forms of children's diseases are all shown due to Rahu's presence in the 5th.

Of particular interest to India is the pattern of events indicated by the mutual aspects of Saturn and Mars involving the 7th, 8th, 12th and 2nd houses and the martian aspect on the 10th and the situation of Rahu in the 5th —the ruling sign of India. All the malefic influences are centred on Kanya and throughout the year Rahu in Kanya will be subjected to Saturn's aspect. In September 1959, Mars also transits Kanya and will be in conjunction with Rahu by about the 12th. These influences denote a particularly difficult and anxious period for our country. Inspite of best attempts on the part of our leaders, Pakistan will show increased militancy towards India and the danger of war becomes more real. The Indian Government should be on the alert. Rahu in the 5th denotes confused thinking, lack of vision and a complacent attitude. Therefore it is all the more necessary that we should be fully prepared to meet any emergency. Government attitude of apparent indifference will provoke the people into demonstrations, Satyagraha, etc., in several parts of the country.

The 7th house rules foreign relations and it is occupied by Jupiter. The 7th lord happens to be Mars and he is in Gemini aspected by Saturn from the war-like sign Sagittarius. Obviously, Mr. Nehru's foreign policy no doubt becomes more realistic. In theory he will continue to stick to his *neutralism* but in actual practice he will definitely veer more and more towards Western democracies. With the Communist block our relations will not be quite cordial, though paradoxically our diplomats will weary themselves to put out the point of view of the Communist nations. It is in our relations with the Moslem powers that we will get disillusioned because of Rahu's transit of Kanya. The Kashmir issue will again be raked up in the U.N.O. and the attitude of Islamic powers will not be quite helpful. On the whole our role in world affairs would be constructive, soothing and helpful.

The 10th house in a national chart has reference to the Government, head of the State and the constitution. We have already shown above that the 10th and the 10th lord are both afflicted considerably by Mars. This affliction reveals that the Government would be obliged to assume certain special powers to deal with certain national emergencies. The Constitution will be further amended. There will be a significant shake-up in the Central Government and certain senior leaders may relinquish office. Even the President may have to step down due to health reasons and the new incumbent would be a Congressman. As Mr. Nehru has been passing through the sub-period of Saturn (a maraka planet) in the major period of Rahu, it is likely that he may also threaten resignation close on the heels of Saturn-Mars conjunction.

The traditional significance of houses as current in national astrology when applied to mundane horoscopes has been fairly borne out by experience. Judgment could, of course, be occasionally at fault and some predictions could fail as each house has several significations. We have already hinted that the 10th house is considerably afflicted due to the focussing of martian influences. For such a combination, classical works ascribe the following results:—"Military questions will arise. There will be war-like rumours. Some prominent person in Government circles dies or meets with a violent end. Assaults may be directed against persons in high places". We need not however assume a literal interpretation. As the 8th house is also unfavourably disposed, there will be two important deaths—one of a prominent personage in the scientific field and the other in the political field. Mars in the 2nd house aspected by Saturn exposes financial frauds involving one or two millionaires and strange doings will be reported in the business world. Even after eight years of planning, the country is still at the point from where it was started so far as food production is concerned. But this year nature will enable us to tide over the food crisis. The Sun's association with Kethu reveals that our Government would think of certain measures smacking of regimentation of the peasantry. But they will not succeed. Opportunistic compromises will perpetuate factionalism

and weaken the discipline in the Congress party's ranks to the point of utter demoralisation. Leo navamsa rising in Calcutta points to a reshuffling of the Bengal Cabinet. Pisces navamsa rises in Trivandrum aspected by Mars from the 10th, threatening confusion in communist ranks and the imposition of the President's rule. Both in Bengal and Kerala, labour will be in uproar with strikes paralysing different industries and national services. Agrarian troubles contribute their share of misery also. At Bangalore, Aries navamsa rises, the 10th being subject to Papakarthari Yoga and the fourth being afflicted by Rahu and Mars. It looks as though the Mysore Ministry will be reconstituted with a possible change of leadership, by about the time of Mars-Rahu conjunction in September. It will be noted that this conjunction occurs in Mesha navamsa. The inner contradictions of the ruling party will be more acute. It will be dominated by unprincipled cliques and its functioning will become more and more motivated by the greed for power and position of selfish individuals. Mysore, once known as the model State of India, will have completely fallen in line with the other Congress-governed States—factionalism, communalism, nepotism, all raising their ugly heads. Rahu's transit of Kanya is a signal for the rise of Muslim communalism. Despite all these troubles which threaten India during the year 1959, the disposition of Jupiter in the 7th and the inherent strength of the Indian Independence chart clearly indicate that the crisis could be tided over if our leaders, knowing full well in advance, the trend of events to happen, act more realistically and less idealistically in the matter of governing the country. Summing up the planetary influences for India: We will become more realistic in our foreign policy. The Central Cabinet will be reconstituted. The Constitution will be amended. The economic and political swing would be more towards the right. Some sort of a national emergency will be declared. Relations with Pakistan will deteriorate to the point of war. The food situation will ease. Fiscal policy will be remodelled. Foreign aid will flow in at a satisfactory pace. The Mars-Rahu and Mars-Saturn conjunctions threaten death of at least two important personages. Kerala, Mysore, Bengal, Gujerat, Orissa, U.P. and Punjab will be centres of tension where politics will be in confusion. The communist movement will receive a setback. The masses however will be more happy and contented.

The 5th degree of Taurus rising in Karachi the meridian being aspected by Mars and the 10th and 8th being afflicted in the navamsa are precursors of yet another catastrophe for the politically torn *Pakistan*. While some sort of stability will no doubt be brought about, the Pathans and the other fiercely jealous tribes will give lot of trouble to the administration. The navamsas rising at Delhi and Karachi are *dwirdwadasa*. This tempts the military regime to use the army adventurously and India is of course the sworn-enemy. Our Government will be confronted with a very difficult situation by the thoughtless rulers of Pakistan. We should be very careful, especially about the time of Mars-Rahu conjunction in Virgo. While India's relations with America will further improve, America will be very critical of Pakistan's conduct towards India. While almost on the verge of a showdown with India, America will dramatically intervene pulling up Pakistan and thus preventing an otherwise ugly development. The military dictatorship will however get popular support as the economic conditions of the masses will considerably improve. About the time of the solar eclipse in Aries, an anti-Ayub Khan plot, conceived to do away with the Dictator, will be discovered and nipped in the bud. At Dacca, the 28th degree of Taurus (Virgo navamsa) rises while the meridian falls in Aquarius navamsa in association with the Sun and Moon aspected by Saturn. Two benefics are in navamsa Lagna but both the 9th and 10th houses are afflicted. East Bengal becomes disturbed and the minorities will suffer misery and turmoil. We are sorry to have to say that Pakistan does not astrologically mate with India and consequently, friendship between the two countries is not at all possible, whatever be the nature of the Government. With other Islamic powers, Pakistan's relations will improve but she will not come out of any of her commitments with the Western powers. By the end of the year, General Ayub Khan is likely to be thrown out of power. This prediction is offered with reservation as the birth particulars of the Khan are not known.

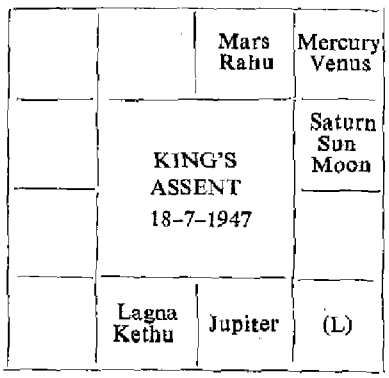
A state of virtual civil war may be witnessed in Ceylon by the time of Mars-Rahu conjunction, the Bandarnaike administration almost toppling down, unless Mr. Bandarnaike is wise enough to forestall such developments by firmness and tact. In Parliamentary debates there would be considerable show of violence. Aries navamsa rising at Colombo and Gemini rising at Delhi denote improvement in Indo-Ceylonese relations though the Tamils will be particularly discriminated against by the Government. There will be a scandal involving a well-known politician and the death of a prominent man is also shown. On the

(Continued on page 193)

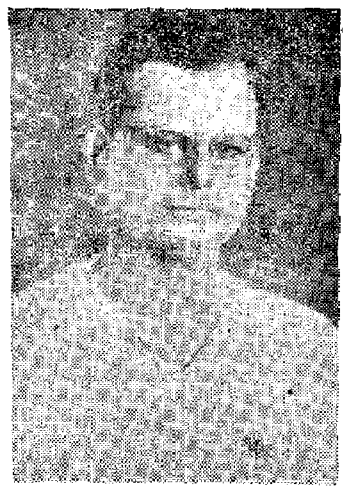
Foundation Map of Independent India

BY C. M. GHOSH

PONDERING the political, economic and cultural trends in India during the last eleven years against the background of planets in the two charts which can claim to be the Foundation Maps of Independent India, *viz.* (1) that cast for the moment of the King's assent to the Indian Independence Bill, and (2) that

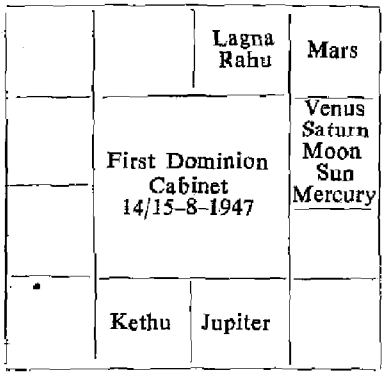


erected for the midnight of 14th/15th August 1947, I have come to the conclusion that it is the former that counts. *Prima facie*, one may be inclined to cast one's vote in favour of the latter in view of the ceremonial nature of the transactions that were associated with the swearing-in of the First Dominion Cabinet. But as every astrologer will admit, it is no use concentrating too much on the pomp and solemnity attending an event. A baby born in an obscure village may have his baptism or his first-feeding ceremony celebrated in a capital city with great eclat but this does not take from the importance of birth. That horoscope is reliable which *indicates* the native and there can be no other criteria of reliability. With the Royal assent to the Independence Bill the independence of India was a



C. M. GHOSH

fait accompli and the events that followed were merely empty ceremonies and dazzling pyrotechny. The Bill received the King's assent at 4-10 p.m.(I.S.T.) on 18-7-1947 and the chart cast for the moment is given below.



(L)—Ascendant at London.

The ascendant in New Delhi is 18 deg. 39 mins., Scorpio and the Moon occupied 5 deg. 40 mins., Cancer giving a balance of Dasa of Saturn 15 years, 8 months and 3 days. The other chart is also reproduced below for comparison.

At the time of the Royal asent, Scorpio rose in New Delhi and Virgo in London. Let us digress a bit and judge the chart with Virgo as the ascendant to get a picture of the situation from the British point of vantage. Virgo is the standing ascendant of India and it was therefore not for fun that this sign rose in London at a critical moment in Indo-British relations. The 3rd house stands for partition of property and in national astrology points to the partitioning of the country. Kethu, the cutter, occupies the 3rd house from Virgo indicating that this ancient country was to be cut up into Bharat and Pakistan. Mars, the significator of the British, and Rahu, the *karaka* (indicator) of the Moslems, occupy the 9th house—the house of fortune—indicating that the fate of Bharatvarsha of that moment depended on the pleasures of the British Government and the Moslem League. The significator of the Hindus, Mercury, is conjunct Venus in the 10th house, which suggests that the Hindus—in this case the Congress for all practical purposes—were too eager to

assume power and would agree to a bad bargain with a good grace.

Let us now consider the chart with Scorpio as the ascendant, this being the Foundation Map of Independent India as I see it. Kethu occupies the 1st house and points to the involved state of things in India since Independence. Kethu is a hybrid planet and eclecticism and mixed ideology have become the order of the day. A mixed economy; neutralism in foreign policy which has come to mean non-alignment with power blocs but all the same placating both the capitalist and the communist world for economic assistance and technical aid; a secular State even after the partitioning of the country on religious basis; reorganisation of States on linguistic basis and formation of bilingual Bombay. These may be ascribed to the presence of Kethu in Lagna.

The lord of the ascendant, Mars, indicates the people. The 7th house in national astrology stands for war and external affairs. The conjunction of Mars with Rahu in the 7th house points to our disputes with Pakistan over Kashmir and canal waters. This conjunction, though an unfortunate one, indicates that India's foreign policy hinges on her loves and quarrels with Britain and the Commonwealth countries and many of the Moslem countries which participated in the Bandung Conference. Neither the United States signified by Mercury, nor Soviet Russia, signified by Saturn, would appear to influence India's foreign policy except in so far as too much economic aid impinges on and reshapes it.

The first Five-Year Plan was launched in 1951 in Saturn/Venus. Venus, or rather Sukracharya, is the great planner of everything mundane and material. The 4th house stands for agriculture, land, mines, buildings and production and the 3rd house stands for rolling stock, transport and communications. The 3rd and 4th houses therefore comprehend the Five-Year Plans. The lord of these two houses, Saturn, is posited in the 9th house of long-term planning. The combination of Sun, Saturn and Moon in the 9th house indicates that the Five-Year Plans have been formulated with the sufferance of the rich, the poor and the middle classes. According to *Uttarakalamrita*, the 4th house stands for Rajya or State and as the fourth lord Saturn is connected with the tenth lord representing Government, the chart clearly indicates that the means of production are destined to be socially-owned. The socialistic pattern of society is fully revealed in this chart. It will be noted that during the time that *gochara* Saturn was heading for Scorpio and while it stayed in that sign, the Imperial Bank of India and Life Insurance business were nationalised and several State enterprises came into existence. As Saturn is the planet of reform its passage through the ascendant of the Foundation Chart brought about the reorganisation of the States on linguistic basis and the introduction of the decimal system of coinage.

The expenditure that the Government is incurring in order to accelerate the rate of industrial growth is beautifully revealed in this chart. The 2nd house stands for the national income and wealth, the Budget, the tax and non-tax revenues of the Government, Banks and financial institutions and stocks and shares. The lord of the 2nd house, Jupiter, is in the 12th house of expenditure. According to Hindu astrology, a benefic, particularly Jupiter, in the 12th house indicates spending lavishly on good deeds and social welfare. In national horoscope this position bespeaks the Welfare State. The position of the second lord Jupiter in the 12th or house of expenditure points to the revenue surplus and Central Bank credit or deficit financing that go to finance the enormous capital expenditure of the Government. It will be noted that Jupiter aspects the 4th house which indicates the Five-Year Plans.

The 8th house in national astrology stands for the exchequer and for loans and credits, both internal and foreign. The presence of the natural benefics Venus and Mercury in the 8th house immediately suggests that the Government have not been unfortunate in raising internal market loans and external loans and credits. Gemini rules the United States and its lord Mercury is also the lord of India's permanent ascendant Virgo. India can therefore confidently look forward not only to further institutional credits from the U.S.A. but also for huge Governmental loans sanctioned by the Congress. She can also hope for loans from Japan and other countries ruled by Venus. Upto now the loans and credits secured by India were mostly tied to specific projects but the U.S. Government loan which Mr. Morarji Desai is endeavouring to seek is intended to be an all-purpose loan required to meet the cost of imports of industrial raw materials and consumer goods even. * It would be better if this loan was secured before November 1958. Saturn would enter Sagittarius, the 2nd house of the national horoscope in November 1958 and aspect the 8th house making the procurement of the loan an uphill task. India can, however, always

* This article was received on 30-7-1958—*Ed., A.M.*

back on U.S. loans for pushing ahead with the Five-Year Plans. As Mars is in the seventh house of trade and has no connection with the eighth house of loans, much direct Governmental loans from the United Kingdom or even Western Germany may not be forthcoming. India could only expect private business investments and deferred payments terms from these two sources.

According to Hindu astrology, the second house stands for *Vikraya Vanijya* or sale transactions and the seventh house stands for *Kraya Vanijya* or purchases. While dealing with foreign countries, these two houses must necessarily stand for exports and imports respectively. Mars and Rahu occupy the house of imports. Mars stands for the produce of the earth (*Bhuphalitham*) meaning thereby cereals, and for minerals (*Khanija*). Mars also stands for machinery including electrical machinery, and military equipments. Rahu stands for iron and steel and manufacturers thereof. According to *Uttarakalamrita*, both Rahu and Mars stand for vehicles. Being deficit in foodgrains, India had been making considerable imports of wheat and rice for quite a long time. But as soon as the sub-period of Mars started from September 1956, the import of foodgrains jumped up and as Rahu is in association with Mars and should give the results of the latter to a great extent, heavy imports of foodgrains should continue well into 1960. In 1955-56, foodgrains imports were of the order of 0.4 million tons. The volume increased to 2.1 million tons in 1956-57 and 3.7 million tons in 1957-58. Imports of machinery, iron and steel manufactures, metals and transport equipment exceeded the estimated Second Plan average even during the first two years of the Plan. Whereas imports were valued at Rs. 751 crores in 1955-56, they were valued at Rs. 1,077 crores in 1956-57 and Rs. 1,174 crores in 1957-58. The import values may not show much signs of shrinkage until the sub-period of Jupiter is in progress. In a manner, however, the presence of two natural malefics in the house of imports has substantially blocked, during their sub-periods, the import of consumer goods. Only the imports of goods of which Rahu and Mars are *karakas* have gained momentum as already stated. It will be noted that whether in mundane astrology or in personal astrology, the planet who tenants a house affects it more visibly and strongly than the lord of the house.

The second house of *Vikraya Vanijya* indicates exports when the sales are made to foreign countries. The second lord, Jupiter, is in the twelfth house and therefore the general tendency of the export curve in Independent India would be to rise only gently under good planetary directions but to flatten out or even to slope downwards under bad aspects. The astrologer is not concerned with the fact that India's exports being traditional and development of new lines being not possible at the moment, her export trade cannot be developed to a desirable extent especially in view of the recent international recession and uncompetitive prices of India's export items. The astrologer is concerned with what has happened and what is likely to happen under the influence of the stars. Throughout the greater part of the first Five-Year Plan there had been a recurrent current account (trade balance plus invisibles plus donations) surplus in the balance of payments because at least upto 1954, the sub-period of Venus was in progress and Venus aspects the house of exports. Then came the sub-periods of the Sun and the Moon. These two planets though not aspecting the second house are yet not capable of damaging the second house which falls in Sagittarius. But the surplus on current account was sharply reversed during 1956-57 because afflicted Mars and Rahu are damaging to Sagittarius though not aspecting the sign. As the house of exports is aspected by Venus and Mercury, the main export items of India have been jute manufactures and cotton textiles. It is, of course, difficult to account for the heavy exports of tea unless this commodity comes under the influence of Venus which, I think, it does. The exports of manganese and mica which are *Khanija* are indicated by the eighth house aspect of Mars on the second house. But since the eighth house aspect is a very bad aspect, the future of these two export items may not be bright. The sub-period of Rahu started from November 1957 and will continue upto September 1960 and I wonder if the export trade will look up before that time. Over and above this, *gochara* Saturn is at the moment heading for Sagittarius, the second house of the Foundation Map. As a matter of fact, Saturn was in Sagittarius in February 1958 for a while and exports including re-exports touched a record low for nearly two years at Rs. 42 crores in that month. I conceive that during Saturn's stay in Sagittarius all export trade and all internal sales in commodities signified by Venus and Mercury would be in the doldrums. According to *Phaladeepika*, Venus stands for *Tantubaya* or weaver which in modern times must embrace the textile mill industry whether jute, cotton or synthetic fibre.

Foreign exchange may be consi-

dered in two aspects. Foreign loans and investment capital have been already dealt with. Foreign exchange earned through an export surplus is intimately connected with foreign trade. There is no guidance in text-books on mundane astrology as to the house wherefrom this subject is to be judged. I imagine it should be judged from two houses—the twelfth and the sixth. When we sell we earn foreign exchange and the eleventh from the second (income from sales) is the twelfth. When we buy we expend foreign exchange and the twelfth from the seventh (expenditure on imports or purchases) in the sixth. The second lord Jupiter is in the twelfth and this position indicates that our accumulated sterling balances have existed in a state of unstable equilibrium and are destined to be depleted in Independent India under appropriate planetary directions. This position is, however, extremely favourable for earning foreign exchange in beneficial sub-periods but for purposes of spending on nation-building activities. The somewhat rising trend in foreign exchange reserves noticed in 1955–56 was arrested and reversed in April 1956 and thereafter the reserves began to dwindle rapidly. The sub-period of Mars started from September 1956 and Mars is the lord of the 6th house. As already stated, this house indicates expenditure on imports. The sixth lord Mars is in the 7th house of imports in association with Rahu. This explains the heavy drainage of foreign exchange during the sub-periods of Mars and Rahu. At the moment, *i.e.* in July 1958, India's foreign exchange reserves stand at a little over Rs. 200 crores which would last only for a year considering the rate of depletion.

It is in the sub-period of Jupiter which starts from September 1960, that the export trade of India can hope to rally and the export surplus built up thereafter may be utilised to repay some of our foreign debts. Until that time, external loans and credits are about the only hope with which to finance the foreign counterpart of the capital requirements of the Second Plan. This is especially so because Venus, the lord of the 12th house (export earnings) is in 8th house suggesting that during the next two years we shall not earn much foreign exchange by exports and shall have to depend on foreign exchange loans.

The Reserve Bank of India (Amendment) Act 1956 while providing for the needed flexibility in note issue in deference to the requirements of economic development under the second Five-Year Plan, endowed the Bank with greater powers to restrain the creation of credit by commercial banks. According to *Uttarakalamrita*, the 9th house stands for circulation of currency and credit (*Dhanakshepam*)–(*Vide* English translation by Subrahmanya Sastri). The amendment was effected in July 1956 in the sub-period of the Moon. The lord of the 9th house, the Moon, is in its own house indicating monetary expansion. The Moon is conjunct Saturn suggesting restraint and second thought. These two planets are conjunct the Sun indicating that the Reserve Bank's (or Government's) policy thenceforward became one of controlled expansion.

The accent of the Second Plan has been on industrialisation. Although during the past several years industrial production has been evincing continuous signs of growth, the rate of increase slowed down perceptibly during 1957. As against an increase of 6.7 per cent in 1954, 8.1 per cent in 1955 and 8.6 per cent in 1956, it was only 3.2 per cent in 1957. It cannot be said that either Mars or Rahu were responsible for this decline in industrial activity. The deceleration in the rate of increase must be ascribed to transit Saturn heading for Sagittarius. Saturn had already been in Sagittarius wherefrom he aspected Aquarius, the 4th house from the ascendant of the Foundation Map. Sagittarius is also the 4th house from Virgo, the standing ascendant of India. Since, however, the effect of a transit planet is much less virulent than that of the dasa or anthara lord, we should not expect alround fall in production during the next two years. This is particularly so when it is granted that due to the heavy capital expenditure which has already gone into the building up of additional industrial capacity, the economy has gathered enough momentum to hold its own against adverse planetary influences. However, it appears that during the next two years the accent will shift to agriculture and mining from the manufacturing industries. Only those manufacturing industries are likely to gain on their past performance as are signified by Rahu and Saturn, *viz.*, iron and steel, agricultural implements (*Krishisadhana*), fertilizers, vegetable oils and such other products as are the results of induration and expression. Extractive industries of which Rahu or Saturn is the karaka, namely, iron ore, coal and other black minerals, petroleum and paraffin and black crops like sessamum are likely to make headway during the sub-period of Rahu. Destruction of agricultural produce due to natural calamities, mining disasters and fall in land values are some of the possible results during Saturn's transit in Sagittarius.

Rahu is the planet of demand, particularly of consumer demand,

and I imagine that the restriction on imports of consumer goods will be considerably relaxed to relieve the unemployment situation and to bring down retail prices.

From September 1960, the economy will be humming with activity and an export surplus may begin to be achieved assisted or not by devaluation of the rupee. There could be no devaluation during the sub-period of Rahu. The astrologer is not concerned with the pros and cons of devaluation. It is generally argued by the private sector that devaluation is necessary to meet the present foreign exchange crisis. The opponents of devaluation including Government at the moment feel that such a step will not be of much help at present in view of the Five-Year Plan and the international business recession and will only impair the prestige of the rupee overseas. The astrologer, however, does not see any astral indications suggesting devaluation during the sub-period of Rahu. It would appear that the 5th house stands for prices and Jupiter stands for the value of the currency. It is only in Jupiter's sub-period that devaluation may be effected because Jupiter is in the 12th house and in enemy's camp. Though devaluation tends to raise domestic prices *via* the higher costs of imports, the increase in production during Jupiter's subperiod may even bring down the prices.

The gold loan which is so much talked of nowadays and which could be of advantage to the balance of payments will hardly catch on with the public under the influence of Rahu. Jupiter, who aspects the 8th house, is the karaka of gold (vide *Uttarakalamrita)* and it is only in his sub-period that the public could respond to a gold loan. In Jupiter's subperiod which starts in September 1960, the export of rubber, tobacco and all other things signified by Jupiter will swell the export list.

It may be interesting here to touch on the economic recession which, originating in the United States, is spreading its tentacles around the world. Astrologers must have noted that the decline in production and rise in unemployment started in the United States and in almost all capitalistic countries when Saturn, from the third decanate of Scorpio, was heading for Sagittarius. The recession deepened during Saturn's so-journ in that sign and when it came back into Scorpio by retrograde motion there was a revival of business confidence and industrial production which had been declining without interruption since September 1957 in the United States turned upward in May 1958. Let us see what would happen when Saturn re-enters Sagittarius in November this year. There is good reason to believe that the trough of the usual ten/eleven year rhythm is bound to be very deep if it synchronises with the presence of Saturn in Sagittarius. The reason is that from Sagittarius which happens to be the 9th sign of the zodiac, it aspects the 3rd, 6th and 11th houses of the zodiac. The 3rd is the house of activity—business, military and mental. It is the house of transport and communications and indicates wagon and ship loadings. The 6th house indicates workers and employment. The 11th is the house of income. The 9th is the house of shipping and of general luck and an affliction to these houses simultaneously would bring out all the symptoms of a major trade depression. Over and above all these, the sign Virgo which receives the 10th house glance of Saturn stands for manufactures, banks, stock and commodity exchanges and industries in general (*vide* Hindu Predictive Astrology by B. V. Raman). The main factor is the presence of Saturn in the house of fortune. Any plans and expedients, however well thought out, are liable to walk awry at this time and misfortune dogs the people of the capitalist or what is now snobbishly called the "free world". The reason why the 1873 crisis which came just after Saturn had crossed Sagittarius and the depression of 1900 which occurred while Saturn was in that sign were not severe, as the slump of 1930, when Saturn was once again in Sagittarius was that upto that time technological progress had not been half as impressive as it became after the First World War. As prosperity and depression are the handmaidens of a capitalistic price economy which has now been supplanted by a planned economy and as the free world has learnt to act in unison in political and economic matters, it is hoped that the global slump this time will not result in dire economic want.

Let us again turn to the Foundation Map. The 6th house stands for labour and its lord Mars is in association with Rahu and aspects the lagna. Industrial peace is yet to be achieved in Independent India. Labour is cantankerous and on the war path. Mars is also the lord of the 1st house and it cannot be denied that in their legitimate demands as well as in their excesses the wages and salary-earning classes have secured the moral support of the people. The 6th is the house of employment and its association with Rahu is the cause of the grave unemployment problem with which the country is faced. Though employment is increasing unemployment is also

increasing and outpacing the former. Some relief in unemployment may be expected after Saturn leaves Scorpio. The relief may be the result of diversion of funds to labour intensive projects. The number of strikes and industrial disputes is likely to register a fall with Saturn's passage into Sagittarius.

The 7th house in national astrology stands for marriage and divorce besides international affairs, wars and disputes. The appropriate malefic conjunction in the 7th house has resulted in the recognition of divorce and penalisation of bigamy in Independent India. The relative legislation may have a salutary effect on modern Hindu community and will be commended by every sane and educated person and I am only placing before the readers the astrological justification for the state of affairs. The 1st house indicates caste. The presence of Kethu in lagna and the vitiation of the lord of the ascendant by Rahu point to the progressive secularisation of national culture since Independence.

Language is judged from the 2nd house. As Jupiter happens to be the lord of the 2nd house, the Constitution has laid down that Hindi written in Devanagari script shall be the official language of the Indian Union. 'The 2nd lord Jupiter also happens to be the 5th lord.' The 5th house is related to Vedic knowledge and traditional law (*Sruti* and *Smriti*) and therefore the possibility of Sanskrit becoming the official language cannot be overlooked.

I admit that the only facet of the Indian science which cannot be astrologically justified is the rapid growth of the population during the last decade. But the chart cast for the midnight of 14th/15th August 1947 also does not throw any light on the demographic scene.

It may be argued by some astrologers that the presence of Mars and Rahu in the 7th house should have instilled into the Indian people a Fascist tendency and India would have been in a conquering mood. I imagine that the prowess of Mars can be considerably abridged by Rahu. But it cannot be denied that the Indian people have become highly cross-grained during the last ten years.

It will be noted that border troubles have intensified during the sub-period of Rahu who aspects the lagna. Amicable settlement of all disputes with Pakistan may be expected in the sub-period of Jupiter or even earlier when Jupiter enters Scorpio in the beginning of 1959.

The 4th house stands for the voice of the people and for the Opposition in Parliament. It appears that during Saturn's stay in Sagittarius, the Opposition will curl up and become quiescent. I myself wonder how such a thing can happen but the stars point that way.

In the export market for industrial raw materials and semi-manufacturers, India should beware of Brazil and West Indies coming under Virgo and of Queensland and Transvaal influenced by Scorpio. These countries are liable to become India's greatest competitors in the years to come.

The economic picture in India does not appear to be very rosy during the next two or three years. Prices may remain high and there may be accumulation of stocks in some sectors and reduction in output in others. It is possible to visualise a situation wherein prices remain high but the evils of an acute depression afflict the community.

"Sri Rajeswari" :: BANGALORE-3

Gerentology and Ayurveda

BY K. M. TALGERI, M.A.

WHILE considerable progress has been reported in the field of gerentological research in the West in the deliberations of the recent international conference on gerentology at Basle, Switzerland, there has not emerged from it any sure scientific method of conquering old age. The problem still abounds in controversies. But the West today is beginning to take note of the marvellous researches of the famous Indian rejuvenation expert—Rajvaidya Ananda Swami. Some years back, this soft-spoken medical man hit the headlines of the world Press when 70-year-old Pandit Madan Mohan Malaviya, Mahatma Gandhi's close associate and Vice-Chancellor of Banaras University, underwent the famous *Kaya Kalpa* treatment and attained a second adolescence.

Friends who saw him after the treatment rubbed their eyes. They were puzzled, and rightly, for the erstwhile bent man had walked upright. His gait was springy. His face wore a youthful smile. The treatment, indeed, had wrought a miracle.

"There is nothing magical about this treatment," assured Rajvaidya Ananda Swami to the present writer in an interview at Delhi, "it is rational and in consonance with scientifically established laws of medicine. Only you are not aware of such laws."

This seemed a perfectly satisfying explanation to me, bred up as I am in the tradition of the allopathic system of medicine.

"Do you administer the same treatment to all persons?" I asked the expert. "No," he replied, "the treatment is suited to individual needs and is under my personal guidance, in order to avoid harmful complications during the internment." His patients include many Maharajas, Ministers and men from foreign lands.

An M.A. of Lahore University, Rajvaidya Ananda Swami speaks five languages, including Sanskrit and Persian, and has spent a considerable portion of his eventful life among the Yogis of the Himalayas. His selfless services in the cause of socio-cultural uplift of the masses is well-known.

He first established an Ayurvedic Research Centre at Delhi, and later on, at Kaya Kalpa Kanan in Ghaziabad in Uttar Pradesh, not far from India's capital city.

His researches have led him to several successful cures for many ills that human flesh is heir to tuberculosis, heart disease, asthma and so on. It was during his second visit to the Kulu Valley Mount Kailash, where he met his Guru that he evolved a series of simple kalpas (medical treatments).

"Why do you insist upon black goat's milk in your Aja Kalpa treatment?" I asked the doctor, a little puzzled. "I have discovered," he replied, "after much experimentation that the black goat in India is capable of eating practically everything, even the unclassified plants, and of producing milk that is full of nutriment." He added that this animal can thus be fed on the choicest herbs required for the rejuvenation treatment and the milk derived from the goat is again treated with other herbal and metallic concoctions.

The Aja Kalpa treatment was evolved after years of patient research by the Rajvaidya. The rejuvenation technique is simple enough for everyone to undertake. All that the patient has to do is to drink herb-treated goat's milk for 80 days.

"To the Western doctors our Ayurvedic methods may seem crude and fanciful, but the results prove otherwise," assured the Indian expert, and added, "indeed, the West has yet to realise fully the marvels of Ayurveda."

Research in Ayurveda has established the validity of the ancient theory of *Tridhatu*. The Tridhatu (three vital substances) are the inorganic components of the body fluids that regulate the metabolism in the system. The three organic constituents sustain normal tissue activity when in harmonious proportion and cause abnormal tissue activity when the balance is upset.

The object of Kaya Kalpa (from the Sanskrit word 'Kaya' meaning body and 'Kalpa' meaning transformation) is to restore the natural balance of the functions of these glands.

Rajvaidya Ananda Swami's researches in gerentology have been subjected to empirical tests and have re-established the truth of the ancient medical canons of Ayurveda. The immediate results of Kaya Kalpa treatment are often spectacular. The skin and the gait become elastic, grey hair turns dark, the eyesight and hearing improve and the muscles acquire athletic vigour. But the most remarkable change is the new buoyancy of mental life. Thus the whole system is regenerated.

Kaya Kalpa is not merely dieting, as many people suppose. It is really an art of combating old age. It covers the cure of a

whole range of human ailments, irrespective of one's age or sex, country or clime.

Until 1938, the idea of Kaya Kalpa was treated with ridicule. But after Pandit Malaviya and others successfully underwent the Kaya Kalpa treatment at the hands of Rajvaidya Ananda Swami, many doubters both in the West as well as in India woke up to the marvellous efficacy of Ayurveda.

There are two distinct methods of Kaya Kalpa, the Kuti Praveshik Kalpa and the Vatatapik Kalpa. The first is the sealed-cell treatment, the one that Sri Ananda Swami administered to Pt. Malaviya in 1938. It is an extremely elaborate, strenuous and expensive treatment. It needs great self-restraint and discipline to shut oneself up in a dark chamber, apparently defying all theories of modern science. Medicated black cow's milk is the only diet. Although a very difficult treatment, it is the surest method of attaining complete rejuvenation.

The Kuti treatment has also its varied aspects. In some treatments, the teeth and hair and nails fall off, only to be replaced by a new growth. In others, like the Soma Lata Kalpa, the patient becomes unconscious for days but emerges from the ordeal a new man.

Charaka enjoins that the rejuvenation treatment should be conducted under expert guidance of a very competent vaidya who should regard the patient as his own child.

The other form of treatment, namely, the Vatatapik (Vata—air and Atapa—sun) is much easier. In this form of Kalpa you can move about, do your normal duties, take the usual diet, but only avoid overstain and self-indulgence. This treatment may not be as spectacular as the Kuti method, but it tones up the entire human system.

Both treatments can be given either purely through herbs or through bhasmas (metallic preparations) and are administered to men and women alike. Generally these specifics act like catalytic agents. They accelerate the process of recuperation and cure a variety of ills. The Kuti treatment is given in winter, though in exceptional cases it may be arranged in cold places during the summer months. Kalpa season ordinarily starts in November and ends in March.

But the most essential of all the processes in any Kalpa treatment is the Pancha Karma, the preliminary purification. Ayurveda holds that it is the accumulation of toxins in the body that causes decay, old age and death. Vata, pitta and kapha are the three principles that sustain life. When any one of them is either sluggish or overactive, there is a disbalance which makes for illness. When Vata is too predominant, any food taken in turns into Vayu (wind) causing restlessness, dryness, high blood pressure, rheumatism, etc. With the predominance of Kapha (phlegm) much of the food is converted into phlegm and may cause asthma, bronchitis, tuberculosis, etc. Where Pitta is too strong, it may cause low blood pressure, acidity, bleeding piles, etc. These poisons must be eliminated and the balance in principles restored before one can expect to get back one's lost youth.

Ayurveda Shastra lays down that all rejuvenation treatments should begin with the Pancha Karma. Pancha Karma consists of five processes. They are Snehan, Swedan, Vaman, Virechan and Vasti.

Snehan is the lubricating process. Pure cow's ghee (in some cases, oil too) and boiling water are mixed together. This mixture is taken a few times a day for two to five days. In Swedan (meaning sweating), the person drinks a few cups of hot water and is given a brisk oil massage, inducing heavy perspiration. This is followed by a hot cup of cow's milk and a period of rest and then a bath in hot medicated water. Vaman literally means vomitting. Vomitting is induced under the strict supervision of the physician. Of all the five Karmas this is the most difficult, yet the most essential. Pitta (bile) and Kapha (phlegm) which are the root causes of old age are thrown out in abundance, making it possible for the Kalpa medicines to work thoroughly. Virechan (purging) comes next. This process of purging is gone through for the purpose of expelling mucous from the walls and membranes of the intestines. Purgatives have to be carefully chosen by the specialist. The last process of purification is Vasti. This is a yogic method of sucking in the medicine through the rectum. But very few can really do this. Enema is an easy substitute. Certain oils and herbal concoctions are used to cleanse the colon and the lower bowels.

Throughout the Pancha Karma treatment, the patient should have as much rest as possible, use warm water for all purposes, drink milk or take khichri (rice and pulse cooked together with plenty of ghee). After the Pancha Karma, a day's rest should be taken and then the Kalpa treatment should begin. The Kalpa medicine is usually taken from 40 to 80 days (or even from 6 to 12 months) depending on the nature of the ailments the patient starts with.

The Aja Kalpa is the simplest form of Kalpa. It is second

*The Horoscope of Queen Elizabeth II

A Criticism and Rectification

BY COUNTESS ZOE WASSILKO-SERECKI

THE nativity of Her Majesty Queen Elizabeth II is much disputed. First of all the hour of birth on the 21st April 1926 in London was not known at all; then it was said the birth happened "during the morning hours". Later on in Lady Peacock's book about Elizabeth's childhood and youth it was mentioned "she came at three o'clock". After the death of George VI, her father, Elizabeth's birth-time was published with 2h. 40m. a.m. That year, however, summer-time was introduced in England 3 days earlier on the 18th April. If we take this into consideration then the birth took place already at at 1h. 40m. a.m. (G.M.T.). The corresponding horoscope shows 21° Capricorn on the Ascendant and 26° Scorpio on the M.C. the latter being in conjunction with the heavily afflicted Saturn retrograde in 24° Scorpio giving a gloomy Saturnine touch to the horoscope, which would neither be in concord with the Queen's appearance and character nor her life upto now and which according to astrological tradition would point to a fatal destiny. If we do not bring the summer-time to bear upon the calculation the Ascendant will be 13° 40' Aquarius and the M.C. 10° Sagittarius. Here Saturn would be posited already deep in the IXth house without threatening the Queen's position like a sword of Damocles hanging over her head. In all remaining details which can be controlled thus for this horoscope is also in accordance with character and life of its noble proprietress.

How can we explain this discrepancy? The astrologer Walther Friedjung who is living in England does not see any difficulties in doing so, for it is quite possible that the personnel in the Queen's birth house had simply forgotten to advance the clocks. In England—as it is known—they say: patience and time bring all things about. Later on the birth-time probably will have been remembered numerically only by the family members and passed on without giving a thought to which time was correct. Or the birth-time was immediately transferred into world-time or another error has occurred. In any case Mr. Friedjung is already of my opinion due to the Queen's appearance only, that Queen Elizabeth's Ascendant is Aquarius and not Capricorn. This would be a blessing for the Queen as well as the whole world, for the horoscope of 1h. 40m. with Saturn culminating would undoubtedly crush its owner one day and shake the English throne, though English astrologers frantically endeavour to give the facts a new interpretation. They would have done better to publish such a horoscope of their Queen not at all, not even then if it were correct, which, however, it is not, thanks heaven! At 2h. 40m. there cannot be a question any more of such a disaster. So considerable can be the difference between two horoscopes if they are separated by only one hour!

Now we shall proceed to a critical investigation of both horoscopes. If Queen Elizabeth actually had the Ascendant in Capricorn and the Dragon's tail upon the Ascendant then she ought to have a bodily fault and a very disagreeable character. She would be egoistical, unemotional, tyrannical, earnest, gloomy, lonely, uncommunicative, ungracious, not charming, restrained and self-willed; on the other side, however, conscientious, thorough, reliable, industrious and orderly nearly up to pedantry. The square of the ruler of life, Saturn, to its lord Mars would be the infallible sign for cruelty and ruthless pursuit of ambitious aims exaggerated without measure (square Jupiter) and based on errors (square Neptune). This does not correspond with Queen Elizabeth's horoscope for obviously she possesses but a few of these attributes, the few good ones. We may add that she would never have had accession to the throne with Saturn on the M.C., let alone so young in years. For me this turned out to be the proof that this horoscope which—regrettable to mention—is already known very far cannot be Elizabeth's true nativity.

What now does the other horoscope reveal which I think is the true one and which I herewith submit to the readers for their own judgment. In the first line a highly complicated manyfold differentiated character caused by three zodiacal signs (Aquarius, Pisces, Aries) and quite a cluster of five planets (Mars, Jupiter, Venus, Uranus, Mercury) in the Ist house. These eight factors forming the essential fundamental parts of the character bestow an important personality upon the Queen, a personality composed of strong

* Translation by Curt Knupfer from "Tradition and Progress of Classical Astrology" a publication of the Austrian Astrological Society.

contrasts which still has great surprises in store for her surroundings. Elizabeth combines tradition and modern time (Jupiter in Aquarius) in her person ; she is a dignified (Jupiter) queen, conscious of her aims (Mars), full of activity and strong will-power(Mars) towards kindness (Jupiter). She will always take pains to use her great energy for social aims (Aquarius). The position of Saturn and its squares to the Mars-Jupiter conjunction are in this horoscope more effective in moral respect (IXth house) and give to the Queen an almost Puritan severety of the principles, as a consequence of which and from too much zeal she demands too much from herself as well as others persisting uncompromisingly in her opinion, although she is sometimes in error because Neptune from the VIIth lets appear the reality in a deceitful light. Seen from the side of fate this configuration will bring her personally painful disappointments from partners and as a ruler war like conflicts. Both will secretly be prepared a long time in advance and treason will play a part in it(Neptune square Saturn).

That part of the Queen's character which is not on the surface, into which to penetrate it is possible only for those for whom she has a great affection, is formed by the whole sign Pisces in the Ist house in which are posited the ruler of life Uranus and Venus. So as Jupiter in Aquarius symbolizes sovereignty in a modern mantle so Uranus in Pisces represents a progressive mind which is carried by the deepest faith (Uranus trine Saturn). Here again an apparent incompatible contradiction is harmonically solved! Venus in Pisces trine Pluto shows that Queen Elizabeth is able to love with complete devotion which is sufficiently proved by the time preceding her matrimony. In the other horoscope we should find Venus a short distance from the IInd cusp already where its personal influence hardly would be felt any more. Venus ruled by the afflicted Neptune however betrays that the poor noble woman will suffer a flood of secret grief which comes from her husband. This position of Venus renders her extremely sensitive and easily to be hurt, but also merciful, sympathetic, eager to help and gives her sympathy for other people's motions which is nearly mediumistic. Uranus conjunct Mercury proves the great intelligence and a fortunate combination of intuitive talents with practical brains. Mercury being in Aries already shows that her innermost character fortunately possesses sufficient optimistic initiative (Aries) so that Elizabeth guided by reasonable reflections (Mercury) over and over again will conquer the painful moods and try to encounter energetically the causes.

The Sun is posited in the middle of the IInd house at 0° 14′ Taurus emphasizing advantageously the material plane. His sextiles to Mars and Jupiter in I increase powerfully the Queen's innate gift for ruling and her self-conscious quite natural appearing attitude; the trine to Neptune in VII gives the nimbus with which the public opinion in England surrounds Elizabeth, the radiating brilliancy. This will probably have been helpful to get the chosen husband in spite of all the obstacles (Sun is the ruler of the VIIth !). But the main reason for this and the proper astrological cause of the young Queen's extraordinary popularity however is doubtless Moon in Leo, still in VI, but only 1 degree off the VIIth cusp. Her marriage with the Duke of Edinburgh then was actually the first great "popular festival" with a general levy in mass at the beginning of her career. At that time her progressed meridian was before the trine of the Sun on 0° Capricorn and in the time of the after-effect of this powerful direction lies also the birth of the Crown Prince whose Moon it is interesting to state is exactly conjunct with his mother's Sun which is another proof for the correctness of the whole horoscope. Besides the progressed Mercury that time was posited on the radical Sun, the promittor of the mentioned direction, and we must not overlook here that the Sun is ruled by Venus, the planet of love. When later on the progressed Ascendant reached the significator for children and lord of V, Mercury, Princess Anne was born. At the time of her father's death, on the 6th February 1952, her progressed Sun was opposed by Saturn and her Ascendant simultaneously sesquiquadrate Saturn in Aries and about to reach the trine to Moon at the time of coronation. And this is according to my view the final confirmation that Queen Elizabeth II's horoscope computed without summer-time is the right one, for this ceremony was also called the "Wedding with England", a ceremony in which partook the whole English people enthusiastically and which was celebrated all over the world. There is no more striking configuration for this event than the Moon on the cusp of the VIIth house in the royal sign Leo under the reign of the ruling Sun. A still better confirmation brings the *Coronation Horoscope* itself which has filled me with truly reverential amazement regarding the precision of cosmic interrelations.

When the Queen "sharp after 10 o'clock" (all following statements of time are given in summer-time) left the Buckingham Palace her radix Sun (8 minutes past 10 o'clock) was

culminating, her Venus of that day was culminating at 10 o'clock. And when at 12h. 32m. the Archbishop of Canterbury put the crown upon her head was Jupiter exactly on the M.C. During the homage the meridian advanced from Jupiter to the Sun which was posited in 11° Gemini, cusp of the IVth radix (royal origin) and then from the Sun (coronation for coming into power) to the trine of the Moon (goodwill of the people), the Moon reaching the Ascendant radix of the Queen at 3h. 20m., when everything was performed. Herewith the decisive word in the issue has been spoken, especially so if we consider that the direction for the coronation was Ascendant trine Moon. When Elizabeth at 1h. 45m. left Westminster Abbey as a crowned queen the Mars-Mercury conjunction was on the M.C. trining the Saturn-Neptune conjunction in Libra which so heavily overshadowed the whole year 1953, but also trining Elizabeth's Mars-Jupiter conjunction in Aquarius. On the 2nd June 1953 there was no opposition in the sky and only one square, that between Uranus and Saturn which could not be avoided due to its long duration. It was a day promising luck and blessings when in the moment of the young Elizabeth of England's coronation the 'royal trine' between Sun, Moon and Jupiter was elevated and consequently dominating in the sky. Has this day been selected by fate alone or was there perhaps an astrologer hidden backstage of this really grand staging? If so then a master in his profession. *

If we now look forward into the Queen's future then we may set our mind at rest, there are no bad directions due within reach of the eyes which would be of incisive consequences, although the years *1954–55 are not free of smaller difficulties, such of private nature included. Jupiter's present transit through the Vth house, the cusp of which receives a trine by Jupiter, may perhaps point to a third child next year. If, in November 1955, Saturn for the first time comes back to its radix position all astrologers with open eyes and a sound reasoning can go and see for themselves whether this comeback takes place in the IXth house or near midheaven. Either heavy conflicts with abroad or a dangerous threat to and diminution of her power will arise then. **

Uranus' transit over the Moon 1957 to 1959 (both celestial bodies are in radix in a sharp sesquiquadrate) will probably create a sudden overturn in the Queen's popularity through a matrimonial crisis and her own incautiousness. She will have to experience then that part of the people, which is incalculable always and everywhere, will suddenly turn against her. Nevertheless the favourable aspectation of the meridian in the Jupiter sign Sagittarius provides a good omen for Elizabeth's sovereignty. Its strongest aspect besides trine Mercury is trine Moon: "borne by popularity" could be the translation of this aspect. There is only one thing to upset the Queen's balance temporarily, conflicts of feelings (M.C. square Venus). That she is not only sovereign but a loving wife as well who is so very sensibly reacting upon disappointments, that will be the cross of her else so blessed life, for unfortunately the bright Moon of her VIIth is followed by the malicious Neptune. It also can be assumed that the Queen from personal reasons will resign in favour of her son in about twenty years.

He who needs still more support for Queen Elizabeth's Aquarian Ascendant may get it from the fantastically good horoscope of her son the Crown Prince Charles. This is as we may style it the best proof for the example for his birth hour fortunately is exactly known. With Leo Ascendant and Pluto in the Ist house trine Mars he is—not by rank alone—born a sovereign. The culminating Full Moon in Taurus, Xth house, means that he will receive his future power from the hands of his high-born mother (Moon sextile Uranus, trine Jupiter, trine Saturn), besides this Moon is in conjunction with the Queen's Sun, and as his Moon is unafflicted except for the relatively harmless opposition from Mercury and is posited in the rising node it may further be deduced *that his mother will neither meet with a sudden overturn nor any other grave disaster,* which would be unavoidable with Ascendant Capricorn on account of Saturn culminating.

---

* Later on I learnt that he is said to have been an American.

* This article was received on March 1954.—*Ed., A.M.*

** The long lasting difficulties on account of her sister Princess Margaret's marriage intentions, which have arisen in the meantime during Saturn's return (end 1955 and 1956) are clearly in favour of Saturn in IX because this house is the seventh from III. The full confirmation eventually is given through the conflict about the Suez Canal which happened later and abroad (Egypt), *i.e.*, in the IXth house and not on English territory. Additionally we must remark that Prime Minister Eden was born in 1897 and therefore will experience the second return of Saturn on the same zodiacal place as the Queen the first one. Through both these actual events it appears to me as good as proved that in Queen Elizabeth's horoscope Saturn is near the cusp of IX and not on the M.C.

We have taken the liberty to send this magazine with an English translation of this article to the office of the Queen's Court Marshal asking to submit it to Her Majesty so that the high-born who appears to be interested in astrology, might also set eyes upon a favourable conception and interpretation of her nativity.

In fact, we may count upon a good health, a long life and a normal death.

Contrary to the inconceivably wrong partial interpretations, regarding the horoscope of the Crown Prince, which have appeared hitherto I do not shrink from prognosticating *that Prince Charles will become one of the greatest kings in English history* who—listen and wonder—will not only rule his country "pro forma" but as an absolute sovereign rule in the truest sense of the word. Pluto in Leo confers the necessary mental energy on him. Above all Charles has the nature of a fighter and soldier. Generous, fervent, impulsive and with thirst for action which in the beginning will come to bear in the field of sports, self-conscious, courageous and daring he will hardly be able to wait until he can assist his mother with the governmental work. Actually his burning ambition will soon be satisfied, for with 17 years already (his horoscope has to be rectified by advancing it with one degree), when his progressed meridian has reached his Moon and with that his mother's Sun he will first of all be called as co-regent and five years later with trine Saturn accede to the throne of his fathers which is embedded in foundations firm as rock (Moon trine Saturn in earth signs) for his whole long life and still longer, for he will have successful sons too (Mars and Jupiter in Sagittarius in V).

In 1961 the Queen's progressed Ascendant will reach the Sun * and at the same time the Moon of the Crown Prince. Round about this time already which will bring a climax of personal success for the Queen—if she were not married we might feel inclined to prognosticate a marriage!—and indicate the beginning of sovereignty for the Crown Prince, one will behold mother and son together in public at the head of the state surrounded by the jubilant masses of people, for also Prince Charles popularity has been laid into his cradle; the good and strong Moon, the symbol of his mother to whom he is attached so deeply and whom one day he will have to thank for everything.

After looking into the secret plans of human destination the astrologer may confidently add his statement to the wishes of the young Queen of England's subjects, when they jubilantly greeted her after the coronation with "God save the Queen!": God has protected the young Queen.

* In this popular article it is only possible for me to quote the most important directions from the great number. Intentionally I confine myself to those of the progressed side because in this case here there are only slight differences regarding the key for timing and the computation is generally known.

STUDIES IN JAIMINI ASTROLOGY

By B. V. RAMAN

SECOND EDITION

This is the first attempt to present the complicated principles of Jaimini contained in all the four Adhyayas, is a simple, comprehensive and attractive manner, information being gathered from rare and difficult sources. Calculation and interpretation of Dasas suggested by Jaimini, which have hitherto remained obscure have, for the first time, been clearly expounded with suitable illustrations.

CONTENTS

Differences between Jaimini and Parasari; Distinctive Features of Jaimini; Importance of Karakamsa; Jaimini's Abstruseness; Significance and Determination of Karakas; Certain Exceptions; Different kinds of Lagnas; Pranapada and its Significance; Dwara and Bahya Rasis; Gulika; Finding Brahma, Rudra and Maheswara; Aspects and Argalas; Significance of Argalas; Source of Rasi Strength; Numerical Measure of Strength; Kinds of Dasas; Importance of Chara Dasa; Determination of the Order and Duration of Chara, Sthira, Brahma, Shula, Yogardha, Thrikona and Varnada Dasas; Longevity Determination; Increase and Decrease of Terms of life; Main and Sub-periods of Death; Horoscope Judgment, Physical and Mental Characteristics; Financial Prospects; Health and Disease; Education and Marriage; Combinations peculiar to Women; Karakamsa and Profession; Source and Nature of Death; Rajayogas according to Jaimini; Misfortunes and Miscellaneous Yogas; Timing Events by Chara Dasa; Nature of Results in Rasi Dasas; Maraka Periods for Parents, Self, Brothers, etc., according to Nirayana Shula Dasa; Summary.

Illustrated by two example Horoscopes. This is a book that no astrological student could afford to miss as this is the first time an attempt has ever been made to write a text-book exclusively based on Jaimini.

Crown 1/8 Size; Antique Paper; 196 Pages; Type Face—Clear and Bold; Cloth Bound

Planets and Their Gems

BY RAM DULAREY GUPTA, M.A.

PRECIOUS stones are often prescribed for Graha-shanti, *i.e.*, to appease adverse planets. What is the rationale of this prescription and how do gems act to affect the wearer, are problems worthy of serious consideration.

What strikes at the outest is that planets are said to have certain colours and gems of corresponding colours are usually prescribed to appease respective planets. Varahamihira, in Chapter II, verse 5 of his *Brihat Jataka*, describes the colours of the planets as below:

वर्णास्ताम्रसितातिरक्तहरितश्वापीत-
चित्रासिता ।
.....सूर्यादिनाथाः क्रमात् ॥

The colours of the Sun, the Moon, Mars, Mercury, Jupiter, Venus and Saturn are respectively dull red, white, deep red, green, yellow, variegated and dark. By actual observation with the naked eye we see that the colours of these planets respectively are deep red (the rising or setting Sun), soft white, dull red, greenish, yellow, brilliant white and blue. The following stones are, therefore, ascribed to the planets :—

Sl. No.	*Name of Planet*	*Colour*	*Name of gem in Sanskrit*	*English Equivalent*
1.	The Sun	Deep red	Manikya	Ruby
2.	The Moon	Soft white	Mukta	Pearl
3.	Mars	Dull red	Pravala	Coral
4.	Mercury	Greenish	Markata	Emerald
5.	Jupiter	Yellow	Pushyaraga	Topaz
6.	Venus	Brilliant white	Hiraka	Diamond
7.	Saturn	Blue	Neelamani	Sapphire

I am not at present taking into account Rahu and Kethu as they have no form or colour and do not actually exist in the heavens.

Now, colour, as we know it, is a perception of the human eye. All colour comes from the light of the Sun and is contained in it. And all light visible to the human eye consists of radiations vibrating on different wave-lengths. The spectrum has seven colours and each part of the spectrum has a different wave-length. Hugh Rice quoted in *Astrology and Modern Thought* says :

"Visible light includes wave-lengths of from about 7,700 Angstrom units (abbreviated "A") which is the limit at the red end to 3,600 A, the limit at the violet end. Beyond the red in the spectrum, the long waves are invisible to us but are appreciable as heat waves, and are called the infra-red. If the waves are shorter than 3,600 A, they are in the region of ultra-violet..... The Sun contains infra-red, visible and ultra-violet rays, but as to the short-wave side, there is a layer of ozone in the atmosphere, that cuts out all rays shorter than 2,700 A".[1]

1. Cf. B. V. Raman's *Astrology and Modern Thought*, page 32.

Planets do not possess their own light, but derive it from the Sun. They are, in fact, great reflectors which throw back a part of the light received by them from the Sun. It is just possible that the planets might transmute the light to some extent through their contact, and there might be some difference in the vibrations coming from them from those of the same colour coming from the Sun.

All light and colour thus reduce themselves to ethereal vibrations or radiations. In fact, these vibrations and radiations are the subtle form of energy from which all forms of life are created. Planets are in constant motion and their positions with reference to each other and with reference to the earth give rise to ever-changing patterns of energies which act and react upon each other. These patterns are the potent cause of creation and disintegration of life, affect human and animal behaviour and the earth itself.

Now, it is common knowledge that colours have a definite influence on the mind. The red arouses violent passions, of which the crudest exhibition can be seen in the bull when confronted with a red cloth. The white denotes purity and imparts serenity to the human mind. The green is extremely soothing to frayed nerves. The yellow is the colour of religion and invokes meditation. The blue is the colour of steadfastness and slows down all violence and tension. We also know from personal experience that garments of different colours produce different feelings in us, and that different colours are liked by different persons.

READY FOR SALE

NOTABLE HOROSCOPES

By B. V. RAMAN

A reliable guide to Practical Astrology

This does not contain startling predictions and amazing forecasts. But it is the product of investigations and studies by the Author presented here in an orderly and scientific form but in simple language easily understandable by the average reader.

One is born a beggar but becomes a ruler. One is born a ruler but becomes a beggar, How and why? What combinations make one a Scientist, Physicist, Chemist, Botanist, Poet, Politician, Statesman, Artist, Murderer, Dissimulator, etc.

Though several circumstances are the same for the rich and the poor alike, there will be certain astrological peculiarities in Notable Horoscopes (*e.g.*, Tagore, Nehru, Hitler, C. R. Das, Prof. Rao, Einstein, etc.) which are easily discernible and a careful study of which would enable one to acquire that practical knowledge and experience which is otherwise impossible.

This work shows that birth date and time are of supreme importance as determining not only character but also eventful periods of life.

The book contains the horoscopes of notable persons—their birth data, planetary positions, Dasas and Bhukthis in which important events have taken place in their lives. Then the various combinations which have produced different types of great men are carefully analysed with a view to showing to the readers, the practical application of Raja Yogas, Daridra Yogas and the like. The book also demonstrates the truth of Vimshottari Dasa.

SOME OF THE HOROSCOPES CONTAINED IN THE BOOK

Sri Krishna, Adi Sankara, Akbar, Alexander, Gautama Buddha, Jesus Christ, Prophet Mahomed, Augustus, Goethe, Aurangzeb, Gandhi, Ramakrishna Paramahamsa, Vivekananda, Tilak, B. Suryanarain Rao, Aurobindo Ghose, Ramana Maharshi, Sri Thyagaraja, Sri Vidyaranya, Rabindranath Tagore, Hitler, Mussolini, Abraham Lincoln, Subhas Bose, Jagadish Bose, Milton, Savarkar, Annie Besant, Bernard Shah, Godse, Stalin, Nehru, Eisenhower, Maotse-Tung, C. R. Das, Ashutosh Mukherjee, Sree Chaitanya, Karl Marx, Nero, Duke of Windsor, etc.

And also horoscopes illustrative of extreme religiousness, suicidal tendencies and certain other definite traits.

Raman Publications, "Sri Rajeswari", Bangalore-3

When ordinary colours can influence human minds through cloth, paint, etc., precious stones can certainly do the same to a much greater extent.

Out of the seven precious stones mentioned above, pearl and coral are formed in the depths of the sea and the remaining five in the bowels of the earth. They are formed under extraordinary circumstances most probably when the vibrations of a particular planet are the strongest. They are, in a way, batteries which store up the vibrations of various planets and release them when in contact with the human body. Or, they are highly magnetized receptive agents which collect planetary vibrations and transmit them to the human body.

There are diverse views regarding the *modus operandi* of these stones. Mihira of THE ASTROLOGICAL MAGAZINE fame, in reply to a question, expresses the following opinion:

"It is not with a view to strengthening a planet otherwise weak or afflicted that an astral gem is worn. The planet or planets remain always unaffected by our doings including the wearing of a gem. The object of wearing an appropriate gem is rather to render its otherwise malefic influence null by change of polarity in our physical and astral bodies so as not to be adversely affected. The wearing of a gem can be compared to the use of an umbrella by which we cut off the direct hot rays of the Sun or the drenching by a falling shower. The use of the umbrella neither influences the Sun or the rain nor is meant to do so". [2]

On the other hand, Nemichand Jain in his *Bhartiya Jyotisha* is of the opinion [3] that gems are worn to remove the deficiency caused by the weakness of planets. He takes the Moon as an example and says that those who have a weak Moon suffer from the deficiency of calcium. As pearl is made up of concentrated and refined calcium, this gem is prescribed to be worn in case of a weak Moon, and is supposed to remove this deficiency to some extent. Personally, I am inclined to the latter view.

The question then arises, when are the planets considered to be weak. There are detailed mathematical formulae to measure the strength of planets, but the following rough and ready methods may be found to be useful:—

(*a*) Planets in VI, VIII and XII houses are weak, though malefics in VI are said to be strong.

(*b*) Planets in debilitation or combustion or in inimical signs are weak.

(*c*) A planet which combines the defects mentioned in (*a*) and (*b*) above is doubly weak.

The planet which is the weakest in the horoscope needs to be strengthened by wearing the gem ascribed to that planet.

Some explanation is here needed as to why the planets are considered to be weak or strong with reference to particular houses. We know that the horoscope is a planetary map of the heavens for a particular time and with reference to a particular place on the earth. The twelve houses are the twelve divisions of the zodiac and are made with reference to the particular place on the earth for which the horoscope is constructed. These houses only denote certain angular positions with reference to the ascendant. Now, planets in certain angular positions, *e.g.*, Kendras and Konas are considered to be strong and benefic. This stands to reason, for planets in these houses are in a postion to cast their full or nearly-full rays on the native at the time of his birth. As human personality is made up of planetary vibrations, the influence of planets from these houses on the personality of the native is most marked and helps the native to attain success and happiness. The reverse is the case with the planets in VI, VIII and XII houses, and they are in a weak position to cast their rays or to exercise influence, and thus become malefic. The planets in II, III and XI houses are in an intermediate position, *i.e.*, neither strong nor weak.

The wearing of gems is recommended for the following considerations:—

(*a*) With reference to the birth horoscope;

(*b*) with reference to *gochara* or transit of planets;

(*c*) with reference to the Dasa and Bhukthi in operation; and

(*d*) with reference to the owner of the ascendant and/or the Moon-sign.

I have not yet come across any standard text laying down rules to define the procedure to recommend the wearing of gems. Some writers, however, have made a particular mention of precious stones while dealing with *gochara*, which leads to the conclution that they are perhaps inclined to treat *gochara* as the most important consideration in this respect.

The prescription of a gem with reference to the birth horoscope would be of life-long interest and value. For a planet which is weak in the horoscope needs support throughout the

[2] THE ASTROLOGICAL MAGAZINE, August 1958, page 773.

[3] Cf. Page 32 of the abovenamed book.

whole life. If the prescription is made on this basis, the gem would, to some extent, make up the deficiency caused by the weak planet in the mental and physical constitution of the person concerned. This gem will be worn throughout the whole life. For example, Mars in Gemini for a Cancer ascendant horoscope would require a coral to be worn throughout the whole life.

Gochara is the most prevalent consideration for which gems are recommended. Hindu Astrology recognises seven planets of which only Saturn and Jupiter are slow enough to justify the wearing of gems. Saturn stays in a sign for about 2½ years and Jupiter for about one year. Other planets are so fast-moving that their effects are ephemeral and of a passing interest. Saturn's gem (Neelamani) is usually prescribed during his transit through XII, I, II, IV and VIII Rasis from the Moon-sign. The transit through XII, I and II houses is termed as sadesati (7½ years). Of this period, too, the transit through Neecha and inimical Rasis is more malevolent. The general conception is that Saturn's transit during the last 2½ years of sadesati is the worst, but my experience is that the Rasi transitted would be the deciding factor. For example, the influence of the sadesati for persons possessing the Moon-sign Scorpio would be the worst during the middle 2½ years, and for those possessing Virgo as the Moon-sign the first 2½ years would be the worst. In such cases, a sapphire can be recommended to be worn for 2½ years or more as the case may be. Similarly, a gem to alleviate the sufferings caused by Jupiter is recommended when he is transitting I, III, IV, VI, VIII, X and XII Rasis from the Moon-sign. But I think topaz should particularly be recommended when Jupiter is passing through VI, VIII and XII Rasis from the Moon-sign.

The recommendation of a gem with reference to the Dasa and Bhukti is simple. When an adverse Dasa or Bhukti is operating, the gem governed by the planet concerned should be worn.

The recommendation of a suitable gem with reference to the owner of the Ascendant or the Moon-sign is also simple and needs no explanation.

Now, out of the four considerations given above, if one gem could be prescribed for two or more considerations, that would certainly be the best. Failing this, more than one gem may have to be worn. Or, gems may be changed from time to time, if worn for considerations of *gochara* and Dasa-Bhukti.

It is generally said that gems less than 3 *rattis* in weight should not be worn, as they are not sufficiently effective. This precept should be followed. The gem must be in contact with the skin. As far as the quality of a gem is concerned, jewellers of repute will have to be depended upon.

THREE HUNDRED IMPORTANT COMBINATIONS

BY B. V. RAMAN

This is not a collection of combinations but a careful selection of just the most important ones which cannot be easily identified in a horoscope.

What makes one a dunce? Why is one unhappy, what makes one poor and the other rich? Why one has no bodily comfort—what makes one a King or an equal, a leader, a business magnate, an industrialist, a great politician, a pauper, a sickly man and a miserable wretch? What makes one attain success without much effect and what makes the other to meet with disappointment in life inspite of his very best efforts?

A study of this book will enable you to easily judge the worth of your own horoscope and adjudge its merits and demerits.

A book of this type containing a collection of rare combinations some of which are special yogas has never been published before.

The author has illustrated the principles with innumerable horoscopes from practical lives. Do not fail to read this book.

Troinski's Tertiary Directions

TRANSLATED BY DR. S. N. DUTT

THE Secondary Direction is concerned with the secondary movement of the earth, *viz.*, its revolution round the Sun.

Its rule is: 1 day = 1 year.

The setting up of a Secondary Direction Horoscope is quite easy. If one wants to predict the events of the 40th year of a native's life, then a horoscope of the native is set up for the 40th day after the date of birth, and a comparison is made with the birth (radical) horoscope. Thus, according to the Secondary Directions, 1 day=1 year. The national horoscope of a state would thus show a regular rhythm after 365 years, but no such rhythm has yet been shown to exist in the events relating to any state.

In the case of the Tertiary Directions (TD), however, the Moon takes the place of the Sun:

One revolution of the Moon through the zodiac, or rather, one revolution of the Moon round the earth is equal to one day after birth.

The rule for TD runs thus:

"*One tropical lunar month after birth is equal to one solar day after birth.*"

In other words, each time the Moon, in its journey through the zodiac reaches the exact sign, degree and minute of the Radical Chart, we count one day from the date of birth.

We differentiate between the following months:

(1) The tropical month is the time between 2 consecutive passages of the Moon over the equinox (0° Mesha) = 27*d.* 7*h.* 43*m.* 4.7*s.* (The tropical revolution time of the earth round the Sun = 365*d.* 5*h.* 48*m.* 46*s.*)

(2) The sidereal month is the time that elapses till the Moon reaches again the same fixed star. It is the average revolution time of the Moon round the earth and is = 27*d.* 7*h.* 43*m.* 11.7*s.*

(3) The synodial month is the the time between 2 New Moons = 29*d.* 12*h.* 44*m.* 3*s.*

(4) The anomalistic month is the time taken by the Moon to return from its nearest point to the earth back to the same point again = 27*d.* 13*h.* 18*m.* 38*s.*

(5) The drakonitic month is the time required for the return

E. H. TROINSKI

of the Moon to the same Node = 27*d.* 5*h.* 5*m.* 36*s.*

(6) The solar month is 1/12th of a solar year = 30*d.* 10*h.* 19*m.* 4*s.*

(7) The calendar month = 28 to 31 days.

Here we are concerned only with the *tropical month.* It is equal to the time required by the Moon for one complete revolution round the earth, as well as one complete rotation on its own axis—for the time of its rotation is equal to the time of its revolution; that is, one day = one lunar month. This must be clearly borne in mind in connection with the Tertiary Directions, and should not be confused with the well-known synodial lunations which give rise to the synodial month.

Note: Tropical month = 27*d.* 7*h.* 43*m.* 4.7*s.*

Synodial month = 27*d.* 12*h.* 44*m.* 3*s.*

Rotation = Movement of a body on its own *axis.*

Revolution = Movement of a body on its own *orbit.*

If we equate the rotation of the Moon with that of the earth, we must use the tropical month. It is also logical to use the tropical year and the tropical month with the tropical zodiac.

The tropical month, which is the basis of TD, has an average length of 27*d.* 7*h.* 43*m.* 4.7*s.* But as the periodical disturbances of the lunar movement also count, the length of the tropical month varies temporarily slightly to above and below the average length of 27*d.* 7*h.* 43*m.* 4·7*s.*

In order therefore to save time in setting up a Tertiary Direction Horoscope (TDH), it is not advisable to work with the "average length", but to use the "Table for the Tropical Month" given in page 100 of *Das Weltshicksalsjahr, 1959.* With the help of this Table we are in a position to determine the *required date* for the TDH within a minute. A lunar horoscope (TDH) for the moment (of birth) may thus be set up in which the Moon attains the same longitude as in the radical (birth) horoscope, and in which the positions of the Sun and other planets on that particular date for the TDH are set out. As in the case of the SDH, the TDH is also set up for the *local time* of the birth place, and for the birth place

(latitude). For any date in between two tropical months, the exact Moon's position for that date should be inserted.

The number of (tropical) months elapsed since birth represents the number of calendar days which must be added to the date of birth to arrive at the date for TDH.

If an event, for which a TDH is to be set up, does not fall quite close to the date of birth, then with the help of an Ephemeris, the *number* of months elapsed between the date of birth and the event in question may easily be determined, and this *number* will represent the number of days to be added to the date of birth. In the absence of an Ephemeris, you may use the "Supplementary Table for Tropical months" given on page 101 of the book *Das Weltshicksalsjahr, 1959*.

In adding the number of days thus arrived at, to the date of birth for determining the date for the TDH to be set up, one must remember that the ordinary year has 365 days whereas the leap year has 366 days—(with the exception of the years 1700, 1800 and 1900). So in adding the number of days, one day should be deducted for each leap year. In adding the number of days thus determined to the date of birth, the use of the "Table for Tropical months" (p. 100) together with the Table for year-numbers (p. 102, *Tafel der Jahreszahlen*) ensures a speedy and correct determination of the date for the TDH.

The time for the TDH is the the same as that for the Radical Chart.

It should also be noted that in the cases of Primary and Secondary Directions, the Ascendant travels only 1° (on an average) for each year. When the native attains the age of 90 years, the Ascendant of the PDH moves through 3 signs of the zodiac, and the Secondary Ascendant through 2 to 4 signs at the most. On the other hand, in the case of Moon Directions (*i.e.*, TD), the Ascendant moves through the whole of the zodiac once in 27 years; exactly so many years and months (*27y. 4m.*) as the lunar days and hours (*27d. 8h.*) are required for the Moon to go through the 12 zodiacal signs.

How to set up a Tertiary Direction Horoscope (TDH)

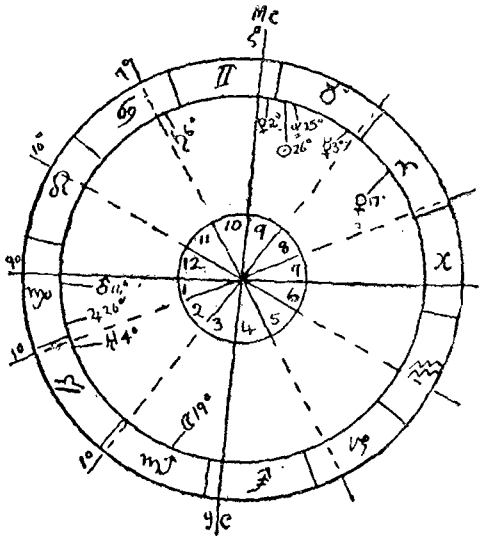
For the purpose of setting up a TDH, we require the following:—

1. An Ephemeris.
2. A Table of Houses for the birth place.
3. Table for Tropical months (compiled by Troinski).
4. Table for year-numbers (compiled by Troinski).
5. Usual birth data.

Example:

Let us set up the TDH of Hitler for the event of his death on 30th April 1945.

He was born on 20–4–1899 at *18h. 30m.* Local Time (Braunau) Radical Moon = 6°38′ Capricorn:



As per rule Tertiary Directions—

"One tropical month after birth = 1 day after birth" or in other words, "each time the Moon attains the exact longitude in the Radical Chart, we add one day to the date of birth"—we have to find out how many times Hitler's Radical Moon passed its radical position (6° 38′ Capricorn) upto *April 1945. For this purpose we use the "Table for Tropical months."

By the end of April 1945, Hitler was 56 years old. From the *Table for tropical months* we find that during the past 56 years +Ca. 12 days, the Moon has completed 749 revolutions. We would like to know whether the Moon was *actually* at 6° 38′ Capricorn, 56 years and 12 days after the birth, *i.e.*, on 2nd May 1945, and on consulting the Ephemeris we find that it is so. Now we equate these 749 lunar revolutions with 749 days, and count 749 days from the date of birth (*i.e.*, from 20th April 1889).

In order to simplify the calculation of the date for the TDH, we use the Table for year-numbers. The number given for 20th April is 110. So we add 110 to 749 days. The result is

(Continued on page 130)

*1945
1839

56 years
56y. = 749 tropical months.
= 749 days
730 days (2 years)

19 days

749 days = 2 years + 19 days
from 20–4–1889 = 9–5–1891
56 years = 749 (p. 100)
+110 (p. 102) = 20th April

859
−730 (2 years) : 1889 + 2–18

129 (p. 102) = 9th May

Hence the date for TDH
= 9th May 1891 : *18h. 30m.* L.T. (Braunau)

Scientific Attitude Towards Astrology

BY PROF. OM PRAKASHA KAHOL, M.Sc., B.T.
PRESIDENT, INDIAN ASTRONOMICAL ASSOCIATION

THE hostility between astronomers and astrologers has reached a pitch that conciliation between these two classes of savants appears to be well-nigh impossible now. Both have adopted such still-necked attitudes that even those, who plead for evolving some kind of a meeting ground between them, are hated by both and in such an atmosphere, the first casualty is the scientific spirit of enquiry. Some two years back, when we brought into existence the *Indian Astronomical Association*, we had the worst experience of the hostility between votaries of astronomy and astrology. There was a proposal to include astrology among the subjects of study, with which the Association should concern itself. It was to be just one among half-a-dozen other subjects like astro-physics, astro-nautics, astro-biology, etc. In India, where ancient sciences are inextricably mixed up with astrology, it was not possible to exclude it from the list of subjects under investigation, unless it was agreed to leave all Indian sciences out of consideration. And then it was never stipulated that astrology would only be supported blindly, and not repudiated, by the Association. The purpose of including astrology was to assess its worth objectively. But the proposal provoked such a storm of opposition, that quite a number of eminent scientists chose to keep out of the organisation, on this very ground.

The compliment was well returned by the astrologers. They were little interested in satellite projects of Russia and America and ridiculed mathematical astronomy as a useless science, if it was not to serve the ends of astrology. Some of them even suggested that it was better not to have any Astronomical Association at all, if it was not going to step beyond the telescopic observations of planets or measuring of stellar distances. Naturally such fanatics too had to be kept at bay. The experience, we gained in this controversy, was indeed, valuable.

Scientific Method

The corner-stone of scientific attitude of mind is preparedness to revise one's cherished beliefs and generalisations on the basis of fresh data. New facts can be gathered only if mind is left free to probe new fields, and not kept moving in stereotyped grooves. No field of research is, therefore, precluded from a scientist's probe. Why then make an exception in the case of astrology? Even if ninety-nine claims of astrology, out of a hundred, are found to be false, the truth of the hundredth will amply justify the expenditure on this research. We have set up so many National Laboratories; millions upon millions of rupees are being spent on them annually. Are all the facts discovered by them commercially useful? It should be remembered by every student of science that behind each single success of science, there lies a whole series of failures hidden from public gaze. Why should we then display indecent impatience in the case of verification of astrological facts?

It is often contended that scientific research can yield useful results only when the problem under examination is scientific in nature and astrology is not scientific. This argument is patent with those, whose eyes are focussed on one particular branch of science—Physics, Chemistry or Biology—only, and who have no conception of *science* as a whole. They are not familiar with new fields, which have, from time to time, come within the purview of science. **Psychology, astro-biology and astro-nautics, which were formerly regarded as falling outside the scope of analytical treatment, have now attained the status of exact sciences.** This was made possible by the fact that savants, possessing genuine scientific temperament, refused to exclude psychic phenomena—then a part of occultism—from the sphere of pure science. There will be no tear wasted over the fate of astrology, if all its boasts are found to be empty after a regular enquiry, **but to demand, that even an enquiry should not be instituted, is to display a thoroughly unscientific bent of mind.** Half-baked scientists are not less fanatical in their behaviour than the half-educated religious preceptors!

Classification of Astrological Facts

As it stands today, astrology embodies a mass of facts, some of which can be verified by the useful scientific technique and others not. The effect of waxing and waning of Moon on the sex-life of living beings, the correlation between the sunspots and incidence of influenza, the influence of solar radiations on agricultural produce and in consequence upon the prices of minerals and metals, are some of the examples of astrological facts, which lend

themselves for a scientific verification. **Predictions about the past and future lives exemplify the second category of facts, which cannot be verified by the methods of science, as they stand today.** When we plead for the inclusion of astrology among the subjects meant for scientific research, we are only extending the application of science to the study of a new class of phenomena. We never mean that our approach should be biased, and that the claims of astrologers must, at all costs, be upheld, even when our findings lead us in the opposite direction. We need not pass a judgment on astrology *as a whole*, but on each of its individual assertions. Perhaps some of them may stand the test and the others may be proved to be myths. Our aim should be to isolate facts from fiction.

The verifiable facts of astrology fall under two heads:

(*a*) Those, for which a rational explanation on the basis of present scientific knowledge is possible; and

(*b*) Those, for which an analytical explanation is not available, but a statistical survey establishes their veracity.

The facts of the first type must straightaway be included in the general mass of scientific knowledge. Besides the physical and physiological effects of solar and lunar radiations on terrestrial beings, the possibility of atmospheric and electromagnetic conditions on earth being influenced by other planets, in different positions, should be quantitatively studied and an explanation, if possible, of age-old beliefs should be supplied. Those 'myths', which are not supported by experimental evidence, should be clearly isolated, and set apart for further study.

Importance of Empirical Laws

Facts, which lack analytical explanation, but which are supported by statistical survey, form a very important class. In science, they are called 'empirical laws'—laws, which are found by experiment to be true, but for which no rational explanation has so far been given. The best example of such laws in astronomy is what they call Bode's Law. It relates to the distances of planets from the Sun. The members of the solar system, in order of their distances from the Sun, are Mercury, Venus, Earth, Mars, Jupiter and Saturn, leaving for the present the bodies discovered in comparatively recent times. Let us write a series of numbers zero, three, six, twelve, twenty-four, forty-eight and ninety-six. Add four to each term. Thus we get 4, 7, 10, 16, 28, 52 and 100. Bode's empirical law states that the distances of the planets are in the ratio of these numbers; that is, if the distance of Mercury from the Sun is taken as four units, that of Venus is seven, Earth ten units, Mars sixteen, Jupiter fifty-two and Saturn one hundred. The figure twenty-eight was without a member and led to the discovery of the asteroids; and by extending the law beyond one hundred, the sky-gazers predicted the existence of trans-Saturnian members of the solar system, which were later discovered. The appearance of Uranus, Neptune and Pluto, at the mathematically predicted time and place, forms the most thrilling chapter in the history of scientific discoveries. **And the achievement is largely due to the intuitive generalisation of Bode, to which no analytical basis has been provided to this day!**

Now spectroscopic research has revealed that a close parallelism exists between planetary orbits around the Sun and electronic orbits around atomic nuclei. But while Niels Bohr has given an exact mathematical explanation for the formation of electronic orbits, on the basis of the well-known quantum theory of Max Planck, there is unfortunately no explanation as to why the planets must revolve round the Sun in orbits given by Bode's Law only. We simply do not know why the mean distances of the planets must be in the order of the mathematical series 4, 7, 10, 16, 28, 52, 100, etc. And though we are as yet unable to account for it, we have not shown any reluctance to use our knowledge of Bode's Law to explore space and discover more planets. **A patient cannot refuse to take a medicine, the efficacy of which has been established by usage, though its composition and chemical action on body are not yet precisely known.**

Plea for a Statistical Survey

This digression is deemed necessary because some pseudo-scientists refuse to accept certain astrological assertions on the ground that a direct cause-and-effect relationship between the planetary combinations and the predicted event is not visible. The right scientific approach in such cases would be, first to establish a correlation between the predicted event and the astrological data leading to it, by statistical methods, and then to look for an explanation. An empirical rule, which is found to be true in practice cannot be discarded simply because no analytical explanation for it is forthcoming. **The claims of astrology are many, and some of them can definitely be tested in the usual way.** For instance, the coefficient of correlation between longevity and the relevant configuration of the celestial luminaries can be found from municipal records; hospital reports and proceedings of law courts can be used to find out if

(Continued on page 48)

The Correct Birth Time

BY V. THIRUVENKATACHARYA, M.A., L.T.

Introduction

ALL standard works on astrology stipulate that correct Lagna or Ascendant is absolutely necessary for correct prediction. Parasara states that without correction by Prana Pada method, it is useless to study any horoscope. Every standard work on astrology like *Brihat Jataka* or *Sanketanidhi* gives methods of rectification of birth Lagna. *Sanketanidhi* observes :

तन्वादि भावान् खचरांश्च कृत्वा स्पष्टान्
फलं कीर्तयितुम् क्षमः स्यात् ।.....

"It is only after calculating correctly the several Bhavas beginning with the Lagna and their Sandhis and the exact positions of the planets, that it will be possible to declare the effects arising therefrom."

Generally we do not mark the Bhavas but only indicate the Rasi in which Lagna lies. I have noted in some cases of Kuja Dosha, Kuja being situate in the third or sixth or eleventh Bhava of some charts; some charts with no apparent Kuja Dosha have been found to be with Kuja Dosha according to Bhava Chakra.

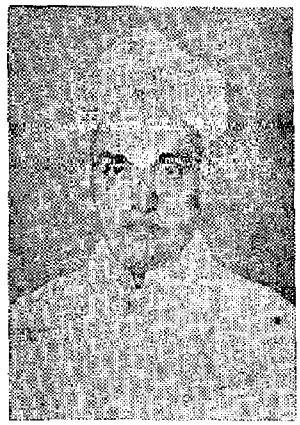
Need for Correct Lagna

Our books on astrology insist on the calculation of at least Shadvargas—Lagna, Hora, Drekkana, Navamsa, Dwadasamsa and Thrimsamsa. These require the degree positions of the Lagna and not simply the Rasi alone. Sometimes Shashtiamsa is thought of requiring the position of Lagna correct to half-a-degree.

लग्नेधीरश्चिन्तये देहभावं होरा
लग्नात्संपदार्थं सुखंच ।
द्रेष्काणाङ्गं द्वन्धु सौख्यं विचिन्त्यं
साक्षांशाङ्गात्संततेः स्याद्विचारः ॥
—*Sanketanidhi* 2–27

"All about one's body should be studied through Lagna; wealth, happiness from the Hora Lagna; happiness of relations through Drekkana Lagna and children from Saptamsa Lagna."

कलत्र सौख्यादि नवांशलग्नाद्वि-
लोक्यमर्कांशकतोत्रपितोः ।
लिंशांशकादिष्टफलं च वाच्यं सर्वं
विलग्नादपि चिन्तनीयं ॥
—*Sanketanidhi* 2–28



V. THIRUVENKATACHARYA

"Wife's happiness is to be studied from Navamsa Lagna, parents from Dwadasamsa Lagna and one's cherished desires from Thrimsamsa Lagna ....."

Sanketanidhi states that a man's temperament can be known from *Thrimsamsa* of the Sun. It is a matter of regret that in South India it has become a practice to note the Lagna Rasi and the Rasis occupied by the planets in the birth chart instead their positions in degrees and minutes. I hope that at least a standard journal like THE ASTROLOGICAL MAGAZINE will see to set right this defect in our practice.

What is the Correct Birth Time ?

Unlike the Western astrologers, our ancient scholars have discussed this problem thoroughly. For example when an individual selects an auspicious time for a journey, only the auspicious nature of *the starting time* is taken into consideration, and he does not bother about the different stages of his journey. Evidently *well begun is half done*. Similarly we have to consider the different stages of confinement to select the proper birth time. Our sages have stated that (*a*) discharge or *srava*; (*b*) presentation of the head of the baby or *sirshodaya*; and (*c*) delivery or *bhupathanam* are the three stages of confinement to be considered for casting a birth chart and that they are in *decreasing* order of importance; but this rule has never been followed. From a common-sense point of view *delivery* must be a simple and easy process for a woman just like the dropping down of a ripe fruit from its stem. At least in India, among the educated classes, delivery has become a troublesome process—a matter of life and death for the woman. Sometimes the pains continue for a long time and the different stages mentioned above do not come in quick succession as in healthy cases. Frequently, the woman is delivered of the child with the aid of instruments and choice of the proper time of birth becomes a complicated matter.

It is my personal opinion that *srava* or *discharge* must be

considered as the beginning of the confinement and chart must be prepared for that moment. I am making this statement from a personal experience of a study of some charts.

Predictions do not tally in many charts and progressions fail miserably, with the result that astrology is described as being undependable.

Let us take some examples to illustrate my arguments.

Case I.—This is the case of a baby born a few months ago. So there are no events to rectify her chart. Hers is a case of instrumental delivery, the pain having extended over two or three days, which were not at all astrologically auspicious. It is considered lucky that the birth was delayed as otherwise consequences would, I think, not have turned out to be happy. The birth took place on 26-2-1958 at 2-45 p.m. (L.M.T.), Madras, in a nursing home. S.T. at noon 22-22-26.

Sun 7–16 Budha 4–31	X 15	Kethu 4–19	Moon 1–46
Sukra 1–38	No. I		I 17–25
Kuja 17–4			H 8–30 Rg.
Sani 24–35	Guru 1-28 R Nep. 4–38 R Rahu 4–19		Pluto 2

(*a*) Varahamihira's rule for rectification when the Moon is increasing, that the Dwadasamsa of the Lagna must be the Rasi of the Moon is *not satisfied* unless we take the last dwadasamsa which will be absurd.

(*b*) *The child is long-limbed and lean and Cancer cannot indicate these qualities.*

These two points made me probe further into the matter. The Moon's position being semi-square to Lagna, I was worried about the longevity also as Kuja is exactly setting. I remembered the nurse casually mentioning that 'discharge' or *srava* occurred at 8 a.m. (I.S.T.), when the 10th house will be Makara 3° and Lagna Mesha 3° 57′. The Moon will be in 28° 19′ Vrishabha (Taurus).

Varahamihira's method of rectification gives us that Lagna is 2° 30′ plus 28°19′ ÷ 12′ = 4° 51′.

Physical qualities are easily explained by this Lagna. M.C. is fortified by the benefic aspects of the Sun, Budha, Guru, Neptune, Rahu and Kethu. Lagna is fortified by the benefic aspects of the Moon and Sukra. *The trine of Uranus to Lagna explains the physical appearance of the baby more than anything else* and this supplied me with the necessary clue. A single swallow does not make the summer, but we should count as many swallows as possible. *Will it be possible for the Editor of* THE ASTROLOGICAL MAGAZINE *to organise a research group for this purpose and publish the results in the columns of the Magazine?*

In the case of normal deliveries, all the three stages of delivery will be in quick succession and these difficulties do not arise at all. Considering case I again, taking Mesha 4° 51′ as Lagna, it is clear that malefics in the 2nd and 8th houses cause *Balarishta* but the exalted lord of Lagna has saved the baby so far. The child was delivered with the help of an instrument when Kuja came to an angular position. Did Kuja save the child because he is the exalted lord of Lagna at the first stage of confinement? Probably so. The second stage or head presentation might have taken place when Kuja was angular at about 9 a.m. but this statement is only a guess.

Case II.—Let us take another interesting case of birth on 5–9–1896 at 48 gh. 13 vig. in a hospital with the help of forceps. L.M.T. of birth is 1–26 a.m. on 5–9–1896. The Sayana chart is given below:—

	X 4–50		Kuja 11–12 Neptune 20–13
Rahu 23–24	No. II		I 11–46 Moon 5–44 Kethu 23–24 Guru 25–9
	Hers. 21–4 Sani 14–27	Budha 8	Sun 12–43 Sukra 28–24

For forty-five years, the chart was considered to be correct and predictions were made. The general trend of influence was not inaccurately predicted by Dasa Bhukthi method, which helps one to predict fairly accurate results even when the Lagna is doubtful as the Bhukthis take into account the relative positions of the Bhukthi-lords and Dasa-lords.

But the physical appearance was quite the opposite to that indicated by the Lagna (Kataka) as worked out. Progressions never tallied. One or two Hindu methods of rectification miserably failed. Is it possible to predict highly educated sons with Sani and Uranus in the 5th house, whether we take Sayana or Nirayana chart? A scar on the cheek will naturally lead a person to the conclusion that probably Kuja must be in the Lagna and not in the 12th house.

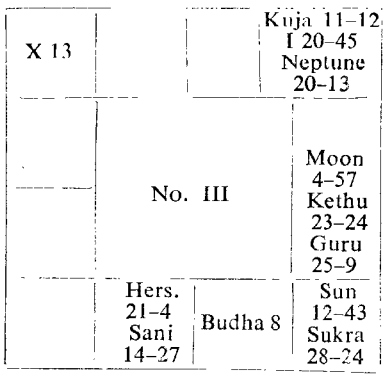
Applying the rules of Varahamihira for rectification, since the birth occurred in the dark

fortnight, the Moon at conception must be in Dhanus, the Dwadasamsa being that of Simha. The Moon at conception must be 20°-22½° of Dhanus and the Lagna must be Mithuna (20°-22½°) which is the ninth Dwadasamsa. The Moon's position at birth came to be 4° 57′ Simha and Lagna was 20° 45′ of Mithuna with its M.C. at 13° Meena. Time of birth had to be shifted to 12–1 midnight (L.M.T)

The following are the main events of life :—

9–7–1915—Marriage.
11–1–1922—Father's death.
April 1924—Recognition in educational field along with minor troubles.
Sept. 1937—Pilgrimage.
June 1946—Professional advancement.
April 1956— Do. do.
13–8–1957—Mother's death.

The modified chart will be as follows :—



Let us consider the progressions for each of these events.

(*i*) *Marriage*:—9-7-1915—age 19 years. Sukra progresses to 21° 29′ of Thula having made a trine to Lagna and Neptune in 1914 and approaching a trine to Kethu in close conjunction with Guru lord of the house of marriage. In May 1914, as a matter of fact, marriage negotiations were broken off at the last moment as Venus alone, was not strong enough to bring about the event, Venus being very weak in the radical chart. 21° 29′ of Thula is the balancing point between the trine to Lagna and a sextile to Kethu. (I have taken a degree as the orb for progression. Transits play their part in this).

(*ii*) *Entry into Service* :—June 1919—age 23. Sun sextile to the radical Moon. Sun is progressing in his house of debilitation indicating a low start not suitable to the position of the native.

(*iii*) *Father's Death*:–11-1-1922—age 25 years, 4 months. M.C. progressed to 8° 20′ of Mesha making 45° to Rahu and 135° to Uranus progressed. The death was sudden and unexpected.

(*iv*) *Recognition in educational field along with minor troubles*:–1924 April–age 27½ years. Budha progressed to the trine of Rahu and Kethu and M.C. progressed to 10° 30′ of Mesha making 135° aspect to Guru—trouble being of a legal nature.

(*v*) *Professional advancement*:–June 1925—age 28¾ years. M.C. progressed to 11° 45′ of Mesha forming a sextile of Kuja, who is the lord of 11th house. M.C. progressing in the house of Kuja and making a benefic aspect with him must be doubly powerful.

(*vi*) *Pilgrimage* :—September 1937—age 41 years. 1936 to 1939 were years of journeys, transfers and pilgrimage indicated by the malefic and benefic aspects of progressed Budha to Kuja, Kethu and Guru. Progressed Sun lent its weight. Angles are not involved. But I think it is sufficient as Budha—lord of the Lagna, and Sun—the lord of the 3rd house are involved. Kethu is a planet of religion and Moksha according to Hindu astrology. Under this planet's influence, a pilgrimage from Hardwar to Rameswaram was completed.

(*vii*) *Professional advancement*: *June 1946*.—The part of professional advancement is Lagna +Fortune–Sani=19° Dhanus. Professional advancement occurred at 49¾ years ; taking one degree for a year, the progressed position of professional advancement comes to 8¾ of Kumbha making a trine to Budha, the lord of Lagna. But the year was full of troubles due to other influences.

(*viii*) *Professional advancement* :—April 1956—age 59½ yrs. M.C. progresses to the sextile of Sun, progression being reckoned at the rate of *one degree per year*.

(*ix*) *Mother's death*: 13-8-1957—age nearly 61 years. Lagna progresses to the square of Sani–the lord of the 8th house.

(*x*) About this time, M.C. progressed, is afflicted by Sani giving the reason for lowering of status.

Conclusion :—'One swallow does not make summer' but it indicates the possibility of a change in the weather. Astrology also requires certain changes to make it scientific and easy for ordinary persons to understand. Complicated and laborious methods are not to be adopted as we will be lost in their complexities ; but accuracy must never be sacrificed.

Primary directions and other modern innovations which we find mentioned in the pages of THE ASTROLOGICAL MAGAZINE may be thought of by those who have the leisure and ability to deal with them. Ordinary students of astrology must have ordinary and simple methods of prognostication without sacrifice of efficiency. Even Sripathi is too complicated to be of any ready and practical use.

If correct birth time is noted, simple methods like the one indicated in the preceding paras ought to be sufficient to give readings. In Western astrology,

the problem of birth time has never been tackled; but we have overlooked the problem inspite of the warning given by our sages. Newton's inverse law of squares did not work well with Budha and so some modification was suggested in the law of squares; as a matter of fact, 2 in ½ was replaced in 2.00012 to explain the discrepancy in the motion of Budha. But Einstein's Theory of Relativity solved the mystery about the motion of Budha. Similarly whenever there was something going wrong, modern astrologers advocated changes in the subject itself. I have given in these pages what I had in mind without reservation and it is for the scholars to analyse and decide.

Many methods are in use as regards the progression of M.C. and I have used the simple formula of one degree per year instead of the corresponding sidereal time of the secondary directions. My method is simple provided the birth time is correct.

For father's death, let us take the 9th cusp according to the Hindu system to represent the father. 9th cusp is 15° 35′ of Kumbha and father's death occurred at the age of 25 1/3 years and the cusp of the 9th house (Pitru Bhava) progresses or has a close approach to the square of Mars or Kuja.

By oblique ascension, the cusp of the 4th house (Mathru Bhava) goes to the square of Guru—highly significant from the Hindu viewpoint. According to us, funeral ceremonies for the parents are considered to be a type of Yagna and a necessary duty for a Hindu. When parents pass away at a ripe age, the occasion is considered more as a festival than as a mourning. Father's elder brother passed away in 37½ years of age; father's elder brother is indicated by the 11th house from the 9th house, *i.e.*, the 7th house, the cusp of which is 20° 45′ of Dhanus which progresses to 28½° of Makara making a close 135° aspect to Sun.

Lagna has been shifted back by 22°, which satisfies Varahamihira's rule for rectification and the events in the life. Is it justifiable? This is a problem that is posed for others to answer.

In this connection, the reason why astrological predictions do not come true on some occasions has to be tackled scientifically. It is for students of astrology to pass their judgment whether what has been written in these pages has been scientific and whether one can ignore with impunity the noted time of birth when the child is completely delivered from the mother or the earlier moment of first discharge indicating the beginning of delivery.

SCIENTIFIC ATTITUDE TOWARDS ASTROLOGY

(*Continued from page 44*)

natives possessing specific horoscopic pecularities did have the astrologically predicted history or not.

Need for a Common Forum

The scrutiny of astrology has been made particularly difficult by the unfortunate circumstance that there is no reliable method of separating the genuine astrologer from quacks. In physical sciences, the deciding factor is the experimental test or the analytically reached conclusion. Since a large number of astrological rules cannot be verified experimentally and involve a type of reasoning, the basis of which is not "from known to unknown" but "from unknown to unknown", it is impossible to decide, who is a genuine master of the science and who is a mere pretender. Not to talk of a layman, even those who claim to know astrology, often fail to agree among themselves, who among them are quacks and who real scholars. This creates confusion in the public mind and no methodical survey in this direction can be easily undertaken. **Perhaps if seasoned science men join hands with astrologers of repute and long-standing fame, some useful results may emerge. A common forum, for the two classes of savants to meet, is absolutely essential.**

OR

THE HINDU PROGRESSED HOROSCOPE

Based on Tajaka (6TH EDITION)

By B. V. RAMAN

This book based on Tajaka covers fresh grounds in the field of prediction. It describes a unique method never before disclosed for deciphering annual life readings. Predictions made according to this work yield unique results. Whether you are a layman or initiated, you can draw up and interpret the annual reading in an easy and scientific manner. The system propounded in the pages of this work is rational and in actual practice yields most satisfactory results.

OPINION

"The author outlines a method of deciphering annual results from the Hindu horoscope. He claims that the principles of Tajaka astrology have been found to work accurately in actual practice, and controverts the orthodox belief that the system can be applied only to charts of individuals who have passed the age of thirty. There are many useful tables at the end and a summary."

Fundamental Particles

BY VASANTARAO VENKATRAO, M.Sc.

NATURE seems to be ever elusive. The more we try and succeed in unravelling the mysteries of nature the more baffling and multiplied they appear to be. And yet, man, like an undaunted crusader ever increases his pace in the quest for truth. It did not take him long to realise that the river of knowledge turns round many a time in its sonorous journey, but every turn surely takes him nearer the truth. As he intensified his investigations he developed a faith in the simplicity and symmetry of nature. The evolution of the ideas of the atom may be cited as an instance.

From the earliest times some men were engaging themselves in all ages and climes in observing nature in her pristine glory and building up systems of thought based on their observations. Intuitively they felt that the multiplicity and diversity were only apparent and that there exists an indiscernible unity. That thought led them to postulate a few primary or elementary substances which combined in various ways to produce the many substances we come across. The number ranged from four to seven. The Hindu concept put it at five, *viz.*, prithivi, appu, thejas, vayu and akasa. The greatness of this concept lies in the fact that the entire universe can be explained in terms of the five primordial substances or the *Pancha Bhutas*. Prithivi, appu and vayu represent the three states of matter—the solid, liquid and gaseous. 'Thejas' is energy and 'Akasa' is space. Some systems included mercury and sulphur in the category of the elementary substances.

All substances are supposed to be made up of small indivisible particles called *Paramanu*—atoms as they are now called. The *paramanu vada* is dealt with at great length in philosophies propounded by the sages Kapila and Kanada, though it cannot be said that the dimensions of the atom as we conceive it today were imagined. Nevertheless the idea of an ultimate particle as forming the basis for the formation of the varieties of matter was there.

VASANTARAO VENKATRAO

From the beginning of the 17th century the idea of the atom was pursued with great avidity. The compressibility of the gases required to be explained in terms of small particles which were quite dispersed normally and which could be compressed by the application of pressure. Evidences from many sources forced the scientists to view matter as an aggregate of small and identical particles which were kept together by forces of attraction. The later chemists definitely stated the difference between an element and a compound and the difference between an atom and a molecule. There are few primordial substances which are called "elements". Each element is composed of atoms which are identical and which are indivisible. In the free state a few atoms may aggregate themselves into clusters; such a cluster is a molecule. The number of such elements was said to be 92. Now we know that it is raised to 102 to this day. Elements combine to form "compounds". Compounds are innumerable and all the variety of substances we come across in the world, and even beyond this world, are made up of various elements combined in various ways. For example, hydrogen and oxygen combine to form water; they combine also to form hydrogen peroxide. The smallest part of a compound that retains its own properties is called "molecule". A molecule can be broken, but then it splits up and exhibits quite different properties. A molecule of water when chemically split up gives rise to new substances oxygen and hydrogen. Thus, the idea of the atom as an indivisible particle was firmly held by the scientists till the last decade of the last century.

The 1890's was a period of feverish activity. By that time it was definitely established that the atom was not an indivisible particle, since, experiments on the discharge of electricity through gases showed beyond doubt that negatively charged electrical particles were rushing in the tubes from the cathode with great velocities and that whatever substance was used as the cathode the same particles

were emanating. So, the atom should be thought of as consisting of two types of electrical particles, the negative and the positive. The atom has a structure. The discovery of radio-activity confirmed this view. Radio-active elements were found to give out spontaneously three types of rays known as alpha, beta and gamma rays. Beta rays had negative charge, while alpha rays showed a positive charge. As both were emanating from the atom it was quite clear that the atom had a positive and a negative part within itself. The negative particles were called "electrons". The positive counterpart is called "proton".

Sir J.J. Thomson suggested an atomic model in which the positive charge was supposed to be uniformly distributed and in its interior the negatively charged particles were floating. The combined negative charge of the electrons was just balanced by the positive charge so that the atom, as a whole, was electrically neutral. This could explain the phenomenon of ionisation; for, some of the loosely bound electrons can be detached making the atom a positive ion, or some electrons could be attached to the atom making it a negative ion. He was also able to determine the ratio of the charge of the electron to its mass. But the experiments of Rutherford on the scattering of the alpha particles revealed that the positive charge of the atom was concentrated inside the womb of the atom in an incredibly small space along with most of the mass of the atom. In fact, the positively charged part of the atom was thousands of times smaller than the atom itself. At this juncture Niels Bohr put forth the new model of the atom which is analogous to the solar system. In the solar system the Sun is at the centre and the planets revolve round the Sun in different orbits. Most of the mass of the atom comprising the heavy protons was supposed to be at the centre forming the "nucleus" and electrons revolving round the nucleus in different orbits. In the original model some electrons too along with the protons had to be accommodated in the nucleus, but, later on the view is changed. The nucleus is now supposed to contain protons and an appropriate number of neutrons while a number of electrons equal to the number of protons in the nucleus revolves round the nucleus. The total number of protons and neutrons accounts for the atomic weight and the number of electrons in the normal orbits represents the atomic number. So, as far as the atom is concerned, this model appeared to be a workable one.

The faith in the symmetry of nature made it impossible for the scientist to accept the proton as the counterpart of electron. It is true that the charges of both are equal and opposite; but the disparity in their masses was too much to be swallowed. It was felt that there must be a fundamental particle having the same mass as electron and an opposite charge. Similarly it was felt that there should be a particle having the same mass as a proton but an opposite charge. The scientists were on the alert and both the particles were discovered. The former is the "positron" and the latter is the "antiproton" or "negatron" as suggested by Max Born some two decades back. Starting with only two fundamental particles, electron and proton, three more, neutron, positron and antiproton were added to the list of fundamental particles.

Remembering that like charges repel and that protons are positively charged particles, it was difficult to explain how so many protons could be squeezed into an incredibly small space and how they could be kept together so stably in the nucleus. Some sort of binding energy was found necessary to impart stability to the nucleus. The Japanese scientist Yukawa suggested a theory to explain the extreme stability of the atomic nucleus. According to him a "charged field" is responsible for holding the protons and neutrons. It is something like an exchange force that passes between a proton and neutron and it is the "meson field". This can be compared to the electro-magnetic field which keeps a peripheral electron bound to the nucleus. Thus, the meson or mesotron was first theoretically visualised and later actually discovered.

The cosmic ray showers helped the scientist to a large extent in identifying some of these so-called fundamental particles. The number of particles known to this day are shown in the table below. They appear to be fundamental and more often undergo transformations into other known particles. The masses of these particles vary from one electron mass to nearly 2600 electron masses. Only two particles, proton and electron, seem to be stable. Next comes the neutron with a life period of about 12 to 16 minutes. The rest of them have life periods varying from 2×10^{-6} second to 5×10^{-15} second; their lifetimes are very transient. They spin about their axes, and it is this spin that enables us to differentiate the positive particle from the negative one. When subjected to a magnetic field the orientation of the different particles will be different. Each has its own scheme of decay. When a particle encounters its

anti-particle they collide with each other and annihilate.

TABLE

Group	*Members*		*Rest Mass (Electron Masses)*	*Mean Life (Seconds)*
Nucleons	Proton	p^+	1836.13	Stable
	Antiproton	p^-	1840 ± 90	5×10^{-8}
	Neutron	n^0	1838.65	750
Leptons	Electron	e^-	1	Stable
	Positron	e^+	1	Annihilates
	Neutrino	ν	0	
Light Mesons	Negative Pi Meson	π^-	272.8 ± 0.3	2.44×10^{-8}
	Positive Pi Meson	π^+	273.3 ± 0.2	2.53×10^{-8}
	Neutral Pi Meson	π^0	263.7 ± 0.7	5×10^{-15}
	Negative Mu Meson	μ^-	207 ± 0.5	...
	Positive Mu Meson	μ^+	206.9 ± 0.4	2.15×10^{-6}
Heavy Mesons	Tau Meson	τ^+	965.5 ± 0.7	5×10^{-8}
	Theta Meson	θ^0	965 ± 10	1.6×10^{-10}
	Chi Meson	$\chi\ (K\pi_2)$	963 ± 9	1×10^{-8}
		$(K\mu_2)$	960 ± 7	do
	Kappa Meson	$\kappa(K\mu_3)$	955 ± 9	do
		$(K\epsilon^3)$	960	...
Hyperons	Lambda Particle	Λ°	2182 ± 2	3.7×10^{-10}
	Positive Sigma Particle	Σ^+	2327 ± 4	About 10^{-10}
	Negative Sigma ,,	Σ^-	2325	do
	Cascade Particle	Ξ^-	2582 ± 10	do

The latest seems to be the discovery of a new property of the nuclear particles. Some of them seem to have a screw-like motion. They exhibit a direction of movement with a direction of rotation; just as a screw moves forwards or backwards whenever it is given a rotatory motion. What new fields this leads into is a matter for conjecture.

The search for the counterpart of electron, most unexpectedly, resulted in the discovery of a new element, the very first of the series of elements. It is called " positronium". The atom of positronium is different from the atoms of all the other elements in the sense that, while every conventional atom has a heavy positively charged nucleus round which one or more electrons are supposed to be revolving, the positronium atom has no such nucleus. It consists of one positron and one electron, each of the same mass but of different charge. They revolve about a common centre of mass. Like the Radha-Krishna dance they perform a revolving dance for a minute fraction of a second and annihilate each other giving birth to two or more photons, which emerge in the form of gamma rays.

The number of photons or gamma rays that are thus generated by the transformation of matter into energy is stipulated to be atleast two by the law of conservation of momentum. Without the gun a shot cannot be fired. As the shot leaves the muzzle of the gun the reaction is taken by the gun. Likewise the moment matter is transformed into energy atleast two gamma rays must be born to kick each other and dart off in opposite directions. But the number of gamma rays could be more than two. The annihilating positronium atom registered, in some cases, the birth of three gamma rays also in suitably arranged scintillation counters.

Both the positron and electron have a spin of their own. Both of them may spin in the same direction or in opposite directions. Remembering that a spinning charge behaves as a magnet and that the charges of the positron and electron are opposite in sign, it can easily be seen that when both of them spin in the same direction they behave as magnets with their opposite poles pointing in the same direction and when they spin in opposite directions they behave as magnets with their like poles pointing in the same direction. As they revolve in the orbit, in the former case they are subjected to a force of magnetic attraction whenever their axes are farther apart and in the latter case a force of magnetic attraction comes into play whenever their axes are collinear, (as shown in the figure). The first type of atoms form " orthopositronium " and the second type constitute " para-positronium ". The annihilation of an atom of ortho-positronium results in the birth of three photons while the annihilation of a para-positronium atom gives birth to two photons. In both the cases the photons manifest themselves as gamma rays which could be

(Continued on page 136)

READY FOR SALE

BRIHAT JATAKA

OF VARAHA MIHIRA

English Translation by **Prof. B. Suryanarain Rao** with original slokas in **Bold Devanagari**

(FOURTH EDITION)

This is a monumental work written by Varahamihira the versatile genius of the first century B.C. and deals with the entire Science of Astrology in a masterly way. *Brihat Jataka*, as the author rightly asserts, is intended as a boat for all those who at first get despirited at the sight of the vast ocean of astrological knowledge but who wish to cross the same.

The book contains the invaluable commentaries of Bhattotpala which have made clear many of the obscure passages. Prof. Rao has given copious notes in his own inimitable style which facilitates easy comprehension.

CONTENTS

Introduction, Explanation of Technicalities, Differences in Planets, Various forms of Birth, Conception and Peculiarities of this Phenomenon, Peculiarities of Birth, Balarishta or Early Death, Determination of Longevity, Periods and Sub-periods, Results of Planets, Means of Livelihood, Rajayogas, Nabhasa Combinations, Results of two Planets in Combination, Ascetic Combinations, Stellar Influences, Lunar Influences, Results of Planetary Aspects, Results of Planets in different Houses, Mixed Results, Misfortunes, Female Horoscopy, Combinations for Death, Lost Horoscopy, Drekkana Influences, etc.

In fact this is the one book that everyone should read for getting a thorough knowledge of the subject. Prof. B. Suryanarain Rao is hailed as Abhinava Varahamihira and his masterly notes and the lucidity with which he has explained the principles merit your attention.

A New Method of Progression

BY L. NARAYANA RAO, M.A.

PROGRESSION has a mathematical genesis. It is something like an inexhaustible fountain from which a series sprouts out. The series obeys certain laws of formation of the series. It is developed from a function called the generating function. With this much background let me switch on to the use of this for astrology.

Astrology is the unfathomed science of sciences, because its ways are still a mystery to the ordinary man. It is exact in itself—a thing about which there can be no doubt in the least. Because we are unable to predict the events or their timing accurately and faithfully neither the sastra nor its founders could be blamed for it.

The horoscope or the original radix chart is the generating function; an individual's life span with its various incidents vicissitudes, fortunes, misfortunes, fluctuations between two extremes can be compared to the terms of the series. While the birth chart or the radix is taken as fixed for all time, to time the events, as to when a particular event would come to pass, we have necessarily to progress the radix. The Hindus have the systems of Dasas—various methods are available and each is found to apply in particular instances, the most popular among them being the Vimshottari system of Parasara. There are other independent methods like *gochara* (with reference to the Moon's position at birth), Astakavarga, etc. Whatever method we may apply, the ultimate purpose is to time the coming events which are indicated in the radix.

In European astrology, there does not appear to be any Dasa system, but they have several directional systems and progressions; and it is claimed that those methods also give quite accurate results. Instances are not wanting wherein students of Indian astrology even have given up their traditional methods in preference to directional methods. It is a matter of individual choice and we shall leave it at that stage.

The purpose of the present article is to establish a method independent of Dasas for prognosticating of events in the life

L. NARAYANA RAO

series from the generating function, *viz.*, the radix horoscope. A few years ago, I had written an article on 'Varshaphal' in the columns of our esteemed ASTROLOGICAL MAGAZINE with the kind patronage of our learned Editor. I am going to illustrate the same principles once again, with certain extensions. Let my readers be not disappointed if I cannot, in this context, cater to their taste for the progression system of the occidentalists.

Let me at first recapitulate the substance of the last article and the principle embedded therein. Here the position of the Sun at birth is kept the same as a fixed position for all time but only progressing the Ascendant, Moon, Nodes and Planets. Every year when the Sun comes to the same exact sidereal longitude, one year is reckoned. This period will not be always equal to the length of the sidereal year of 365.2563744 days, due to the slow progressive motion of the Aphelion-Perihelion line. The exact time when the Sun exactly repeats itself will be the time of anniversary of birth and the Ascendant for this moment should be calculated for the place of birth, with due reference to the latitude and the local mean time. As for the planets, Moon and nodes, the then positions are not required for the purpose of this method. Instead the following annual rates are to be adopted :—

Moon	...	.631596
Mars	...	.151886
Mercury	...	.260863
Jupiter	...	.144593
Venus	...	1.501269
Saturn	...	.203379
Rahu Kethu	...	.129039

(*N.B.*—The rates are in decimals of a sign).

For the determination of the Ascendant, in a rough and ready manner, we can adopt the constant value of 3.0765928 signs per year. A more accurate method will be to calculate by using the oblique ascension of signs for a duration of 15 gh. 22¾ vig.

I am herewith giving an example horoscope to illustrate the method :

Date of birth	...	9th June 1907
Time of birth	...	23 gh. 1 vig.
Latitude	...	10° N. 47′
Longitude		77° E. 15′

Planetary Positions

		°	′	″
Sun	...	54	51	7
Moon	...	37	16	55
Mars	...	266	14	49
Mercury	...	72	27	38
Jupiter	...	81	57	12
Venus	...	28	49	50
Saturn	...	334	8	49
Rahu	...	92	49	10
Kethu	...	272	49	10
Ascendant	...	187	2	45

Problem:—Let us find out the effects of the progression for the year 1944–45, *i.e.*, number of years past 37.

(A) Fixation of Ascendant at the moment of anniversary of birth:

(a) By rough and ready method:

Advance in 1 year is 3.0765928 signs
,, 37 years is 3.0765928×37
$= 5.8339336$

(In arriving at this figure, the number of revolutions of 12 signs has been eschewed.)

Add Ascendant of birth = 6.2349
∴ Progressed Ascendant = 0.0688
(which is Aries)

This is sufficiently accurate for low latitudes; but as we go higher up, this rough and ready method will not hold good. The detailed method will require to be worked out. For the sake of facility, I shall describe it as hereunder.

Length of sidereal year = 365.2563744 days.

Dividing by 7 to leave off the number of weeks, we have 1.2563744 odd days, which is equivalent to 1d. 15gh. 22.94784 vig. Multiplying by 37, we get 46-28-49.07008, once again dividing by 7, we are left with 4 d. 28 gh. 49.07 vig.; to this add 1 d. 23 gh. 1 vig. (where 1 represents Sunday—the day of birth, and 23 gh. 1 vig. represents the time of birth). We get therefore 5 d. 51 gh. 50 vig., *i.e.*, a Thursday at or near 9-6-1944 and time 51 gh. 50 vig. By a reference to the calendar of the year 1944, we find that this corresponds to the early hours of the 9th June 1944.

At the time of birth for the position of the Sun 54° 51′, the portion of Taurus unspent is 0 gh. 52.48 vig. for the place of birth; the succeeding signs from Gemini to Pisces inclusive, give 50 gh. 20.4 vig. and altogether 51 gh. 12.88 vig. The portion traversed in Aries will be therefore 51 gh. 50 vig. minus 51 gh. 12.88 vig., which yields 37.12 vig. Duration of Aries is 274 vighatikas. Thus the position of Aries (in decimals) is .1355. This being a more accurate method, we shall adopt this as the progressed Lagna.

(*b*) Now let us obtain the progressed positions for 37 years past. For Sun there is no progression. His original radix position of 1.8284 signs will be the same. But this factor would not affect the predictions, as the position, ownership, etc., will vary every year for the Lagna changes correspondingly.

	Moon	*Mars*	*Mercury*	*Jupiter*	*Venus*	*Saturn*	*Rahu*	*Kethu*
At birth	1.2427	8.8749	2.4153	2.7318	.9610	11.1382	3.0940	9.0940
For 37 yrs. progression	23.3691	5.6198	9.6519	4.2350	55.5466	7.5250	−4.7844	−4.3096
	0.6118	2.4947	0.0672	6.9668	56.5076	6.6632	10.3096	4.3096
					−48			
					8.5076			

	Lagna Moon Mercury	Sun	Mars
Rahu	9–6–1944 to 1–9–1944		
			Kethu
Venus		Jupiter Saturn	

Moon changes from Aries to Taurus on January 20, 1945; Jupiter changes from Libra to Scorpio on September 2, 1944; Venus changes from Sagittarius to Capricorn on October 7, 1944; Venus changes from Capricorn to Aquarius on June 8, 1945.

This gives the following charts for reading the effects of the configuration:

(*c*) We should also find out now if any of the planets change over to the next sign during the course of the year under consideration. This can be readily seen from the annual rates given. See Moon; he has to traverse .3882 of the sign, while the annual rate is .6316; he will therefore change after $\frac{.3882}{.6312} \times 365.25$ or 224.5 days. Similarly Jupiter changes after 83.9 days. Venus changes after 119.8 days and again 243.3 days later. The corresponding dates will be as follows:

	Lagna Moon Mercury	Sun	Mars
Rahu	2–9–1944 to 6–10–1944		
			Kethu
Venus	Jupiter	Saturn	

	Lagna Moon Mercury	Sun	Mars
Rahu	7-10-1944 to 19-1-1945		
Venus			Kethu
	Jupiter	Saturn	

	Lagna Mercury	Sun Moon	Mars
Rahu	20-1-1945 to 7-6-1945		
Venus			Kethu
	Jupiter	Saturn	

(*B*) *Readings of the Progressed Charts*:

Chart I.—Lord of progressed Lagna is in the 3rd house in an inimical sign, with interchange of houses. Lord of 4th is with the lord of 3rd and 6th aspected by Saturn, lord of 10th and 11th. Although the aspect of Jupiter lord of 9th is there, yet the combination of the lords of 9th and 10th who are also lords of 12th and 11th respectively is not productive of any good. Opposition of Venus and Mars who are lords of 7th and 1st house in the progressed chart and who happen to be lords of 1st and 7th in the radix, should be specially noted. It is worthwhile noticing that the progressed Ascendant falls in the 7th from Ascendant radix. The period was very mediocre in official line and financially full of domestic quarrels estranged feelings, slight ill-health due to nervous breakdown.

Chart II.—Even the benefic aspect of Jupiter which was obtaining in the Chart I has been withdrawn; but there was mutual aspect of the lords of 5th and 9th. This developed into aversion for worldly things and a turn to spiritual and religious outlook. But as Jupiter is the lord of the 6th in the birth chart, it was not lasting or leading to further advancement.

Chart III.—Venus lord of Ascendant in radix in the tenth is the only good position. Jupiter was unfavourable being in the 8th. The Moon and Mercury in Lagna is not a good yoga due to lordship further deteriorated by Saturn's aspect. There was a long tour for a month or so, in utter disgust and frustration.

Chart IV.—The change of the Moon to Taurus with the Sun (combination of lords of 4th and 5th houses) aspected by Jupiter (lord of 9th). Sani in his exaltation and in interchange with Venus and further aspected by his friend Mercury. Venus lord of Ascendant (radix) in 10th from Ascendant progressed in 9th from the Moon, lord of that house Saturn occupying the 10th from Venus was indicative of a change of place in connection with professional activities, in a higher official circle. It did take place in March/April 1945, with a slight financial benefit.

In order that my readers may properly understand the working of the method, let me progress the horoscope for 1951-52, *i.e.*, 44 years past. The progressed positions are as follows: Moon 5.0329, Mars 3.5579, Mercury 1.8933, Jupiter 9.0939, Venus 7.0168, Saturn 8.0839, Rahu 9.4163 and Kethu 3.4163. Progressed Ascendant falls at signs 9.4680. Mercury changes after 149.4 days to Gemini (*i.e.*, on 1951, October 5th. Venus changes after 239.2 days, *i.e.*, on February 3,1952 to Scorpio.

		Sun Mercury	
	9-6-1951 to 4-10-1951		Mars Kethu
Lagna Jupiter Rahu			
Saturn	Venus		Moon

		Sun	Mercury
	5-10-1951 to 2-2-1952		Mars Kethu
Lagna Jupiter Rahu			
Saturn	Venus		Moon

		Sun	Mercury
	3-2-1952 to end of the progressed year		Mars Kethu
Lagna Jupiter Rahu			
Venus Saturn			Moon

Chart I.—Important developments in professional sphere are indicated by lord of 9th in the 5th with Sun, aspected by lord of 10th and also by Jupiter.

Chart II.—See lord of 9th in the progressed chart occupying the original radix position and 10th from progressed Moon, who is the lord of 10th from birth Lagna. This also gave certain lasting benefits in the official career.

Chart III.—Venus has moved to the 12th but still the mutual aspect of Venus and Mercury continues. The 12th house position in Chart III and the mutual 6–8 positions between Venus and Mercury in Chart II indicated that there was no monetary benefit.

In all the three charts note the affliction of the 7th house by Mars and Kethu aspected by Rahu. Mars is the lord of the 8th from Moon the 7th lord which is an additional factor for the malignance of the combination of the incendiaries. The 7th house effects were very bad; there was dead enmity between the native and his wife. In fact it was a living death; perhaps but for the aspect of Jupiter something untoward would nave taken place. This position continued for a long time, in fact till the progressed Mars moved to Leo and Kethu moved to Gemini during the year 1954-55.

Other features like education of children, their success in examination, service matters were fairly satisfactory. Lord of 2nd in the 12th and significator of wealth debilitated with a Dwirdwadasa (2-12) position to the lord of the progressed Ascendant gave bare means of subsistence and even certain dues were delayed throughout for some reason or other.

Timing of Events

So far by way of illustration of the method. Now we propose to lay down the principle as to how to foretell coming events and time them. From the number of years to traverse one sign by progression, which are as follows:—Moon 1 7/12, Mars 6 7/12, Mercury 3 5/6, Jupiter 6 11/12, Venus 2/3, Saturn 4 11/12 and Rahu (also Kethu) 7 9/12, we can easily arrive at the progressed positions for any desired age. So also the Ascendant can be progressed at 3.076 signs per year.

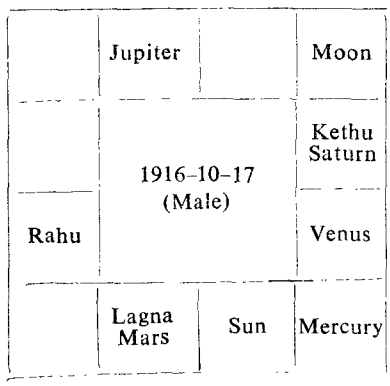
The following progressed positions with reference to their own positions in the radix chart are good:—

Moon	1, 3, 6, 7, 10, 11
Mars	1, 2, 4, 7, 8, 10, 11
Mercury	1, 3, 5, 6, 9, 10, 11, 12
Jupiter	1, 2, 3, 4, 7, 8, 10, 11
Venus	1, 2, 3, 4, 5, 8, 9, 10, 11
Saturn	3, 5, 6, 11
Rahu	1, 2, 4, 6, 8, 9, 10, 11
Kethu	3, 6, 10, 11

(*N.B.*—In the case of Sun, there being no progression, the following positions with reference to the Ascendant should be considered instead, *viz.*, 2, 3, 5, 6, 9, 10 and 11).

With the help of this, it will possible to find out when a particular significator of a Bhava will occupy by progression a favourable position to fructify its results. Having got this, determine the progressed ascendant, which when falls in an house other than 6, 8 or 12 from the birth Lagna will be generally indicative of good. This together with the progressed position of planets should enable one to fix the events in time measure.

Example



To predict the date or probable time of marriage and employment:

(a) Marriage:—Sukra is the lord of 7th and also the Kalatrakaraka. 9, 10, 11 positions with reference to himself are auspicious. Of this, 10th aptly falls in the 7th house from Lagna. Therefore the period when Venus comes to Taurus by progression is the time. Period of Venus is only 8 years. Two rotations will make 16 years. The third rotation will be the most appropriate; the number of years would therefore be 2 x 8 plus $9/12 \times 8 = 22$; in other words 22–23 age will be the time. More accurate results will be got by taking the exact degree of the planet.

(b) Employment:—The Karmakaraka is Sani (more exact will be to assign all the four Sun, Sani, Mercury, Jupiter). The best houses for Sani are 3, 5, 6, 11 and to traverse one sign by progression Sani takes 4 11/12 years. The third house will relate to boyhood period; the 5th house will relate to 20-25 years. Sani will be in Ascendant radix and form an aspect on 10th house. For the 21st year (*i.e.*, 20 years past) the Ascendant will be in Sagittarius and Saturn will be in the 12th. Taking one year more, Saturn will be in 10th from Ascendant; thus 22nd year will be the fitting period.

Periods of promotion or advancement will be when the lord of 10th in the radix occupies favourable houses from his own as also from the progressed Ascendant, unless it clashes with 6, 8 or 12 from the radix ascendant. In this case, Sun is the lord of 10th. Let us take 3 signs per year roughly as the rate for progression of Ascendant.

The Proof of Astrology

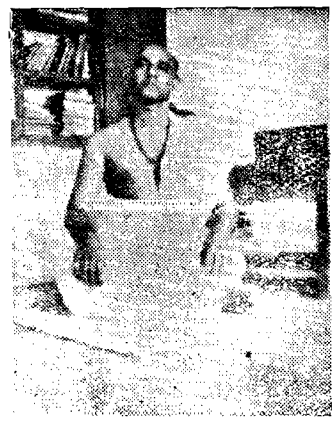
BY Y. MAHALINGA SASTRI, M.A., B.L.

"THE proof or the reproof?" asks the Cynic, "for, is there not greater reproof than proof of astrology?" Long ago, poet Nilakantha Dikshita put these words in the mouth of Satyacharya, in his drama called *Nalacharita* :—

प्रकृतिः सा किल नाम प्रमादजोयः
फलेचि संवादः ।
शतशोऽपि दृश्यमानः संवादः
काकतालीयः ॥

Satyacharya is one of the most respected ancient authorities on astrology. Varahamihira refers with deference to Satyacharya. Bhattotpala often quotes from Satyacharya. Unfortunately his work is lost to us. He stands like a colossus between the great Rishis, Parasara and Bhrigu, and the non-Rishi exponents of the science like Varahamihira. Many believe that if Satyacharya's lost works were recovered the credit of astrology might be considerably enhanced as a science. Satya is also believed to be the propounder of the Nadi system of prediction. The available Nadis deal with examples. What will not the devoted student of astrology give for the recovery of a work dealing with the principles of Nadi prediction?

Satyacharya belonged to the forgotten ages and poet Nilakantha introduced him with much aptness and with pardonable anachronism as the court astrologer of Nala, King of the Nishadha country. The life of Nala is narrated in the Mahabharata, Vana Parva. He belonged to the pre-Pandava age which is the same as pre-Vyasa age. Nilakantha Dikshita evidently thought Satyacharya so ancient as to be associated with such a hoary past. But the calumny against astrology put in his mouth sounds modern. Who does not enjoy a fling at astrology and at the same time who has not fallen a victim to its alluring charms? Astrology is beloved of the world, both petted and teased. Mr. K. S. Venkataramani who was a thoughtful contributor to modern astrology (being the author of the *Highways of Astrology*) was once approached by a gentleman with a dissembled lack of faith in astrology inconsistent with his urgent solicitude for his horos-



Y. MAHALINGA SASTRI

cope being scanned, and was harangued to abashment by the orator.

This ill-natured aspersion-mongering attitude towards astrology is inherent in humanity and is not inconsistent with its susceptibility to the allurements of the science. There is great wisdom in Bhavabhuti's saying:

यथा स्त्रीणां तथा वाचां साधुत्वे
दुर्जनो जनः ॥

The world glibly assails the reputation of women but at the same time is incapable of escaping from Eve's magic spell. Repulsion and attraction work like the ball throw and coexist.

It is sadism to treat astrology so uncharitably, but is not sadism the reflex of mental enslavement? When Satyacharya is made to deplore his profession by the poet, the latter touches the chord of an universal and eternal human trait. Thus, the hoariest of astrologers complained against the ill-natured shortsightedness of the world in its apprehension of the merits and value of the science of astrology—"When somewhere the astrologer inadvertently blunders and gives a wrong prediction, that instance is eagerly snatched at for being broadcast as proving the rule that astrology is a hoax self-confessed; while hundreds of successful predictions under the very nose of the calumniator are disposed of by him contemptuously as merely accidental coincidences like the crow perching and the palm fruit dropping down."

Much truth is compressed in these words. Firstly, the great Acharya does not lay claim to absolute infallibility for the science. Next, he attributes the lapses not to any imperfections of the science but to the inadvertence of the professor of the science. And, last but not least, he lays stress on the large volume of success which the practice of astrology has shown in all ages, which in effect furnishes the key to the mystery of its survival through the ages in the face of all arrant, malicious disparagement. The words *kila* (किल) and *nama* (नाम) are exclamations indicative of painful surprise and derision to the tune of "look at the injustice and the absurdity".

Astrology belongs to the fraternity of sciences and has been treated as such in the books. Its literature is vast and

varied. A complete mastery of it in all its ramifications is difficult of attainment. As it probes into the future of lives and as future lies in the womb of time, its practice brightens only with a spiritual ray lent to it. To release the illumination required, the practitioner must be one who has cultivated a spiritual frame of mind. He must be a man of character and piety. **His reliance upon divine grace as the source of his strength must be sincere and entire. It is needless to say that such a person will be all humility and simplicity.** A personality endowed with these marks of distinction is the *sine quo non* for the attunement of the trained intellect to spiritual levels whence proceed those instructions which guide aright the practitioner. The horoscope which furnishes the data upon which predictions have to be built is a maze pursuing which one coldly scientific and without the purer insight, gets hopelessly entangled in the meshes of his own erudition; a mystic script is presented to him for being deciphered and he racks his brains against it in vain and falters to pick up the way among the luminous bodies—and does that not look like a paradox?

To a pretender whose noise proceeds from the surface, who hops about with desperate courage and tumbles to his own shame and the amusement of others, the horoscope is an attractive plaything to dabble with. But to a sincere student, the study is most exacting and it is one to thousand that he feels his feet planted on firm ground.

Even in the case of the other sciences it cannot be claimed without some qualification that calculation never misses. The chances of error in astrology are greater for obvious reasons. Firstly, its projects comprehend a sphere above the material, the visible and the tangible. Secondly, this circumstance itself has given rise to multifarious methods of approach which make one stagger. The regions of astrology seem to lie beyond the limit to which human mind can strain itself. Hence very learned and tireless explorers were satisfied to accept results much shorter than the perfect goal. They conceded margins for the human frailties also. **It is a wonder how even with such limitations astrology has thriven and given satisfaction to a large extent to unfailing streams of its clientele throughout the ages.**

Varahamihira defines clearly the scope of the science of astrology and it contains a warning that there should be no mistakening of it. When the promise is circumscribed purposely, it is foolish to magnify expectations according to one's own fancy, on the one hand, and ridiculous, on the other hand, to turn away with disgust at the supposed failings, not to speak of the hostility of the inveterate reviler.

This colossal, pathetic ignorance which links astrology with the fatalistic notions are of foreign origin and not germane to the Indian outlook on life. Varahamihira's definition sets at rest this controversy also. Let me quote the verse which is the cornerstone of the thesis:

कर्मार्जितं पूर्वभवे सदादि यत्तस्य पक्तिं
समभिव्यनक्ति ।
in the बृहज्जातक.

यदुपजितमन्य जन्मनि शुभाशुभं तस्य
कर्मणः पक्तिं ।
व्यञ्जयति शास्त्रमेतत् तमसि द्रव्याणि
दीप इव ॥
in the लघुजातक.

Saravali explains:—

जातकमितिप्रसिद्धं यल्लोके तदिह
कीर्त्यते होरा ।
अथवा दैवविमर्शन पर्यायः
खल्वयं शब्दः ॥
अर्थार्जने सहायः पुरुषाणामापदर्णवे पोतः ।
यात्रा समये मन्त्री जातकमपहा
यनास्परः ॥

An astrologer is called *Daivagna* (दैवज्ञ) or *Daivachintaka* (दैवचिन्तक) in Sanskrit.

Daivam is some unknown thing which directs and controls human life. For one who is predominantly mundane in his outlook and limits his intellectual speculations to the known and the accountable through cold logic, it is only the chance-element which lies beyond his calculations and which plays a large part in accelerating or retarding the fruits of human endeavours and always waits round the corner to surprise him either agreeably or disagreeably.

It is God's beneficence or wrath to a non-Hindu believer. To a Hindu, whose religious beliefs are firmly rooted on the Karma theory **Daivam represents the accumulated effects of his past good deeds or misdeeds, potential in reacting upon him like a boomerang, tracking him through his rebirths and dispensing its favours and frowns in the course of his life as and when it finds opportunities of making itself felt.** *Innumerable* have been the past births of a *Jiva* (soul) and countless have been his actions which had produced the *Adrishta* or unseen potential forces which accumulated in vast storages. The propelling power for a single birth is generated by a group of the active principles of the storage which gathers the momentum for the nonce fortuitously or according to our inscrutable law. The *Jiva* takes birth with a definite credit and debit account which shall work itself out, until upon its exhaustion his earthly career ends.

The *Jiva* during his lifetime becomes responsible for more and more Karma of the good or the bad or the mixed sort and adds to the mighty storage of his past Karma. Again, the impulsion comes and he takes another birth. He cannot remain for a moment without action and action will have its inevitable rebound. Thus, the hoardings grow more and more while consumption works the negative process. This rotation is interminably repeated and is technically called *Samsara* and is compared to a wheel in the books of philosophy. The *Jiva* unable to extricate himself from the complex web with which he has surrounded himself, goes on his round helplessly, mostly believing that the fulfilment of his life is within his reach, but really being lured by the ever receding mirage. It is all an impenetrable *nexus* of darkness which is a compound of ignorance and illusion, in which he wallows sometimes conscious of his plight, but often times glutted with a false sense of security and comfortable existence. Poet Nilakantha Dikshita deplored the lot of the *Jiva* treading aimlessly and helplessly the endless path of *Samsara*, in this pathetic exclamation.

कुत आगतं नजाने क्वनुवागन्तव्यमिदमपि
न जाने ।
सञ्चरसि केदानं संसारपथे महातमसि ॥

"I do not know where I came from; neither do I know whither I am destined to go. This is all that I know at present. I am wandering in the labyrinths of *Samsara* groping in the unrelieved, all-embracing, interminable darkness (ignorance of the nature of my real being)".

The *Jiva* does not recollect who he was in his previous birth, neither can he ascertain where he will be or what he will be after death. He cannot explain why he was born in such and such place and such and such surroundings, in such and such family to such and such parents, inheriting certain definite traditions, culture and religion, all which he begins to claim as his own and cling to with tenacity when he grows up. He is unable to account for several happenings in his life, some happy and some unhappy, not always according to his expectations or having any alignment with the sort of effort he has been putting forth or aspirations he has been nourishing. In his own case and in the case of others, the problem of evil is insoluble. Striving for happiness he plunges into misery sometimes and sometimes happiness comes thronging to him to his agreeable surprise. He is puzzled to see the scheme of things unravel itself before him as if through a mysterious agency, having little or no connection with his planned endeavour. Sometimes, when he reflects, there seems to be some logical connection between certain tendencies inherent in him and certain results which he obtains, as cause and effect; but he is at a loss to know who planted these tendencies in his soul. These tendencies and certain circumstances which act as springboard to his life, make action inevitable and he works and toils reaping unpremeditated results good or bad. The momentum is supplied by the passions which are boisterous and like the winds of Ulysses are pent up in our invisible, intangible entity called the mind and having a tendency to break loose of their own accord at odd moments.

Astrology purports to be a science capable of throwing light to relieve the dense darkness through which the *Jiva* is eternally and desperately struggling, and promises to be his guide warning him of the dangers ahead and encouraging him to ply vigorously through fruitful courses indicated. Varahamihira's illustration is graphic

व्यञ्जयति शास्त्रमेतत् तमसि द्रव्याणि
दीप इव ।

This science illumines your pathway like a lamp taken with you to guide you in darkness and helps you to see which things lie on the road—it may be a treasure; it may be a cobra; it may be a pit; or it may be an eminence—a thorny bush or a flower bed. How to react and behave towards these revelations depends upon you. You are born with your *Vasanas*—you may furret for a root and neglect a gem; you may beat the cobra or invite its ire on you. You may adventure into the throny bush or seek the flower bed. Your tastes, your capacity for discernment and correct choice and a hundred other things determine your reaction to the vouchsafed illumination. But the action is yours—that is called *Purushakara* (पुरुषकार). What is already there on the pathway is due to *Daiva* (दैव).

With or without the illumination of astrology, the *Jiva* struggles on its path governed by the *Vasanas* acquired in previous births. These moral, spiritual and intellectual tastes, tendencies, abilities and equipment are also indicated in the language of the planets if only one has trained oneself to decipher it. The Western adherents of the science lay greater stress on this aspect of it and have displayed wonderful flair for investigations on that line.

Mr. K. S. Venkataramani who had a clear grasp of the subject both from the Western and the Eastern points of view, declares in his introduction to his *Highways of Astrology* as follows:—
"Properly understood and

applied, astrology is a great help to individual progress and collective welfare. It tries to interpret the temperament and tendencies, character and ability and the results arising therefrom in daily life in terms of the most probable lines of unfoldment of the latent possibilities".

Mr. Venkataramani further goes on to state that a correct knowledge of the future is a dynamic changing force—it acts magnetically on your mind and the springs of action and certainly alters the normal course of running which it would otherwise have had.

Saravali speaks in the same strain—"the horoscope is the means of *Daivavimarsana* (दैवविमर्शन) an investigation into the latent potentialities called *Daivam*, which can be helpful in the matter of one's acquisition of wealth, which can serve one as a ship to cross the ocean of calamities and which can give one the most intelligent and useful guidance for one's travels, like an expert adviser. A knowledge of the indications of the horoscope is thus a great and invaluable asset to the native who is thrust upon this earth and impelled by karmic forces to go through a drift of life under prescribed environment.

The scope for individual efforts to mitigate misery and enhance happiness is also inherently conceded in the division of Karma into three classes, namely *Dridha*, *Adridha* and *Dridhadridha*. Some karmic forces which have begun to operate on the life of the individual may be very difficult to surmount or circumvent. Others may be easily surmountable; and a third variety capable of being countered with persistent application of palliatives.

* The *Saravali* says:

दशाप्रभेदेन विचिन्तयेद्दृढं दृढेतरं
चाष्टकवर्ग गोचरैः ।
दृढादृढं योगवशेन चिन्तयेत् इतित्रिधा
जातक सूक्ष्मसंग्रहः ॥

The inclemencies of the Dasas are peremptory and hard to resist; what evil is indicated by *Ashtakavarga* and *Gochara* can be easily counteracted by means of *Pariharas* or palliatives. The yogas are more difficult to combat, but can be placated by extraordinary propitiatory processes. This dictum is an extenuation of the universal law.

अवश्यं अनुभोक्तव्यं कृतंकर्म शुभाशुभं ।
नाभुक्तं क्षीयदे कर्म कल्पकोटी शतैरपि ॥

The consequences of action good or bad can never be evaded. Action once done cannot be liquidated except by submission to its rebounds, even though eons may elapse.

A grasp of these liberal principles is necessary for a comprehension of the optimism of the Hindu attitude in the matter of the endless struggle of the human being exerting his *Purushakara* to avoid, neutralize or weaken *Pratikula daiva*. This basic notion that man is not a helpless victim to predestination but an architect of his own destiny to some extent at least, is further supported by such statements as the following :—

दशापहाराष्टकवर्गगोचरे ग्रहेषु नृणां
विषमस्थितेष्वपि ।
जपैश्च तत्प्रीतिकरैः सुकर्मभिः करोति
शान्तिं व्रतदान वन्दनैः ॥

The *Phaladeepika* in this verse upholds the validity of expiatory and propitiatory rites and ceremonies for the mitigation or avoidance of the evil results of planets maliciously disposed as rulers of Dasa periods, or in the *Ashtakavarga* and the *Gochara*. It recommends for the welfare of the native *Japakarma*, *Santhikarma*, *Vratanushtana*, *Dhana* and *Vandana* (which includes pilgrimages, prayers and dedications). Men learned in the *Pariharas* will be able to prescribe courses which are appropriate to the relevant planets and other conditions holding out the menace. It is noteworthy that Kalidasa says that Kanva made a pilgrimage to *Prabhasa Tirtha* to propitiate the contrary *Daiva* for the sake of Sakuntala.

दैवमस्याः प्रतिकूलं शमयितुं प्रभाशा
तीर्थम् गतः ।

It is further stated in *Phaladeepika* that high ethical living and spirituality can be far more effective in overcoming the evil disposition of the planets than all the ceremonial measures of remedy.

अहिंसकस्य दान्तस्य धर्मार्जितधनस्यच ।
सर्वदा नियमस्थस्य सदा सानुग्रहाग्रहाः ॥

To one who observes *Ahimsa*, who has controlled his passions, who never swerves from the path of virtue and righteousness in acquiring wealth and who regulates his life by strict rules of self-discipline, the planets invariably soften and incline to beneficence. Astrology studied with a broader outlook and not as a means to satisfy immediate curiosities and cravings and to minister to limited gratifications of short-term ambitions and aspirations, reveals itself gradually as the handmaid of *Dharma Sastra* and *Vedanta* and upholds high ethics and spiritual regeneration as the ideals of life. In that larger perspective the ennobling magnificence of the science lends a ray to the illumination of the cosmic mystery and surrounds itself with an aroma of philosophical eminence.

(*Continued on page 135*)

*(This verse is quoted in the commentaries on *Brihat Jataka* as from *Saravali*, though it is not found in the N.S.P. edition).

Astrological Significance of Basic Instincts

BY DR. W. J. TUCKER, D.SC., PH.D.

Part I: From Combat to Curiosity

IN an article entitled *The Basic Instincts of Mankind*, I introduced to astrology for the first time certain basic principles which emerge from the correspondence of the twelve signs of the zodiac with the twelve basic instincts which are:

1. *Combat* (The Aggressive Instinct) ... ... Aries
2. *Submission* (The Surrender or Acquiescence Instinct) ... ... Taurus
3. *Repulsion* (The Instinct of Aversion) ... Gemini
4. *Paternal-Maternal* (The Paternal Instinct) ... Cancer
5. *Acquisition* (The Acquisitive Instinct) ... Leo
6. *Curiosity* (The Investigatory Instinct) ... Virgo
7. *Food-seeking* (The Instinct to Assuage Physical, Mental and Spiritual Hunger) ... Libra
8. *Mating* (The Sexual Instinct) ... ... Scorpio
9. *Self-assertion* (The Evaluatory Self-Expression Instinct) ... ... Sagittarius
10. *Laughter* (The 'Sense of Honour' Instinct) ... Capricorn
11. *Construction* (The Creative Instinct) ... Aquarius
12. *Escape* (The Flight Instinct) ... ... Pisces

The above instincts comprise the *raison d'etre* of an individual. They fashion the arc of his destiny, form the bricks of his character, give vital expression to his personality, contain the seeds of his triumphs as well as of his failures, and are the causes of all his follies.

One of the fruits of the researches of Sigmund Freud and of the highly-specialised labours of his followers (the vast modern army of psycho-analysts) is the fact that certain Oedipus conflicts* which occur in the unconscious mind and which psychiatrists believe to be the direct originating causes of some forms of psycho-neuroses and psychoses, are due to inhibitions of certain of the basic instincts producing what Freud termed "repressed tendencies". Thus, the psycho-analysts act on the theory that by unravelling these buried 'memory traces' and establishing the nature and cause of their formation, the mental therapy applied by the process of psycho-analysis itself, plus the revelation to the patient of the real nature of the incidents occurring in boyhood which originated the inhibitions and complexes, will have the effect of removing the inhibitions, thus giving the repressed instinct or instincts full opportunity to express themselves freely—with the result that the patient will be cured of his psychosis or psycho-neurosis.

This sort of psychological over-specialisation, however, leads to the establishment of an implicit belief in the minds of psycho-analysts that the freeing of the instincts from all kinds of inhibitions is the real aim to be sought after. Thus, *unconsciously* the psycho-analysts come to believe in free self-expression of the instincts as a very good thing. Indeed, once they formed that conviction, they lost no time in selling the idea of the education authorities—with the result that we now have foisted upon us the 'free self-expression' ideas which have given rise to the "blackboard jungles", to the craze for "youth clubs" organised on the Nazi model in the belief that that is what is needed to solve the problem of "adjustment to society" and so make individuals "good mixtures", but which is actually promoting and encouraging the formation of Teddy boys, gangs of violent hoodlums, hooligans and vandals. Also, in the belief that it is possible to correct and adjust the Libido by teaching sex in schools instead of leaving that responsibility where it rightfully belongs, namely to the parents of the children, psychologists are witnessing the chickens coming home to roost in the almost daily instances which are coming to light revealing that children leaving the sex-class have frequently made for the nearest fields and woods in order to make a further exploration of their own and to try out the object-lesson they have been given at school.

Obviously, some very ugly fruit is in process of ripening, and signs are not wanting that psychiatrists may eventually discover that there are worse evils to be attributed to the basic instincts fashioning mankind than appear in the psychoses and psycho-neuroses with which they are familiar.

* The Oedipus complex may be described as a conglomeration of phantasies and associated effects which leave 'memory traces' in the unconscious mind derivable from alleged impulses in babyhood to have intercourse with the parent of the opposite sex. Freudists believe that the complex includes phantasies associated with the desire to destroy the rival parent. Impulses to have intercourse with the parent of the opposite sex is called a *positive* Oedipus complex, whereas impulses to have intercourse with the parent of the same sex is termed the *negative* Oedipus complex.

On the day on which I am penning these lines appear two news-items which confirm this impression.

The first is a complaint by the authorities of the Victoria and Albert Museum (in London) made by letter to the headmasters and principals of more than 50 art schools in London and the provinces, protesting against the behaviour of the students of both sexes who have broken heads of plaster casts, have been utterly careless with paint and paint-brushes, have scattered litter and clothing on the parquet flooring, have placed their feet on newly-painted cases, have emptied dirty paint water into porcelain bowls, and who have been behaving in a generally sloppy manner in the galleries. In the words of the museum spokesman: "They do not seem to have any regard or respect for works of art. *The new trend towards self-expression seems to be the cause*". And the students complained of are our modern *art* students!

The second news-item reports that Mr. J. Edgar Hoover of the Federal Bureau of Investigation has described the alarming increase in juvenile delinquency as "a national tragedy which threatens the future of America". There has been a fresh flare-up in gang warfare by youths in several large cities, particularly New York; and 42% of the country's crimes—according to Mr. Hoover—were last year committed by boys and girls under the age of 18, half of which were committed by youths under 15. All of which makes one wonder *just* how long it must be before Mr. Hoover and the education authorities wake up to the fact that it is in the craze for self-expression (?) that the cause of all this lies, and that **a perfectly simple remedy is available, namely to send the charlatan psychologists packing and to re-institute discipline in the schools. For it is the quack psychologists who are making morons of the children.**

The real point I wish to make is that certain kinds of inhibitions to the basic instincts are absolutely necessary if mankind is to continue to survive at all. In the past, the 'memory traces' producing the unconscious safeguarding inhibitions have been imparted by the religious teachings and by the censor action of the "super-ego" which laymen once used to term the conscience! **It is solely due to the widespread lapsing of religious instruction (which alone can intensify the safeguarding action of the conscience by installing inhibitions in the unconscious mind), plus the introduction into the educational sphere of the socialist philosophy of 'free self-expression', that we are now-a-days being confronted with ever-growing masses of violent ruthless individuals flowing together by virtue of the unconscious gravity which psychologists choose to call "the Social or Gregarious Instinct"** under the banners of communism and socialism.* For this combination of circumstances is producing men in whom the aggressive, repulsive and self-assertive instincts are rendered totally uninhibited in accordance with the design of the men at the top who are using such people as pawns.

In the Third Reich, Goebbels was the master-psychologist who taught Hitler that the readiest way to master the people was to destroy the Ten Commandments. Soviet Russia—ever eager to learn—speedily found out the efficacy of Goebbel's methods and incorporated the ideas in their own technique. And Communist China, not to be outdone, began to specialise in their "brain-washing" technique. All of which is psychology run mad. But, of course, any science can be misapplied, and it is open to the budding chemist to blow himself up in his laboratory if he wants to! He need only be careless in mixing nitric acid with glycerine to do the trick! But the moral of all this is that **mankind cannot afford to be any more careless with psychology than with nitroglycerine or atomic energy, for the consequences of such carelessness will be deplorable.**

In my previous article, I pointed out that the repulsion instinct lies at the root of the psychology of all individuals who make manifest an open aversion for the existing order of things in cultivating hatred of any form of institution symbolised by such key-words as "captitalism", "colonialism", "imperialism" and the like. And I would like to emphasise that what is emerging is, and must ever be, the product of the completely uninhibited expression of the repulsion instinct when its primary

* It should be unnecessary to mention that the above citation of communism and socialism is not being prompted by any form of political bias. The statement results from an objective study of the prime psychological forces which are inspiring the philosophy upon which the named creeds are based. For undeniably the compulsive instinct of adherents is the aggressive instinct and the repulsion instinct inspired by greed and envy of all persons of wealth and social distinction who thereby become targets for the individual collective and communal hatreds which are directed against them. Indeed, the intellectuals who are controlling the movements are using collectivism as a weapon; for they have unconsciously discovered psychological means for removing the unconscious censorship which inhibits the free expression of certain powerful instinctual compulsions from the minds of those they have ensnared. They call this process "indoctrination", and they re-employ the indoctrinated as instruments to indoctrinate others, shrewdly calculating to conquer and enslave all the peoples of the earth by such means.

safeguard (which laymen would term "toleration") is removed from its inhibiting task. It is the presence of this uninhibited instinct which solely accounts for the persistency of cells of communism the individuals of which, no matter whether they are working underground in our midst within the framework of trade unions, or openly in the jungle of Malaya or the swamps of Indo-China, abate not one scrap their fundamental aversion but who keep alive for ever the malice and hatred which are implicit in the instinct of repulsion.

In the matter of the combat instinct, the training of boxers is devised to remove as completely as possible any inhibitions restraining the full expression of the aggressive instinct. With the result that boxers develop the mentality of killers in the same way as commandos do who are trained to kill by means of every scientific method known to man. For boxers, as regards their mentality, are in no wise different from the old-time duellists who killed their opponent with the rapier or the sabre. There are rules to be observed in both games, but the object is the same, and the survivor is he who is least inhibited in his aggressive instinct!

Thus we have to ask ourselves the question: Can mankind afford to lose the inhibition built up in the unconscious mind by the fifth commandment: *Thou shalt not kill?* To remove that inhibition is psychology run mad.

Invariably we find the combat instinct, the repulsion instinct, and the self-assertion instinct, dominant in the horoscopes of all murderers. Dr. Buck Ruxton (born March 27, 1898) had the Sun, Mercury and Venus in Aries, directly stimulating the combat instinct. At the same time he had Saturn (jealousy) and Uranus (violence) in Sagittarius to colour the emotional urges of his self-expression instinct. And he had the Moon and Neptune in Gemini to sway the instinct of repulsion. Ruxton slew his wife for a motive of jealousy, and his maid-servant because she was a witness of his crime.

George Stoner (born November 19, 1916) had Jupiter in Aries governing the combat instinct—a planetary influence capable of facilitating the erection of a safeguarding inhibition had he but had an ounce of religious instruction. But he had Mars in Sagittarius—a planet which gave the emotional colouring of lust to the self-assertion instinct; and he had Saturn (jealousy) in Leo, the sign which controls the acquisitive instinct, the influence of which induced him to regard Rattenbury's wife as his own (Stoner's) special property! In a jealous fit, Stoner slew his employer Rattenbury because he could not bear the idea of allowing Rattenbury to depart on holiday with his wife!

The mass-murderer John Halliday Chrisite had the Sun and Mercury in Aries (combat instinct). But he had Venus and the Moon in Pisces (escape instinct). For that reason, Christie's killer instinct was to some extent inhibited. Although a strangler, he was yet unable to apply direct violence to dispose of his victims and had first to stupefy them with gas. Furthermore, his escape instinct obliged him to pre-determine the means for escaping detection by concealing the bodies, even if this meant giving evidence against a man on trial for his life for a murder in which Christie had undoubtedly participated as accomplice. Also Christie had Saturn and Uranus in Sagittarius, betraying the emotional colouring of his self-assertion instinct which was that of a Freudian psychopath.

At this point it is perhaps pertinent to inform readers unversed in psychology that the basic instincts and the inhibitions controlling them, are both unconscious. They belong to the unconscious mind and transit their effects in the form of powerful compulsion which cannot always be modified or controlled by the conscious mind. For the real controller is the unconscious censor whose job it is to interpose the right inhibitions. However, when all inhibitions are removed from a basic instinct (as sometimes happens in certain forms of insanity) anything can happen—such as when a maniac accuses a neighbour of turning on the radio for the purpose of destroying him by wireless waves, and then proceeds to smash the radio and attack the neighbour—moved by the powerful compulsion of the aggressive instinct. And it may be remarked that the compulsion can develop an incredibly powerful form is the instinct be at the same time reinforced by the emotion of hate. Under such circumstances it is of no use to argue that the maniac could have controlled his frenzy by means of his conscious mind, because any such idea is fallacious. The real brake is the unconscious censor; and if that censor has taken leave of absence when he is most needed, it is just too bad. However, it is precisely because the action of the charlatanical psychologists who have urged upon the education authorities the efficacy of their "free self-expression" ideas is having the pernicious effect of removing certain important inhibitions which it is the function of the unconscious censor to impose, thus paving the way for the unbridled release of powerful compulsions emanating from certain basic instincts, that it

becomes necessary to oppose such teachings resolutely.

Let us now consider the submission instinct. We will begin by enquiring whether it is good to remove all the inhibitions interposed by the unconscious censor devised to tone down the expression of this instinct.

Some may argue that it is good for a man to be resigned to his lot and in that way to become submissive to any form of constituted authority. However, those who argue that way have never had experience of persons whose spirit has been broken. They have never witnessed a group of dispirited slaves; for if they had, their idea of submission would no longer rank as a notion of heaven. They would indeed discover that there are worse ills which can afflict mankind than those brought about by rebels and men of spirit—bad as the latter may be. Those who have seen people shoved around, ordered about, restricted in all directions by means of prohibitions, verbots, licence controls, property seizures, dispossessions, unjust and unsupportable taxation, etc., are witnessing a cowed and browbeaten people whose inhibitions devised to protect them against the full force of the submission instinct have been removed through acquiescence in the socialist philosophy which has been designed to achieve that end and purpose. Thus, individuals who are in the grip of the full force of this powerful compulsive (unconscious) urge become moral cowards and spineless individuals who will not say boo to a goose.

Peter Simple, in his *Daily Telegraph* column *Way of the World*, has written a brilliant pen-portrait of the type:

"Fond as I am of foreigners, I think our overseas visitors have *let us down*.

"After the war we expected great things of them. They were to do all the things we daren't do; they were to grumble and complain incessantly; they were fearlessly to demand meals at all hours of the day, cold beer and hot soup; they were to send back nasty food; they were to raise hell about insane licensing laws, filthy railway carriages and station buffets and shops which open only at brief and irregular intervals. And we hoped to sit back and reap the benefit. Alas, instead of the proud and intrepid liberators we had imagined, we are confronted by men of much the same kidney as ourselves, as meek, timid and long-suffering, as polite and unassuming, as easily cowed and browbeaten. Like us, they are herded about, pushed around, moved along, turned out, shut out, locked out. Like us, they seem gluttons for punishment; they kiss the rod and come back for more."

Dear old "patient" Taurus has a lot to answer for!

Let us pass on to consideration of the repulsion instinct which comes under the jurisdiction of Gemini. Right from the cradle we imbibe all the notions of the pet aversions of our parents; and these impressions leave 'memory traces' in our unconscious mind which shape the pattern of the unconscious censor. If our parents are religious, we have it impressed upon us that such and such an action is sinful, such and such a person is undesirable as a companion, such and such an institution is hateful. "Fear God, and shun the devil", is the slogan to which the unconscious censor is obedient in repressing condingly the repulsion instinct for the future. Thus, when we encounter things, conditions or people, which symbolise undesirable or hated objects, our repulsion instinct comes automatically and unconsciously into operation. For all other objects, however, because of the unconscious censor, the instinct remains unaffected.

Can we safely remove all forms of inhibition from the repulsion instinct *via* suppression of the unconscious censor? If we do, we get as product a thoroughly spiteful, malicious and odious goblin. Or, if the object of the aversion is women, we get the misogynist (Saturn-conjunction-Moon in Gemini sometimes produces this type of male). Or, if the object of the hatred is learning, we get the misologist (Saturn-conjunction-Mars in Gemini can produce this species). Or, if novelty be the objective, we get the misoneist (Mars-conjunction-Uranus in Gemini).

Quite obviously, the unconscious censor is vitally necessary for the inhibition of this instinct; but, of course, not for its total suppression. The censorship has to be built up from the receipt of properly-conceived impressions designed to channel the repulsions (and the emotional form of hatred which may accompany them) against proper objects deserving of contumely—against the purveyors of vice and corruption, for example; against forces which are working to achieve the downfall and degradation of man. You can call this process *sublimation* if you like; but the real responsibility for the channelling of the repulsions in the right directions rests with the unconscious censor.

We now turn to the parental instinct which lies under the influence and control of Cancer. This is the instinct which connects the parent to the child, and

Astrology and Theology

BY DR. C. KUNHAN RAJA, M.A., PH.D.

THERE are two beliefs that are found to have been common among all the races and among all the people in the world from the beginning of man's history. One is a belief in some influence extorted by objects outside of man and by objects above the earth, on the life of man on earth; the other is a belief in some Great power in the world that controls the life of man; this power is accepted as the creator of the world also. There are accepted some persons in the community who can be in contact with the objects outside that can exert an influence on the life of man, and also some persons who can be in direct communion with that power that created the world and that controls the world; and such persons are followed by others who understand, guard and propagate the will of that power. The first of these two beliefs is a part of the second, and yet it has developed into a separate system, a distinct discipline of knowledge, known as astrology. The other, which is the wider, has grown into religion.

Both the beliefs ruled over the life of man for millenniums; there was no nation, and no civilization either, where these two aspects of man's beliefs did not exert their influence on life. It is claimed that in our modern times, both have been subdued by science, which has saved man from the tyranies of external forces and which has installed man in an exalted position of freedom. It may be that religion has met with a defeat at the hands of science; but it is very doubtful whether astrology has been a victim of any such defeat. Religion did not develop on rational and scientific lines, and as such it could not withstand the onslaught of rationalistic science. But astrology was always a science, though it has its affinities with religion, and in our own modern days of rationalistic science, astrology is only gaining strength as a science, and has not had to pay any penalty for association with religion. It may be that there are many scientists who do not accept astrology as a science;

C. KUNHAN RAJA

but recognition is one thing and status is another thing. Astrology has the latter while it may not have the former at the hands of all scientists. **But astrology has a recognition which is a far more potent factor in man's life than what even some of the recognised sciences do not have, and that recognition is "Public Acceptance".**

I have not known a public journal devoting any part of it for propaganda in favour of religion and for the elucidation of the principle of religion. But there are many journals which devote some space at regular intervals for giving information about astrological data, giving periodical forecasts about the future happenings of individuals born on specific days. The journals are not what are owned by sentimental agencies to popularise and maintain a superstition. They are all ordinary, respected organs of public opinion, recognised as such by the public and by the State, and also in foreign countries. Unless people read such entries and take interest in them, no journal will waste any part of the journal for such a purpose, and the interest is not that of a pastime or relaxation; people are interested in the entries because they help them in their daily life as a guide regarding the lines in which they should function and regarding the dates and times when such undertakings would be fruitful or purposeless. Such astrological columns serve a purpose as important as *advertisements* in journals. If we can get an accurate census, it will be found that **the meteorological announcements forecasting weather conditions do not serve the same useful purpose to the public as such astrological forecasts. And can it be that all such announcements based on astrological calculations are frauds and that all the people who make use of them are victims of an organised dupe?**

Religion suffered because religions departed from the paths of sciences. In the beginning, both religion and astrology might have become current among the people through faith and through beliefs without any rational element in their progress. Religion refused to adapt itself to the growing needs of rationalism brought about by the progress of scientific thoughts. Religion continued

to be based on physical force—"Accept this religion or there is the sword which will remove the head from the neck or there are instruments of torture like fire and dungeon to compel an acceptance of religion." Religion failed to help humanity in man's life; it ceased to be a force for man's advancement. Religion even brought calamities to man. Instead of man surrendering to the Will of God, God became subject to the protection of man, and God's will was determined by man. Instead of religion controlling and regulating man's life, man began to control and regulate religion. That is why we find that religion collapsed before science. Such a religion is only *Theology* and not *Theo-logy*. But astrology ever remained astro-logy. The latter element in both the terms presupposes study, investigation, critical approach, clear understanding—all leading to conviction, as opposed to belief based on blind faith.

When we understand the two terms in this way, then it will be found that Theology and Astrology are only the two phases of the same system of thought, of the same discipline. In India, theology developed as a rationalistic system of thought, and so was astrology. Both went side by side as sciences, as Vedas. The fundamental basis is the doctrine that the whole universe is an organism in which each part is related to every other part in a systematic way and that there is neither an accident nor a personal caprice in any event in the world. The investigation into the ultimate principle of this organic system of the Universe is religion, and the investigation into the relation and influence of any part to any other part is carried on in astrology. I do not know whether I can say that religion is the physiology while astrology is the anatomy of the world organism. I can assert without any fear of contradiction that both religion and astrology refer to the same subject-matter, only they have different aspects within their respective spheres.

In India, both religion and astrology developed as a result of the operation of a rationalistic intellect, as a result of the efforts of thinking minds, to find out order and system in the world where sometimes man is faced with what appear to be mere chances and of even freaks in nature. If there had been only chances in nature there would have developed no science; if, on the other hand, everything is found and experienced as orderly in the world, then too there is no scope for a science to grow. But man experiences some kind of systematic order in the events of the world to a great extent, while man is not able to find the same system in a large number of other cases. A rationalistic mind, a scientific genius, postulates a theory that what is found as order in nature must be the real feature in the world and what are experienced as accidents and as freaks must have appeared so as a result of the limitations of man's mind. There is another feeling inherent in all rationalistic minds that man's mind is capable of understanding everything that is real in the world, and that to speak of things beyond man's mental powers in an absolute way is a contradiction in terms. If there is an order and a system in the whole world, that is what is meant by saying that the world is an organic system. The investigation into this system as a whole culminated in a rationalistic system of religious thought in India and the investigation into the relation of parts of this system to the other parts, especially the relation of the parts nearest to man, to parts far removed, developed into the science of astrology.

If science does not recognise astrology as a science, the defect is with science and not with astrology. There is no astrology without a doctrine of the whole of the Universe being held together into an organic unity by some super-intelligence. But moden science does not even accept intelligence as anything of importance in the constitution and in the operations of the world. Life is an accident and intelligence is only an aspect of this accident, according to science. Science may proclaim itself as the saviour of humanity from the clutches of religion and church and priestly heirarchy. But modern science is only an aspect of the obsessions of old religions, so far as various theories of the science are concerned, and this insignificance of man is one such theory which is only a survival and continuation of religious beliefs. There is also the political background that helped the religious beliefs to be preserved and continued in modern sciences.

According to some religions, man is subordinate to God and man as such has no independent place in the world. Man is only on this earth that has been created by God, according to such a religion; beyond of the earth it is all the region of angels and other super-natural beings. In politics also, the Emperor alone counts and the life of the individual is subject to the whims of the Emperor, according to the conditions that obtained in the regions where modern sciences are growing. In such a political set-up, man and his affairs are confined to his home, and beyond of that, it is the sphere of the Emperor in which man has no hand. It is the accumulation of such reli-

gious beliefs and political practices that has resulted in many a theory in modern science relating to man and his life.

I do not know whether the conditions, religious and political (both were held together side by side through mutual cooperation) that prevailed in the countries where modern sciences have their origin and early growth, prior to the advent of science, had at any earlier times prevailed on the Indian soil. There is no record on the authority of which such a question can be answered. All that we know from the earliest records found relating to India, is that there was no time either recorded or to be deduced from the records, when in India, man was subordinate to any external agency, either in heaven or on earth. Even in the earliest literary records in India, man's supremacy is recognised, and this is what can be deduced from such records regarding the conditions of much earlier period extending over a very long time. There are powers other than man in the world; there may be Gods. But Gods were as much under the law of the world as men, and man was not subordinate to any power other than such law of the world.

There is no difference in kind between man's intellectual powers and any super-intellect that may have planned and worked out the world design. There may be a difference in range. Man can design and execute; similarly, some super-intelligence might have had a plan for the world order and may also have worked out the design. If there is such a super-intelligenee, that is only a part of the Universe and not something outside of the Universe and dominating the Universe. That super-intelligence, if there is such a one, is self-disciplined from within itself, and all the separate intelligences exhibiting themselves as human intelligences, are only manifestations of that super-intelligence and its operations. When sciences developed in such a soil, sciences took shapes far different from the sciences of today that grew up and took shape in soils with different manures and different climatic conditions. In lands where the yields are limited, any exuberant growth may be suspected as abnormalities. That is the present view about astrology in the eyes of modern scientists. **Religion and astrology in India exhibit features of the luxuriant growth of human intellect with rationalism and with a sense of freedom, and should not be mixed up with obsessions and superstitions that have grown up in other regions.**

It is not a National Science that is being developed in the National Laboratories of India; they are working on some outworn beliefs in an alien science in the National Laboratories. The alien science is tinged with the religious beliefs and political practices of an earlier period in those alien regions. "I am right, my party is right; all others are wrong." This is an inherent element in political practices, and in science also we find the belief that what is called life is only on our earth and everything else in the universe form the objective reality. The only difference is in the relative importance; in politics the "I" and the "My Party" are important while in science life on this earth is of no moment. There is a National Science which is not allowed entry into our National Laboratories. And nothing better can be expected when the destinies of the nation are placed in the hands of persons who are Indian only by name and nativity, while they are foreign in training and ideals and in the make of the personality.

I am not a sentimentalist to worship things "National" as a Fetish. I have never countenanced the propagonda for the development of National Medicine, the *Ayurvedam*, as a separate disciple distinct from medical science. What I want is only this that there are to be recognised certain achievements by our ancients within the field of the medical science and that such aspects of the science must be correlated to the study of the science as an entirety. I do not want the Indian medical system to be developed distinct from general medical system. In general science also, there is a possible "National Aspect" brought about by the environment in which the scientific enterprises in the country were undertaken and were developed. **Modern science developed in a certain environment alien to the Indian environment of rationalism and freedom, and to this extent the sciences developed in our National Laboratories are alien sciences.**

A change over in our National Laboratories from the alien set-up to a national set-up is productive of various beneficial results to both sciences and humanity. Science now knows only certain behaviours, certain movements and changes, and does not know the whence and the why and the whither of those behaviours. Such factors come within the purview of only man's intellect directly in contact with the things, and not at all within the purview of apparatus, however perfect they be. If man and his life and his intellect are only accidents in the structure of the Universe, it is well known that accidents cannot grasp things that are absolute in their nature. Intellect aided by instruments can grasp only the surface of things and not the things themselves. If

man's intellect is identical with the absolute in the form of a super-intellect that designed the world and that works out the design, or if at least man's intellect is a manifestation of that super-intellect, then and then alone man's intellect has a chance and a possibility of knowing the things as they are. And if some super-intellect is accepted behind the world-phenomena as a whole, then one cannot resist the advent of Astrology and Theology as among the most honoured of sciences. And I have already said that Astrology and Theology are only different sides of the same truth.

There is no system of thought in India that does not accept such a super-intellect behind the phenomena of the world as a whole. There may be differences in details, but on the absolute question they are all agreed. It is an investigation into the nature of man's experience that led to the postulaion of a super-intellect behind the phenomena of the world. Either we must say, as modern science asserts, that man's intellect is an accident and as such is not a basis for any deductions about things beyond the normal experience of man, or we must assert that just as in man's normal experience it is found that all movements have to be traced to human initiative, there must be some initiative in the form of some super-intellect that has started the world process.

With such a background let me try to explain how a National Laboratory can tackle the problem of atoms. It was Democritus who first propounded the very crude theory of atoms as the ultimate basis of the material world. His doctrine was discarded by Aristotle and other later Greek philosophers; but the theory was revived, and till very recently the atom was accepted in sciences as the smallest particle of matter. In our own day, the atom has been split up, and we have electrons and other forms as the smallest material particle. Now, one has to ask the question whether, at least theoretically, an electron cannot be split up into smaller parts. Scientists say that an electron has a size, spacial extension, and they speak of the size of an electron in terms of the size of ordinary material objects. An electron can be indivisible if an electron by its very nature is proved to be so. But what has a size cannot, by that nature, be indivisible; it must be otherwise. Size means an inside and an outside, a right and a left, a front and a back, and a top and a bottom. When there is, thus, a middle between extensions, there must be the theoretical possibility of a further division into at least eight parts. Or scientists must say that at the stage of an electron, matter has been split up into parts that have lost their spacial extension.

Or, the impossibility of further division must be due to the limitations of human ability to continue the process of division any further. But is human limitation the test for an objective nature? What was not possible, the division of an atom, became a possibility; why should not a further division be possible at some later stage? The limitation of man's ability to break up an atom was due to the fact that nothing by way of a tool was available that could penetrate through the infinitesimally small interval between an electron and and an electron within an atom. But a particular ray was found capable of doing this. Why should not man's intellect devise means for sending a new dagger even through the theoretically possible, parts of the electrons?

According to Indian rationalism, a further division of a material particle by man becomes impossible only when the parts cease to have spacial extension. That does not mean that such a part has no parts of its own of which it is a composite; it means simply that man's ability stops with the diappearance of spacial extension. When a material object is divided into parts, the division is into numerical fractions. But the spacial extension is reduced through a process of subtraction. When there is a reduction of anything into fractions, there is no stage when we arrive at a zero; when the reduction is through a process of subtraction, a stage of zero is inevitable. Thus, when the matter can have parts, its spacial extension can cease to exist. The parts of what has parts, must have parts of their own. Who can handle the parts of the minutest particle devoid of spacial extension to bring them together and form a new whole from those parts? Even a part at the stage when a further division deprives the parts of spacial extension is an effect of its own further parts. Who produced this smallest material particle with a spacial extension, out of its parts that do not have spacial extension themselves? It cannot be man. Who moved the parts to one another so that the effect is produced, who holds them together?

We can plant a tree or a creeper, we can water them, manure them, protect them from weather and do various things to produce some ultimate effects. But can we produce a leaf? How is the matter called a leaf produced and who produced it? It is not merely an absorption of the particles of matter scattered in the air by the plant or the tree. There is a conversion of what was not matter with spacial extension into gross matter with spacial extension and with life. It may be said that this is a natural phenomenon; in the

Precession and Indian Eras

BY M. V. RAMAKRISHNAN, M.A., L.T.

THE zodiacal shift of the year beginning with the vernal equinox had been known to the ancient Hindus long, long before it was discovered by the Western astronomers. Keen observers of the heavens as our ancients were, they noted at the commencement of every season what particular asterism or *nakshatra* was rising before dawn, and located the Sun's position *two nakshatras* away. If the spring season commenced with the rising of the Krittikas before dawn, it meant that the equinox was in the Mrigasira *nakshatra*. As they made the observations over thousands of years they found that the vernal equinox was sometimes in Mrigasira, sometimes in Rohini, sometimes in Krittika, sometimes in Bharani and sometimes in Aswini. References there are in abundance in the Vedic literature to this backward march of the vernal equinox along the zodiac, though some of them are put in a legendary garb. The legend of the Mrigasira (or Orion) constellation points distinctly to this phenomenon. Our ancient scriptures give the Sun's position at the commencement of the spring and other seasons at different epochs. We have been told that the vernal equinox was in Punarvasu in about 6000 B.C.; it was in Mrigasira about 4300 B.C.; it was in Rohini about 3500 B.C.; in the Krittikas about 3100 B.C.; in Bharani about 1500 B.C.; and in Aswini in the fifth century A.D.

Not only are there references in our ancient scriptures to this phenomenon, but there are given sufficient data from which to determine the rate. The Siddhantas give such an accurate value as 54″ per year as against 50″ per year calculated according to modern mathematical methods. The system of *Yugas* and *Mahayugas*, *Manwantras* and *Kalpas* was based on the rate of precession of the equinoxes. The precessional rate as determined by Parasara is 46″.5 and that by Aryabhata 46″.2. The period of one revolution of the equinoctial points through the whole of 360° would be 27870 150/155 years according to Parasara and 28051 146/154 years according to Aryabhata. Both of these give the same whole number of 4,320,000 years, which our ancients called a Mahayuga. They also found this to be the period during which the Sun, the Moon and the planets and their nodes performed a whole number of revolutions. The Kaliyuga is a tenth of a Mahayuga: the Dwapara Yuga twice the Kali; the Tretha thrice and Krita four times the Kaliyuga. These four yugas constitute a Mahayuga. At each of the commencing yugas or epochs the Hindu astronomers considered the celestial bodies, the Sun, the Moon and the planets, to be in conjunction. The Siddhantas mention the number of revolutions of the Sun, the Moon and the planets in a Mahayuga (4,320,000 years) and in a Kalpa (4,320,000,000 years). Thus, these huge intervals of time have been based by the ancient Hindus on their newly acquired knowledge of the precessional rate of the equinoxes.

The Saptarishi Yuga, or the cycle of the Seven Rishis, has also for its basis this precessional rate. The equinoctial points, as calculated by our forefathers, complete one revolution of the ecliptic in roughly 27,000 years; and there are 27 nakshatras in the lunar zodiac, each covering 13° 20′ of the ecliptic. The precessional rate thus comes to 1,000 years for one nakshatra. As the equinoctial points have this backward march at the rate of 1,000 years for one nakshatra, the solstitial points likewise have this backward march at the same rate. The solstitial colour meets the ecliptic and also the equator at different points at different times owing to this precession. The distance between Marichi, the tail star of the Saptarishis and the middle point of the first two stars Pulaha and Kratu of the same constellation measured along the celestial equator is roughly 36°, which is a tenth of the circumference of the ecliptic. The time taken by the solstices (as well as the equinoxes) to cover this distance is 2,700 years. This distance is divided into 27 equal parts, which are named after the 27 nakshatras. The time taken by the solstices to trace each of these parts is thus 100 years. In the Rig Veda this is referred to as the centennial motion of the Rishis. The Seven Rishis, which are the stars of Ursa Major were supposed to remain for one century in each of the 27 nakshatras. It has been stated in our Puranas that the Saptarishis were in Magha for 100 years at the time of Yudhistira. The meaning is that the solstitial colure passed through Magha nakshatra and remained so in Magha for 100 years. Thus, the cycle of the Seven Rishis and the various yugas have all for their basis the precession of the equinoxes and the rate of such precession, as calculated by our ancients.

ASTROLOGY AND THEOLOGY

(Continued from page 68)

course of material evolution there arose what is called bio-chemical matter, and under certain conditions of the radiation of ultra-violet rays from the Sun into the earth's surface, the bio-chemical matter acquired the new feature of life and became "cells". The condition disappeared as the ultra-violet rays cannot now reach the earth, being absorbed by the atmosphere filled with material particles. Many puzzling questions will arise if such a position is taken up. The only satisfactory answer for a true rationalist is that corresponding to man who can plant the tree and water it and manure it and protect it, **there must be some power that can combine parts that had no spacial extension into matter with spacial extension, and also a power that can infuse life phenomenon into matter.**

The existence of such a universal power behind phenomena that are beyond the capacities of man is a natural deduction from the facts observed within the field that can be controlled by man; it is only a rationalistic extension of knowledge within observation into regions beyond observation, through reason. Here, in this process of extending a law from experience to regions beyond experience, there is a difficulty. All agencies with intellect within our experience are embodied; is that universal agency also embodied; and if so, how was that body produced? The agent behind the production of that body of the universal agent cannot be an embodied agent. Here the rationalistic thought of India has parted ways and the two parties have their own explanation.

One answer is that within the sphere of the causal aggregate there are three kinds of facts, among which only certain facts, and not all, come really within the scope of the true causal aggregate; the others are intimately related to the facts of the true causal aggregate in their own nature and not in their nature as causes. Even among what come within the real causal aggregate there are facts that form only certain conditioning factors which are not causes but through which alone the causes can operate to produce the effect. A body is found associated associated with all agents who handle material effects that have a spacial extension; that does not mean that all agents must be embodied. There can be an agent that handles matter without spacial extension, who need not have a body to function as an agent. Thus the body is not an absolute necessity in all agents that produce an effect; a body is a necessity only in an agent who handles and produces material effects that have a spacial extension. This is one position.

Body is a conditioning factor associated with all agents and it is only an embodied intelligence that can function as an agent. So, agency in the matter of producing effects is to be restricted to embodied ones. It is not necessary that in so far as all effects are found produced by an agent as one among the causes, the whole world as a unit too must have an agent as a common factor. The changes in the world take place according to a universal law. There can be intelligences attached to all material objects. It is not necessary to postulate a universal agent; an infinite number of intelligences will serve the situation that we have to explain. We must draw a distinction between an eternal law and an agent that operates according to that law. If there is a universal agent, there are various difficulties; the law itself must be a creation and the question of a "why" steps in.

In both of the positions thus taken by the rationalists of India, there is no real creation and no real creator. Matter is not created; matter is always there. What takes place in the phenomenon of evolution in the world is that matter is put into various "forms", and such "forms" are also eternal. That is our experience so far as tangible effects are concerned. No agent creates the material nor the form; all agents put the matter into a form, both matter and form having been there. As between the two positions taken up relating to the question of an agent, the real difference is that one position draws a distinction between the infinite number of embodied agents and a single, unembodied, universal super-agent, while in the other position there is only one type of intelligent agents represented by man and there is nothing that is really different from and superior to man. The world according to both is dynamic; either it is a machine controlled by a single agent with a large number of sub-agents working in each part of the machine, or the world is a machine operated by a large number of agents according to a universal law; no agent of that nature knows that law as a whole and there is no super-man, there is no omniscient. In both the positions, each part is related to the others in the world as a whole. There is scope of theology only in the position where a universal agent in the form of a super-intelligence is accepted. In the other position, there is only a study and understanding of a law. But astrology is common to both the positions.

If the National Laboratories can start on a new process of investigation with the background of this kind of National

Aryan Myths, Legends and Traditions in the Bible

BY ROBERT YAGER

IT is usual for modern scholarship to laugh and deride the traditions to be found in all sacred books of religion and to dismiss them as mere legends and myths of little or no value. To the materialistic type of mind a literal interpretation is demanded, and if this cannot be given, or if it fails in the materialistic form which it then assumes to be rational of interpretation, it is taken to be proof that the stories are pure fiction of no value whatsoever and further evidence that religion is simply a superstitious practice handed down from the childhood of the race.

There are two sets of facts which, however, appear from a sympathetic and yet scholarly approach to these problems, which lead to quite a different interpretation of the phenomena and material under discussion. These seem to us to fall into the categories of *either* supernatural knowledge, *or* of ancient natural lore.

The first, naturally, belongs to all the higher religions, and while opponents of religion would seek to equate it with the gullible superstitions which might belong to an age of animism, in which every wind that stirs a leaf on a tree is a spirit, more often malefic than benefic, we cannot accept that point of view. Normally the super-natural falls into *miracles*, which, as such, we have no intention of dealing now as it raises too many problems to discuss at short length or else it concerns *prophecies*. Of these, there are prophecies concerning the future. Thus the whole range of the Old Testment, that is the pre-Christian half of the Bible, is concerned with prophecies which concern, in some way or another, the coming of Christ. While both Old and New Testament (the latter being the part written in the light of Christ's teachings) concern the general current of world events. Among these prophecies are those which concern the end of the age, and they have many parallels which can be drawn from other religious works, and also from prophetic writers like Nostradamus, Bishop Malachi and others. For instance in this class of foreseeing there is envisaged the great conflagration at the end of the age, which it is reasonable to equate with the end of the Pisces cycle in the precession of the equinoxes and so somewhere about 2,000 years after the advent of Christ. In specific terms some of the seers of the Old Testament in particular laid down that they foresaw a great conflict, when Rosh, Tubal and Magog, a great northern power, all riding on horses (presumably meaning mobile, and so mechanised) would come down upon Palestine, and be joined with Egypt against Israel. Israel would have as her allies Tarshish and the ships thereof, and the Isles. These terms are frequently found historically and there is no doubt that they refer to the maritime powers of Europe, of the Western Mediterranean and beyond through the Pillars of Hercules, Gibraltar, and so the Western Powers. The northern hosts are depicted as essentially evil, and with the superiority, and yet they are to be overthrown, for God is with Israel and her allies. **How significant is such an alignment of powers with the present world situation it is not difficult to envisage.** In addition, while the Bible looks back to world-wide destruction in the past by a flood of waters, the destruction which is to take place at this time is to be on an unprecedented scale, and with *Fire*. Nostradamus apparently alludes to the same events, and he considers that about 2000 A.D. terror will be let loose from the skies, and that will be the end of the age.

It is not our purpose to deal with these, and other prophecies, and to interpret them. They are mentioned, because they must be of interest to all readers of THE ASTROLOGICAL MAGAZINE and also because they illustrate a part of that super-natural material of which sacred books are often composed. It is highly irrational, it is not capable of being tested by scientific or any other material means, as they concern future events, and can only be compared with facts once they have been fulfilled. Even so, when that has taken place, the fulfilments will be disputed by the materialist who will wish to find some reason for not believing that it is possible to forecast the future by means which differ from those, say of meteorology, which he can test and weigh. For that reason, while there is plenty of prophetic material pointing to the coming of Christ, and his birth in Bethlehem of a virgin, and so forth, it is challenged at all points. Furthermore, although Christ clearly forecast the fall of Jerusalem under Titus, this is challenged by the argument that Christ never existed at all (a statement being made very difficult to be upheld by the latest discoveries in Palestine) or that the statements were written after the events.

An acquaintance with psychic phenomena, with astrology, with the forecasts of Nostradamus and Bishop Malachi, to whom we have already alluded, will

leave very little doubt in most unprejudiced persons' minds that **there are certain highly gifted, and sensitive men, of devout learning, who have had the power to foresee the future.**

However, what is not usually realised is that there is equally an ability to see the past. This is particularly true when we come to analyse the traditional material in the earlier part of Genesis, the first book of the Bible which deals with the beginnings of things on this earth, and man.

Therefore, not only is there the whole of the traditional lore of remote periods enshrined, often in a hidden manner, and much overlaid, and sometimes distorted by successive editings, in ancient scriptures of all the ancient and higher civilisations, but, at any rate, in *Genesis.

There is something more. There are statements made, which could not be put forward if there was not something more than the available knowledge at the time of their writing.

The scriptures of which we speak were written down in their present edited form perhaps by the 6th century B.C. But in previously oral tradition, if not in written forms they are immeasurably older. For instance, it can be shown that the ethnology which appears in the Tenth Chapter of Genesis reflects a period of around 2000 B.C. The principal character of this book, in its latter parts at any rate, is Abraham, and he dates from near the same time.

Thus it is clear that we are dealing with books which belong long before the age of scientific knowledge concerning the past. Consequently it was quite impossible for their writers to have either archaeological or geological data to guide them.

That being so, it is of interest to consider briefly certain rather important facts.

Primitive man, living in Eurasia, and mainly away from the seas, could well be pardoned for concluding that as he was a land creature himself the earth started first with the land. Then, at some later time the Creator of all he saw and knew, produced water and the seas. This would be the most natural of all assumptions, as man must reason from what he knows. But the writer opens the Book of Genesis, the first book of the Bible, with the grandly and penetrating perceptive words—

> In the beginning God created the heaven and the earth. And the earth was without form and void; and darkness was upon *the face of the deep.* And the Spirit of God moved *upon the face of the waters.*

Here then we have the picture of what the writer of Genesis saw. A shapeless mass of earth without life, and entirely water covered: formless and void, with the Spirit of the Creator alone moving over this mass and bringing life and order into it.

It is a sublimely true picture, which we know from Geology and Biology to have been the first state of the earth. But it is not one which could have been glimpsed or guessed at without *inspiration* before the 19th century.

Next we learn that—

> And God said, Let the waters under the heaven be gathered together unto one place, and let the dry land appear; and it was so.

After the appearance of dry land there then come successive acts of creation.

Now natural man, looking around himself, with little deep knowledge of the past, and none of it scientific, would be inclined to reason that he was the highest and first of all creative acts, and then to meet his needs would God create, after him, the animals he needed, then the trees and the herbs for his use, and those of the beasts which fed and served him, and lastly the fish and the sea in which they should swim. From the standpoint of early man that would be the natural and logical order of creative events, and if all ancient books of scriptures started that way we should not be surprised since to early man such an order would be intensely logical. We ourselves know it is the reverse of the true order, and we know that from geology, and its work in the 19th century. But the writer of Genesis 4,000 years ago knew it was not true, and so he sets out the reverse order, and thus we learn that—

> And God said, Let the earth bring forth grass, the herb yielding seed, and the fruit tree yielding fruit after his kind, whose seed is in itself, upon the earth; and it was so.
>
> Later we learn,
>
> And God said, Let the waters bring forth abundantly the moving creatures that have life, and fowl that may fly above the earth in the open firmament of heave.
>
> We then read,
>
> And God made the beast of the earth after his kind, and cattle after their kind, and everything that creepeth upon the earth after his kind: and God saw that it was good.
>
> And God said, Let us make man in our image, after our likeness; and let them have dominion over the fish of the sea, and over the fowl of the air, and over the cattle, and over all the earth, and over every creeping thing that creepeth upon the earth.
>
> So God created man in his own image, in the image of God created he him; male and female created he them.

We see in these verses a clear grasp of certain essential facts, which were that in spite of man's position, he was the last of the creative acts, that vegetable life

---

* I cannot speak for other books as I have not studied them adequately in this respect.

came first, preceding fish, reptiles and birds, and then followed mammals, and last of all man.

Whatever anomalies there may be in Genesis, how could the reversal of the whole order of creation, as it must have seemed to man, filled as he always is with his natural self-centered approach to everything, have been recorded if there had not been some creative power, which we call God, to inspire certain prophets and scribes to record the order of creation 4,000 years before the geologists' hammers were to reveal the true order?

Another thing which becomes apparent from this logical, and when the time of its writing down is considered, highly scientific approach to the subject of creation. The whole spirit of this account is not semitic, despite the fact that the account in its original is recorded in a semitic language—Hebrew. If we have to search for the scientific spirit, such as it is in its embryonic state, at the beginning of reflective thinking, it is to be found among the Aryans more than any of the other Caucasoid stocks.

We have made this point as it leads directly on to the discovery of a series of motifs in the traditional accounts of Genesis which have their direct parallel in Aryan thought.

The Aryan conception of the earth was that it was like a saucer turned upside down, and surrounding it was the sea. Over it went streams or rivers of waters, arising from the seas surrounding the earth, which passed under it, to rise from the seas on the other side. The streams of waters which thus passed overhead—and from which, presumably the rain was believed to fall, was separated from the earth and its waters by something more solid than just air which held the whole in their proper places, and enabled the streams of waters to flow through the air. To us this may seem a very curious idea, but it was, after all a rational enough way for ancient man, seeking to explain natural phenomena with his limited knowledge of the earth and the universe. It is therefore of interest to find that this ancient Aryan idea appears also in this first chapter of Genesis for we read—

> And God made the firmament and divided the waters which were under the firmament from the waters which were above the firmament; and it was so.

The heavens we see are this firmament, below them is the earth and sea, and above the land of moistures and waters.

Furthermore, it is surely significant that the first Manu of the Aryans, as portrayed in the Hindu scriptures is Swayambhuva who is also *Adima*, which is the name for the first named man of the Bible, *Adam*.

Now there is a double account of creation in Genesis. That of the first chapter talks of *Let Us make Man*; and then in the second chapter we get what has usually been taken to be a repetition, perhaps because it is a parallel account which has been run into the first by some editing at some time before or about the 6th century B.C. This second talks solely of the creation of Adam and Eve, the garden of Eden, the fruit of the tree, the fall of man, and the introduction of original sin.

Whether this is careless editing or not, we believe that both accounts carry different stories or facets of the human creation as it was understood by rational and very level headed ancient thinkers—for it should be remembered that on the whole the Genesis account is sufficiently sensible that it could be accepted by scholars, philosophers and naturalists, in its literality, till a century ago.

The account of the creation in the first chapter is certainly concerned with that of all living things, including all types of men, and the second comes down to particularise in the history of one family or strain in that creation, and, in fact, the Bible account is not saying that all mankind are coming from one pair, as has been generally assumed. For it seems clear that the creative activity is envisaged as something much wider than that, and we have no doubt that these two stories of human creation are side by side in the 1st and 2nd Books of Genesis because their original compilers saw that the creative act went beyond that of one strain of men only. Now if we are justified in this deduction, it is interesting, since it is only in the last few years, since genetics has come to be understood, that it has been realised that creation by evolution has been the creation of *stocks* and not of *individuals*.

Therefore, as we read these accounts there is a general creation, and within that is a particular strain, in which the ancient writer is especially interested as it contains his own racial ancestry, and that is figured by the Adamic family, with its patriarch in Adam, and matriarch in Eve, who is born on the same flesh and blood as Adam.

In this Biblical account we get the tree of knowledge: the fruit, the eating of it being forbidden, the fall, following on the eating of the forbidden fruit, and the banishment from Eden. Now this is absolutely parallelled in Aryan mythology. For God (seen as Siva) dropped the blossom of the sacred fig tree, and the Adima is persuaded by his wife Satarupa to possess it, and is degraded in punishment for it. This is the same story as

Eve's persuasion of Adam to eat the fruit, and their banishment for doing so. In addition, there comes in the tree, as a symbol, and the serpent, which are very typical Aryan motifs traceable from the Hindu scriptures to the mythology of the ancient Vikings.

It will be observed that the homeland of the Adamic stock is conceived of as a garden. It should be noted that when we come to discuss the flood in connection with the Iranian traditions, a garden becomes the place of refuge, and we suggest that since the ark or ship or boat is the principal refuge throughout the Aryan world it is probable that in the case of the Iranian there has been a transposition of ark and garden. The garden, however, should refer to the delightful land where the race first arose. It was a land of animals and of fruit trees and crops, and Adam and Eve were unclothed in it. Therefore, it was a land which had a mild to warm climate.

We know that primitive man can transmit knowledge over countless generations with considerable accuracy, by repetition and memorising the sacred stories of the race. There is little doubt that the true elements in these old stories must have been transmitted in much the same way, and therefore they are not to be dismissed as worthless. The moral principles drawn from the stories are no doubt of later origin, when the books were edited by theologians to draw out the purpose of God with Man. But the kernels of the stories are the traditions of a race. We believe that the essential points we have dealt with are extremely old, but are the result of such transmission, except where the acts of the creation themselves are concerned, which we have put into the same category as prophetical utterances and rely on more psychic means of transmission. Consequently, when we reach back into stories such as we find in the Avesta, the Vedas, and the Bible, we are dealing with history, transmitted orally as tales, in which the historical facts become over-laid my many layers of tale-making, moralisings and theological interpretations, and the remoter the events, the greater the coverings of this sort which exist, and the fewer facts which will be left for us to redeem from the narratives. Here in the Bible account it is clear we are dealing with facts of such a range of remoteness that they belong to periods right at the dawn of the Caucasoid races, perhaps even before the Aryans split off from the Semites, and Agglutinative speakers (such as the Finnu-Ogrians and Dravidians) of the general stock.

If the story we have been following belonged to the hot lands then there would be no significance in the nakedness. But, having shown the connection between the Hindu Aryan traditions and those of the Bible, it is clear that they could not have originated in the tropics. For, we must remember the strong Arctic tradition in the Vedas; where it is clear that the earliest Aryans lived somewhere to the north in Central Asia. Therefore, it will be seen that since the Genesis account must link up with those of the Vedas, Avesta, and the rest, a northern location is involved, and to have a warm climate there involves on inter-glacial period, perhaps the last, or a warm oscillation after the retreat of the Ice. We think that subsequent accounts in the narrative suggest the former. If that is so, then we are dealing with something very old, for the last Ice Age maximum went into retreat about 10,000 B.C. and it probably advanced as early as 20,000 B.C. (The writer does not accept the high antiquities which earlier archaeologists have tended to give to all these events.) If this is so we have here a narrative referring to events of about 20,0000 years ago, and naturally, even with the normally perfect oral tradition of *highly intelligent* primitive peoples such as the proto-Caucasoids, branch of whom were becoming or soon to become proto-Aryans, the facts that will remain must be few and remote.

In this situation the temptation of Adam by Eve, the eating of the fruit, occurred. Then we learn—

> And the eyes of them both were open, and they knew that they were naked; and they sewed fig leaves together, and made themselves aprons.

Now it is a fact that no primitive men anywhere consider nakedness (where nakedness *is climatically possible*) indecent. Therefore, unless this is an actual interpolation, the clothing of themselves could not have been for that reason, but was climatic. To this point we will return shortly.

One of the consequences of eating the fruit of the tree of knowledge was that they had knowledge. Now knowledge, the supreme knowledge, in the most primitive state was the fact of generation, that is the function of the male.

From this then we may conclude that the bearers of the traditions of the race entertained the opinion that the knowledge of paternity in the production of life had already been acquired in the garden, as a result of partaking of the tree of knowledge, and an earlier, more simple, less sophisticated state of innocence had been left behind. That was the former Golden Age. Now the interest which arises from this is that all the Caucasoid stocks, whether Aryans, Semites, or the peoples of the Mediterranean Basin, all had a knowledge of the function

Astrological Appraisement of Behaviour-Patterns

BY SRIMATHI M. A. RUKMINI, B.A., B.L.

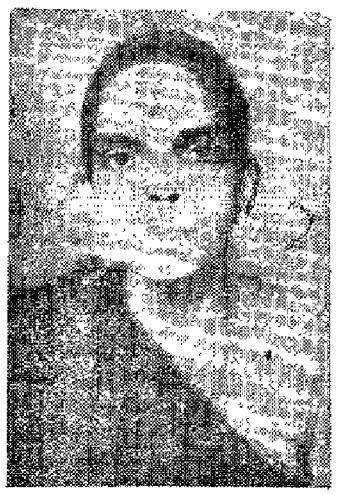
General Consideration

IN this article I propose to explain and evaluate certain typical behaviour-patterns, in the light of indications thrown by astrology, which, notwithstanding, onslaughts and assaults on it, seems to be growing strong with the advance of time.

The 20th century has been described by some as a century of *psychology*, though such a description can well be doubted or challenged. As the century is moving towards its end, marvellous and yet more marvellous discoveries are being made, and the century can as well be christened as the century of *Sputniks*, or *summit-talks*, or of anything equally handy or striking. Assuming for the sake of argument, the correctness or legitimacy of the description of the current century as century of *psychology*, this fascinating science has been understood as a science of *behaviour*.

Life is a sum-total or cumulation of different forms, types, and patterns of behaviour. Modern scientific psychology, does not officially admit the existence of a *soul*. Nor does it admit the existence of *mind*. *Consciousness* also seems to have been at a discount. Only *behaviour* is admitted. All activity ranging between assimilation of food, and highest forms of literary, religious, scientific, political and other varieties, is brought under the most comprehensive or all inclusive term *behaviour*.

Such a behaviour (of course, only human behaviour is taken into account in this discussion) is said to be the subject-matter of psychology. Such behaviour is individual, social, communal, national, international and so forth. Or, further simplifying, behaviour may be divided or classified into two types or patterns mainly. One is *individual* behaviour. The other is *group* behaviour. There are certain exceptional individuals that live totally cut off from all contacts and relations with others. Similarly, anthropologists have listed certain strange groups of persons which live in utter seclusion and isolation cut off from all traces of contemporary civilization.



SRIMATHI M. A. RUKMINI

For purposes of this discussion, I shall not be making any reference to these two extremes. The discussion will be restricted or limited to a study of normal rational human behaviour. There is another important factor to note. Behaviour develops amidst certain surroundings, animate and inanimate collectively as *environment*. If growth or development be contemplated through the different stages, commencing from birth and terminating in death, it would transpire that life is a series of adjustments to surroundings or environment. Taking an extreme view even birth should be deemed an adjustment. Death is another. It is so to speak, final adjustment, after which there is neither need, nor situation, nor adjustment. A general law has been formulated. Successful life means successful and efficient adjustment to environment. Failure in life means maladjustment, or inefficient adjustment.

(1)

In the light of these general considerations, let me explain what are typical behaviour-patterns. In the first place, behaviour, behaviourism, is determined by the energy and effort, physical and intellectual endowment of given individuals. These individuals are mostly obstinate and self-willed. They are independent. They act on their own initiative. They make or mar their own Destiny. Often times, on this or that occasion, these individuals may pretend to consult or take counsel from others, but, in reality, they will act only according to their own will and pleasure. They would ignore or disregard the opinion and advice of others. This is one type or pattern of behaviour. Secondly, others would be by nature incapable of taking independent decisions. Their conduct would be largely determined and regulated by the advice and guidance given by members of the family. Sometimes, the male members of the family may be playing a dominant role. At other times, the female members may prove to be domineering and exercising authority. This is one type or pattern of behaviour. Thirdly, yet others would have hardly

anything to do with members of the family. They would exhibit striking and remarkable dependence on the advice and guidance given by their friends. Such persons would have no secrets from their friends. They would share with their friends even the most private official and social, and individual secrets. They would take a pride in proclaiming that they would rather bow to their friends than to their relations and family members. Fourthly, some others, again, would model their behaviour in the light of the opinion and good estimate of the society or community to which they belong. They will care only for social or communal opinion. They would not like to lose their caste, or prestige, in the scale of social evaluation. Fifthly, there are some who regulate and control their behaviour, in the office and even outside, according to the opinion of their official superiors.

Such are often servile and obsequious individuals who are figuratively and spectacularly, described as ready to sell their souls for a mess of pottage. It is possible to imagine any number of degrees of servility and sycophanticism.

While the intermediate degrees may be imperceptible, the extremes are bound to be sufficiently compelling attention. I have attempted a rough classification of some of the typical patterns of behaviour. But, there is no finality about this. Others may attempt a different division or classification, according to the principle of division or classification attempted. Modern psychology as it stands, will give room for other variant patterns of behaviour.

(2)

A statement or *obiter dictum* is attributed to Buddha, to the effect that one should never seek to condemn or punish others, because, it is not given to mankind as imperfect, constitutionally, to understand all the details and intricacies of the mechanism of *causation*. To, us, practising advocates, this must seem strange, because, very often advocates are called upon to argue in favour of conviction or acquittal, on the basis of evidence tendered.

Though Buddha's exalted ideal should be absolutely difficult and even impossible to follow, in practical, concrete, daily life, it is bound to reveal a profoundly important *truth*. It is the inevitable and incorrigible human tendency or predilection that **when a person is successful, he is jubilant and attributes all success to his own personal effort and endeavour. If, however, he were to fail, he is only too ready and willing to blame others for his failures.** He would go about saying that the entire business had been spoiled by X, Y or Z, and that others are responsible for his failure and that the blame should be laid at their doors.

The statement attributed to Buddha contains a very pertinent and relevant attack on and protest against the human tendency to attribute failures to others, and claim for themselves all credit for success obtained. It becomes necessary to investigate whether astrological truths and theories can throw any light on the behaviour-patterns listed and on the readiness of human beings to blame others for their failures.

The ancient Maharshis and authors of ancient Indian works and treatises on astrology have very rightly based all their theories and conclusions on the unerring and universally applicable doctrine of *Karma*. Each should bear his or her own cross. Each would be sowing only in accordance with Karma and reaping the consequences, again, only, according to the law or principle of Karma. So, the tendency to self-adulation and self-glorification at sight of success and the equally pronounced and inveterate tendency to condemnation or denunciation of others, at sight of failure should both be effectively and sternly curbed and controlled, if balanced judgment and smooth action are to be secured for effective adjustment to environment, which, is successful behaviour.

(3)

It appears to me that in the matter of determination of the different behaviour-patterns of individuals and groups, both the movable zodiac and the different directional systems and aspectarian are not quite adequate or successful. I am not entering into or inviting any discussion, in this context, and I am merely stating my personal view.

The fixed Hindu zodiac, however, tells a different story altogether. The signs of the zodiac have their own rulers or lords. Each planet is also connected with specific objects and values of life and existence. Each planet is taken as being exclusively determinant of certain objects and values. (*Karaka*). Most, if not all, of your readers will be familiar with the schemes of rulership of the signs of the zodiac and determinantship connected with planets. (*Adhipatya* and *Karakatva*).

I am inclined to think that there is some inherent plan in the zodiacal rulership scheme, and the determinantship scheme of planets. The latter may be left alone now, as it requires a separate and independent treatment.

The starting point is very rightly furnished by the Lagna or the ascendant. The ascendant marks or represents the *self*, the *individual*, the active *agent*, who sows

and reaps according to the imperishable and universal Law of Karma. The lot of the individual is, willy-nilly thrown in the midst of a family and, till the individual reaches a particular period or age, it is only the family environment that moulds the behaviour of individuals. So, after the ascendant, the 2nd house is connected with the *family*. (Used and understood in a very general and comprehensive significance or connotation.)

Coming down to specifications, brothers and sisters, would naturally rank nearest to individuals, and that is why, the 3rd house is connected with these blood-relations.

There are other relations besides. Some of them are reckoned to be near, and others are taken as distant relations. In Law, there are several degrees of nearness and distance in determination of relationship in respect of a given family-unit. So, the 4th house, is taken as connected with relations in general, be they near or distant, and these are all included under the term–*Bandhu*. Then comes the 5th house, marking issues or progeny considered to be highly important from the stand-point of religion. A male issue, there must be. If not, the debt due to dead ancestors, pitrus (manes) is never discharged or liquidated. A female issue is only of lesser importance. In recent times, the Hindu Law has been suitably amended or re-enacted giving equal prominence or importance to sons and daughters, whatever the demands of spiritual and religious exigencies, and constitutions. The behaviour of a given individual is vastly influenced either for good or for evil by sons and daughters.

The 6th house is taken to be connected with enemies, ill-disposed persons, and others, who, for some reason, or another, are bent on causing some harm or injury to a given individual. The opposition may range between simple verbal abuse and violent antagonism. Such opposition may lead to social boycotts, obloquy, and other forms of annoyance.

The 7th house is connected with partner in life, wife or husband. It must be universally obvious what a tremendous influence life-partners exercise on one another. The nature and range of the influence depend on the social construction and pattern of civilized groups to which the parties belong. While there are several instances of happy and harmonious life led by the partners in life, man and wife, there are others of striking disharmony, and maladjustment ending in divorce courts, and other forms of frustration. The records of criminal courts, in all modern civilized countries of the world contain thrilling stories of husbands, poisoning wives, and wives conspiring with paramours to do away with their husbands, and so forth.

All this would convince that this house accounts for and is responsible for behaviour-pattern. Behaviour is either fulfilled or frustrated. Even the world's luckiest and most famous individuals are subjected to some form or other of frustrational behaviour. Outward or external glamour connected with high political and other stations in life is often responsible for creation of many delusions. Such persons happen to be victims of characteristic frustrational behaviour.

The 8th house is associated with such forms of frustrational and destructive patterns of behaviour. The behaviour-pattern may either be self-frustrational, or other frustrational. The 9th house is connected with both family, society, and even the world-at-large. How given behaviour-patterns affect family, society, and other larger interests, would be judged by reference to the indications thrown out by the 9th house. Honour, luck, prestige, etc., radiate from the individual and cover family, society, etc. Similarly, those radiating from the latter also affect the former.

It is the 10th house that ranks as the most vital and significant. It marks mid-heaven. It is connected with pursuit of profession. All should be putting forth some form of activity to earn livelihood. The law condemns persons who may not have any ostensible means of livelihood. Behaviour-patterns grow, indeed, very complex and complicated, in respect of the house of profession. It is only in respect of the affairs of this house, that individuals are obliged to contact others, and other members of society, for the advancement of life-interests.

By means of a convenient convention, in regard to each horoscope, be the individual, a humble school-master in a village, or the world's greatest dictator like Hitler, the 9th and 10th houses are described as *Bhagya* and *Rajya* — prosperity and empire.

What would be the result if a village school-master's financial prosperity and empire are juxtaposed and critically evaluated side by side with those of Hitler and Stalin? Nevertheless, convention sticks on to age-long usage and refers to *Bhagya* and *Rajya* in each chart.

The 11th house is allied with gain, which means, the individual coming into contact with society and social-groups, dealings and transactions with whom are anticipated to bring on profits and gains. The gain may not be necessarily restricted only to finances and other material

resources. The gains may be social, intellectual, religious, moral and so forth, which must seem attractive and pleasing to individuals.

The 12th house stands correlated with occult phenomena, hidden, or secret enemies, wastage, disappointments, and like values. In connection with the entities and units governed by this house, the individual has to come into relation with others, in a rather peculiar manner not found elsewhere. This house is also believed to be connected with the fate or destiny of individuals after death.

Just as there is the common saying that in times of apparent peace, one goes on making preparations for wars, mankind during the progress of life, is making knowingly or unknowingly only preparations for final death.

Some are irreligious, and atheistic. They defy death. They are not afraid of death. Others are religious, God-fearing, and they are afraid of death. They defy death in quite a different sense. They regard it as in a way fulfilment of the life lived and as a gate-way to another, may be, better or worse. It would be necessary carefully to distinguish from one another, physical or biological fear from the moral or spiritual fear. Occult values, tendencies, and forces are correlated with the 12th house.

From the fore-mentioned facts, it would be clear that practically all the behaviour-patterns have been covered by the 12 signs of the zodiac, which, take on the appellation of houses in respect of individual charts.

(4)

I shall suggest the following tentative arrangement for the distribution of the different behaviour-patterns over the zodiacal signs.

Commencing from the Lagna or the ascendant, the first four houses may be conveniently correlated with the individual and with near members of family, and the behaviour-patterns directed towards them.

The fifth seems to be a host in itself, in view of the importance of perpetuation of species or clan, particularly, for religious and spiritual purposes. A son may continue and improve on the legacy left by his father. Or, he may destroy it, and begin anew or afresh, or may even terminate all linkage with the parent and family traditions.

The 6th, 7th and 8th houses would account for the behaviour-patterns with others concerning, with others belonging to other families, and groups of society.

The seventh particularly, is as significant as the fifth. This will determine behaviour-pattern with a member chosen and selected from a different family, and incorporated into one's own, for secular and religious purposes.

The 9th, 10th, 11th and 12th are associated with members removed farther from the family circle, and to society at large, and the behaviour-patterns connected with them. In this connection, it should be noted that traditionally, the 9th house is connected with *father.*

As observed before, there are three basic or fundamental behaviour-patterns. One is confined to immediate family circle. The second extends in scope and covers others less intimate. The third relates to wide, and comprehensive social range, which in certain exceptional cases may be co-extensive with humanity itself.

The arrangement suggested by me is only a very rough and schematic one, and in the light of facts and data gathered in the course of research, the arrangement may be suitably altered or reconstructed.

(5)

I shall now refer to an interpretation of the significance of the houses and of the behaviour-patterns concerned, that lies embodied in a work which dees not seem to me to have received sufficient attention.

I refer to the work written in short compass named *Keraleeya Jatakasara* which was published in Bombay about 50 years ago. As the very name suggests, it seems to be something like an electic work parts of which seem to have been taken from other treatises. Parts seem to be independent composition. I find there is a striking, definite, authoritativeness about the points mentioned in this work.

Of the twelve houses, it is observed in this work that as many as seven are to be judged unfavourable or inauspicious. (*Bhava sapta dukkhadayee iti kathyate*). According to this reckoning, 11th, 3rd, 8th, 6th, 2nd, 7th and 12th are taken to be unfavourable. Whoever he was, the author does not mince matters. He categorically states that any bhava which may be united with the rulers of these seven inauspicious ones, will be destroyed. (...*Nasam prapnuyat dhruvam*...) Of course, the meaning is that the good effects of the said bhava would be destroyed.

It is further observed that the four kendras, and the two konas are quite favourable. The auspicious houses, then, would be six. But, this would seem to be in contradiction with the categorical statement that seven are inauspicious. If seven are evil, the good ones would be five. But, the good ones are enumerated to be six (*i.e.*, 4 quadrants and 2 trines). There will be no difficulty in removing the apparent contradiction and bringing

(Continued on page 153)

Moon and Menstrual Disorders

BY DR. JAGANNATH RAO, M.B.B.S., M.R.A.S.

MENSTRUATION is a normal physiological phenomenon of female sex. And normally a woman continues to menstruate upto the age of 45 when climacteric occurs. As such a woman undergoes lot of emotional disturbances at two times in her life, *i.e.*, at puberty and at climacteric. The age of puberty greatly varies in different countries and races, but the climacteric occurs nearly at the same age everywhere. I propose to deal in this article with the various disturbances that occur with regard to menstruation.

It is an established fact of astrology that the Moon governs the uterus, ovaries and its ligaments, cervix-uterii, glands of Bartholi and external genitalia. And as we all know the Moon governs mind and emotions also, and as such any affliction to the Moon in the natal chart will give rise to various disturbances. It is the object of this article to bring all the findings to the notice of the readers of THE ASTROLOGICAL MAGAZINE which is devoted to research in all branches of astrology.

Mars governs blood and breakage of tissues and uterine endometrium. As such a favourable position of Mars with reference to radical Moon is also necessary. Before I actually illustrate this subject with the living horoscopes, I would like to add a few words regarding menstruation itself so that the lay readers may know as to how menstruation occurs.

If the readers have read my article " Moon and Maternity ", they will know that the menstrual cycle of a healthy woman closely follows the lunar cycle consisting of 28 days. When the ova which have been discharged from the ovaries fail to get fertilized by the male germ, the uterus which had by now prepared itself for the reception of fertilized ovum begins to shed the extra layers of endometrium. This soft bed of extra endometrial layer was necessary for the implantation of ovum. The breakage of the uterine endometrium causes blood-flow, and this phenomenon is called menstruation. This process lasts in a healthy woman for four or five days. And the uterus once again prepares itself for the future ovum. And thus goes on this cycle until a fully fertilized ovum is implanted in the uterus, when the conception occurs. Here we must understand how far the jurisdiction of Mars, Moon and Sun extends in this phenomenon. Mars is mainly responsible for the 'starting' of the flow by causing breakage of uterine tissue. But the actual flow and its duration is controlled by the Moon. The Sun comes in the picture when the fertilization occurs but he too can cause blood-flow if certain combinations are present. Here the point which I want to stress is that the Moon is an all-important factor in the normal blood menstrual flow. Any affliction as we will study now, will cause disturbances in the monthly flow, and consequently a woman's capability to conceive is reduced.

It is an unfailing observation that menstruation starts when Mars aspects powerfully the Janma Lagna or Chandra Lagna by his *gochara* movement. I have however found that mere aspect of Mars to the radical Moon is enough for the excitation of flow, while his aspect on the Janma Lagna may be necessary for the first menses. The fact that the planets cast the shadow of their effects even before they actually enter a sign can be easily verified from the monthly flow of a woman. The readers are aware that the Moon stays two and a quarter days in each Rasi. So, the flow starts just a few hours before the Moon actually receives the aspect of Mars and remains for a few hours after the Moon passes out of the aspect. Thus, you can see that the actual period of normal menses will be 24 to 48 hours more than the period of stay of the Moon in a Rasi. Thus, the flow continues for just three and a quarter days or four and a quarter days in a normal healthy subject. Should there be any affliction to the Moon in the natal chart this period will be disturbed in the concerned Dasa or Anthara Dasa. There is another point worth considering and that is, whenever the Moon is afflicted in the chart of a woman her emotional life will also be disturbed. That is because the Moon governs the emotions also. I have already discussed this point in detail in my article *Moon and Maternity* published in December 1957 issue of THE ASTROLOGICAL MAGAZINE. Both maternal labour and menstrual flow are controlled by the Moon, as such you will see most of the women under labour pains or menstruating near the full Moon or new Moon, as at that time the emotional graph of a woman shows its highest curve. It is quite understandable as to why the uneducated women-folk remember their 'periods' as near this full Moon or that new Moon. No woman for that matter notes

down the date of her last 'period'. She simply remembers it whether it was near a full Moon or new Moon!

I will now illustrate my findings with the charts of living persons. I have collected a number of charts from various gynaecological wards as well as from my own practice.

Case No. 1 (Birth Details):— Born on 31–8–1936 at 7-36 a.m. (I.S.T.). Lat. 10° 47′ N., Long. 79° 8′ E. Balance of Mars Dasa–6 years, 1 month and 15 days.

A Case No. 1 is one of the cases referred to me for astro-diagnosis. Mark the position of the Moon who is hemmed in between two top malefics. In this, the Moon is not directly afflicted but is placed between two malefics. This is a very important factor in astro-diagnosis. I have seen in all such cases the trouble lies with the tubes, thereby causing pain and great discomfort. The parents of this lady spent thousands of rupees for mere diagnosis, but were not satisfied. My diagnosis on the combinations present was clear. I labelled it as Salpingitis. Without going into details of the case history, I will point out a few salient points. This lady though married a number of years ago now is suffering constantly and has not conceived so far. Mark the Lagna. Incidentally the Moon has suffered in the 5th house. And it is quite natural that she has not yet conceived. The trouble started in the current Rahu Dasa which is one of the afflicting planets in the chart. There are many causes for menstrual troubles and the disease of tubes is one of them. Any one looking at this chart will be inclined to think that Rahu Dasa will be good. But in Medical astrology all such afflictions will have to be carefully weighed before venturing any prediction. In this case, Rahu Dasa has proved very disappointing, even though he is placed in a quadrant.

Case No. 2 (Birth Details):— Born on 26–1–1930 at 4-25 p.m. (I.S.T.). Lat. 17° 22′ N., Long. 78° 27′ E. Balance of Kethu Dasa—3 years and 6 months.

In regard to Case No. 2, the native of the chart is married since eight years. She had so far two abortions. Her monthly periods were never normal. She had alternate excessive periods since the last ten years. With the entry of Saturn's sub-period in Venus major period, she became very moody and even melancholic. (Note the combination for melancholy) and her monthly periods also suffered simultaneously. It is very interesting to note that whenever the Moon is afflicted by Saturn or Rahu in a woman's chart, besides becoming melancholic, she suffers in her monthly periods. The menstrual cycle will also become affected. Now since the entry of Sun's Dasa she is suffering from 'excessive flow'. It hardly stops for a few days and again starts flowing. Please note the affliction of the Moon in the 7th house coupled with the affliction of the lord of 5th house in the 8th house. In a woman's chart the position of the Sun in 8th is always indicative of excessive discharges, at some or other times depending upon the Dasas and Bhukthis. Very naturally here the native has been suffering from excessive periods which is termed 'menorrhagia' from the beginning of the Sun's Dasa. Coupled with this she has become very restless and suffers from mental depressions. (Note Rahu is also aspecting Moon). This was no doubt a complicated case for the doctors to diagnose. They are of the opinion that some malignant changes are occurring in the uterine wall and this was told to her relatives. The relatives of this case finally consulted me for astro-diagnosis. Saturn in the 7th house with afflicted Moon, no doubt indicates a tumor. But the age and other factors do not indicate malignant change. It was therefore diagnosed as simple tumor as a result of incomplete miscarriage, which has since been confirmed. She must however undergo an operation for which there is definite indication in the chart. The office-bearer for blood and breakage, Mars is closely associated with Moon in the 7th house, and for Mithuna Lagna he is definitely a malefic.

Case No. 3 (Birth Details):— Born on 11–1–1918 at 2-30 p.m. (I.S.T.). Lat. 15° 10′ N., Long. 76° 56′ E. Balance of Kethu Dasa—3 years, 1 month and 24 days.

This is another case of 'menorrhagia'. In this case you will see that there are indications for malignant disease. Note the Moon's affliction in 8th house. Mercury also has suffered. Note Mars is aspecting the 8th house. This is the chart of an unfortunate childless widow. She had a number of abortions during her married life. Note the position of Saturn and Mars which is definitely bad for issues. Now since the entry of Rahu's Dasa, she has been suffering

No. 1.—*Rasi Chart*:—Gemini-Kethu 7°; Cancer-Mars 20° 12′; Leo-Sun 14° 15′; Virgo-Venus 21° 10′; Mercury 10° 40′ and Lagna; Scorpio-Jupiter 22° 10′; Sagittarius-Rahu 7°; Capricorn-Moon 25° 0′; and Aquarius-Saturn 27° 6′.

No. 2.—*Rasi Chart*:-Aries-Rahu 15°; Taurus-Jupiter 13° 30; Gemini-Lagna 23° 7′; Libra-Kethu 15°; Sagittarius-Moon 6° 40′; Mars 28° 26′ and Saturn 13°45′; Capricorn-Sun 12°56′; Mercury 3° 2′; and Venus 10° 15′.

No. 3.—*Rasi Chart*:—Taurus, Lagna, Jupiter 9° 0; Cancer-Saturn 19° 48′; Virgo-Mars 6° 35′; Sagittarius-Mercury 8° 47′; Moon 7° 20′; Rahu 8° 3′; Sun 27° 48′; and Aquarius-Venus 2° 55′.

from excessive period and that she is showing mental aberration also. Note Mercury also has suffered. Due to the fact that Jupiter is aspecting the 7th house she was somehow spared from mental affliction and menstrual troubles until Rahu's Dasa. The lord of blood and breakage Mars is aspecting the 8th house which has evil conjunctions. The fact that she had many abortions is another indication for malignant disease of uterus. The case has been diagnosed as 'Cancer Uterus' and she has been advised total hysterotomy. This is rather unfortunate as she has already become a mental case. *Here is an occasion for me to stress the point that for insanity Mercury must also suffer along with Moon's affliction.* I am grateful to my readers for their various comments which are appearing in this magazine on my article *Moon and Mental Melodies.* And I once again endorse the view of Sri B. V. Raman with regard to mental affliction.

Case No. 4 (Birth Details) :— Born on 3–3–1929 at 2-30 p.m. (I.S.T.). Lat. 17° 22′ N., Long. 78° 27′ E. Balance of Mercury Dasa—15 years, 3 months and 18 days.

Case No. 4 is of dysmenorrhoea, which means painful menstruation. Here note the Moon's affliction by Kethu. Saturn is in the 2nd from Chandra Lagna. And in the navamsa the Moon is placed between Mars and Rahu and occupies the 6th house. Where there is a simple affliction like this ordinary menstrual troubles are manifested. Kethu's association with the Moon is not desirable for easy parturition also. As such the lady had two difficult labours when the child had to be extracted by forceps. She had abortions and miscarriages also.

Case No. 5 (Birth Details) :— Born on 25–7–1921 at 12-30 a.m. (I.S.T.). Lat. 19° 30′ N., Long. 80° 36′ E. Balance of Jupiter Dasa—2 years, 9 months and 18 days.

This native of Case No. 5 is suffering from oligomenorrhoea, meaning scanty menstruation. Please note here also the Moon is afflicted by Kethu. Mars the ruler of blood and breakage is neecha in Cancer. As such his strength to cause menstruation regularly is reduced. The combination of lord of 12th with the lord of the 11th is definitely bad for good health. Since Mercury is malefic for this Lagna her suffering has started from Mercury Dasa's entry in her life. Mercury owns 3rd and 6th house, and the shadowy planet Rahu is placed in 6th. And Mars lord of Lagna and planet responsible for regularity of menstruation is debilitated. When menses are scanty, it goes without saying that it will be painful also. Such persons suffer from back aches, leg aches and body aches in general. Apart from this, this lady suffers from frequent headaches, Lagna being Mesha.

I will now discuss 'amenorrhoea' which means cessation of normal menstruation. It is important to know the various causes of cessation. Apart from pregnancy, various disorders of hormonal glands and other systemic diseases like anaemia and tuberculosis, etc. also cause cessation of menses. The main organic diseases for amenorrhoea are said to be ovarian disfunction, adreno-cortical tumor, pituitary adenomata and Cushing's syndrome, etc. Apart from this, Dr. W. R. Winterton, the famous gynecologist of London, gives the causes of amenorrhoea as "change of residence, sudden shocks, worry and mental disorders will sometimes cause amenorrhoea, and desire or fear of pregnancy may also be responsible for amenorrhoea." I remember a case. A young lady of Warrangal district was told one evening all of a sudden that her husband was murdered while at work in his field. She was simply dumb-founded. She did not menstruate even though she was due. And she has never menstruated since then! In the same manner fear of pregnancy in an inexperienced and highly strung girl is quite possible and I will produce before you one such case. Brutal sex-act also will have adverse effect on menstruation. And in all such cases of 'phobia' I have found Rahu to be the afflicting planet. He creates unfounded fears and 'phobias'. Even the mere aspect of him can do this. Kethu's affliction to the Moon or Lagna makes a woman more aggressive rather than timid. But Rahu in the rising sign definitely makes a woman very timid. Such persons are very prone to deception. Excessive flow of menstrual blood increases the sexual appetite, whereas amenorrhoea completely destroys it, save when it is due to conception. In this connection we must study the 3rd house and its lord as it is the house of courage. Besides the Lagna also plays a great part in making the person courageous or a coward. It is seen that Mesha, Mithuna, Kanya, Dhanus and Meena Lagnas make a person

No. 4.—*Rasi Chart* :—Aries-Jupiter 14°31′ and Venus 3° 45′; Taurus-Rahu 2° 14′; Gemini-Mars 4° 32′; Cancer Lagna; Scorpio-Moon 18° 0′ and Kethu 2° 14′; Sagittarius-Saturn 6° 32′; Capricorn-Mercury 22° 23′; and Aquarius-Sun 19° 34′.

No. 5.—*Rasi Chart.*—Aries-Lagna 21°; Taurus-Venus 24° 3′; Gemini-Mercury 19° 42′; Cancer-Sun 9° 15′ and Mars 1° 10′; Leo-Saturn 28° 31′ and Jupiter 24° 18′; Virgo-Rahu 28° 50′; Pisces-Kethu 28°50′ and Moon 1°.

timid in general. Such people worry much for small things in life and fear this or that thing. I will illustrate this fact from the following horoscope of a young married lady.

Case No. 6 (Birth Details):— Born on 1-7-1940 at 12-30 p.m. (I.S.T.). Lat. 17° 22′ N., Long. 78° 27′ E. Balance of Venus Dasa—1 year and 7 months.

The native of Case No. 6, a young lady, was menstruating normally until her marriage. But after the first night with her husband she was terror-stricken, became pale and began to lose weight. The parents and the husband were greatly worried over this. The girl would not tell them the reason of her apathy. They consulted a local hakeem, who told them that the girl was 'carrying'. And this made the girl all the more frantic, and she made up her mind to separate herself from the husband and she told her decision to her parents, who thought that she had become a mental case. So finally they came to me. I examined the girl thoroughly and asked the parents to supply the birth chart and particulars, which was readily furnished to me. The next day I went myself to the house of the patient and took her into confidence. She then revealed to me that one of her best girl-friends had died during 'parturition' on the very date of her nuptials. And the news greatly agitated her mind and she was afraid of the same fate. When I told her that she had not conceived, she seemed gladly relaxed. I then infused some strength in her by explaining things, and thus a complicated case of amenorrhoea was solved. From the next due date she began to have her 'period'. Please note the Lagna which is afflicted by Rahu who, as I have mentioned already, is reponsible for creating various 'phobias' and besides note the lord of the 3rd house who has suffered 'neecha' effect and his strength is greatly reduced on that account. Incidentally the lord of 3rd house is Mars who also governs blood and breakage as well as courage. And Moon the karaka for mind and menstruation is associated with Saturn. The girl is hypersensitive, fearful and nervous type. In short this is a very interesting and typical case of amenorrhoea due to fear of pregnancy.

There are various other menstrual disorders which cannot be dealt with in a short article like this. Prof. B. S. Rao is perfectly right when he remarks that the whole life of a woman depends upon the 'first menses'—, for the Muhurtha of menses also plays a great part in the emotional life of a woman. He has dealt with this subject in detail in his book *Stri Jataka*. No wonder that the Sanskrit texts contain a lot of literature on this subject.

As a rule whenever a female horoscope is presented for examination we should examine the position of the Moon, Mars, Rahu and Kethu, besides other relevant factors to Medical astrology. Leaving apart the normal sex-life, a woman's life depends mainly upon the position of Moon, who controls emotions, menstrual cycle, and maternity. You cannot think of a healthy woman without normal menstrual cycle and maternity. Any number of yogas present in the chart cannot sustain them against diseases. Medical astrology will therefore be of immense help to the astrologers to keep the clients 'prewarned' against possible diseases. Thanks to Sri B. V. Raman who has undertaken to translate in English the great Sanskrit classic *Prasna Marga*, which deals exhaustively with diseases.

No. 6.—*Rasi Chart*:—Aries-Saturn 19°, Jupiter 16° 15′ and Moon 25° 35′; Gemini-Sun 14° 50 and Venus 9°; Cancer-Mars 9° 30′ and Mercury 8° 48′; Virgo-Saturn 19°, Lagna 19° and Rahu 24° 27′; and Pisces Kethu 24° 27′.

GRAHA AND BHAVA BALAS (SIXTH EDITION)

A Unique Treatise for measuring the Strengths of Planets and Houses numerically

By B. V. RAMAN

An entirely new book on Mathematical Astrology. The first real effort to present the complicated methods of assigning planetary and house strengths in a popular and easy style. Suitable for even laymen, it is just what enquirers have long been seeking containing as it does everything necessary for a quick and accurate study of astrological mathematics so very essential for correct predictions. Experts and students will welcome this new publication.

Significance of Lunar New Year Chart in Mundane Astrology

BY B. SURYA PRAKASH

FOR purposes of predicting important events in a native's life, his radix is generally consulted and predictions made accordingly on the basis of suitable directional systems. In India, we employ the never-failing Vimshottari and Kala Chakra Dasas, along with *gochara* or transits. In the West, secondary directions followed by the symbolic directions of one degree equal to one year are frequently employed. Of course, the test of time has shown to us that the symbolic direction of one degree equal to one year is a very reliable system. Again for purposes of delineating the yearly results we have our *Varshaphal* as compared with the solar return of the West. In both the systems we calculate the time of the Sun's entry into the same position (correct upto the second) which he held in the radix, and this we consider as the yearly chart for the year under consideration.

Now so much about the directional systems and methods of delineations as far as the radix of a native is concerned. But in making mundane predictions we do not have the radix of each and every country. Of course during these days when Governments are as unstable as sand dunes, we cannot even hope to get the correct hour (let alone the correct minute) of the formation of new Governments. Hence on account of these difficulties more often than not, the chart of solar entry into different cardinal signs is employed. But with the correct value of Ayanamsa (precession of equinoxes) itself being in dispute, we cannot rely on these solar entry charts, however strong the arguments may be in support of a particular value of Ayanamsa, for the simple reason whereas it is possible to make certain mundane events coincide with certain types of planetary patterns, of a solar entry chart, the same chart has very often failed us miserably owing to its inability to explain other incidents with the same planetary pattern.

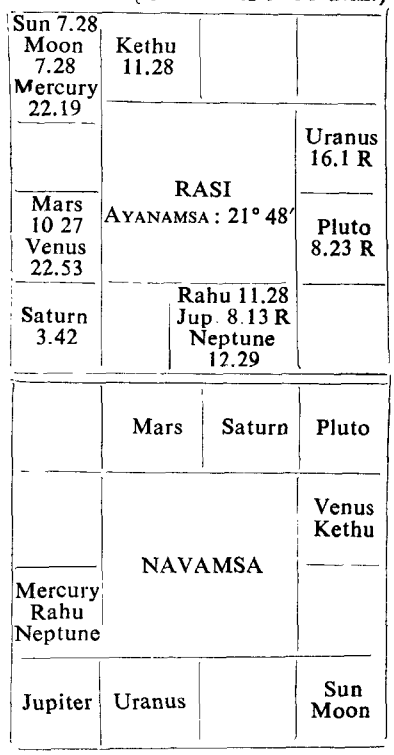
Mundane events based on solar entry charts into hypsomatic cardinal signs are being demonstrated by one of the contributors in THE ASTROLOGICAL MAGAZINE. While we appreciate his arguments, we are sorry to say that his solar entry charts do not account for all the mundane events.

If one has seen the Editorials in THE ASTROLOGICAL MAGAZINE, one will not fail to appreciate the validity and usefulness of the New Year chart employed by the Hindus. This can be cast without any trouble with reference to Ayanamsa, and this chart clearly indicates all the important mundane events of the year under consideration. The proof of the validity of the same can be had through such outstanding predictions, as the American intervention in Iraqi crises, Bulganin's downfall, Khruschev's rise, the fall of the Pakistan Government, etc., which had been clearly anticipated in the Editorial columns of THE ASTROLOGICAL MAGAZINE.

According to the Hindu system, the New Year is said to commence at the time of the New Moon prior to the entry of Sun into Nirayana Aries. A chart cast for this time will explain the important events that are going to occur during the year under consideration.

In this article, it is my desire to point out how this chart strikingly explains even the correct time (within a day or two) of an event, and how the same may be easily substituted for a capsolar chart or any other chart employed for making mundane predictions.

The following are the planetary positions at the commencement of the New Year (1958) which occurred at 3-21 p.m. (I.S.T.) on 20-3-1958 (G.M.T. is 9-51 a.m.)



A mere glance at this planetary set-up shows that Mars is by far the strongest planet as he is exalted, is in his own navamsa, is in association with Venus in Rasi and has the aspect of Jupiter in navamsa.

On account of this strong position of Mars, it is natural for us to expect in general much bloodshed, war-cries, explosions, rioting, etc., with which Mars has been associated. But his Rasi association with Venus (in a movable sign), and his having

the aspect of Jupiter from his own sign (in navamsa) temper his evil influences considerably, thereby minimising the possibility of war on a large scale. It is also significant to note that the exaltation of Mars has reference to 10th from Aries ruling Britain, (as lord of 1 and 8), 8th from Gemini ruling U.S.A., 6th from Leo (ruling France), and 12th from Aquarius (ruling U.S.S.R.) These dispositions of Mars suggest that the British Cabinet would be more war-minded and aggressive in its outlook, and much troubles would be in store for the Government. (Since the commencement of the New Year the British Government has faced many racial troubles). The 8th house situation of Mars from the ruling sign of U.S.A. indicates that the death-rate would be on the increase and that there would be many sex-crimes (Mars-Venus association in 8th). This position also indicates a national mourning (in U.S.A.) It is also interesting to note that Mars rules 6th and 11th from the ruling sign of U.S.A., indicating that America will be advancing more and more state loans, but these loans will not be of much use as far as U.S.A. is concerned on account of the 8th house situation of Mars. This position also indicates that the international prestige of America will be more on the waning side.

From the above discussion and the events I have given below, it would be evident that the occurrence of mundane events can be predicted with greater accuracy on the basis of New Year chart instead of capsolar chart.

Overthrow of Monarchy in Baghdad

The ascendant in New Year chart for Baghdad (erected for 12.28 p.m. L.M.T. on 20–3–1958) is 26° 28′ Gemini with 13° Pisces on M.C.

This chart shows some interesting features. The ascendant is considerably weakened by its lord's debility in the meridian. Mercury has not obtained Neechabhanga. In navamsa also he is considerably blemished by his association with Rahu and Neptune. Again the ruler of the meridian Jupiter, though in 5th from Lagna, is considerably blemished owing to his situation in the 8th from 10th, in an inimical sign with Rahu and Neptune. These afflictions to the ascendant, meridian and their lords clearly indicate that the ruling head of the country is in for some danger. It is also interesting to note that Neptune, the planet of illusion afflicts the meridian lord Jupiter along with Rahu, clearly indicating that neither the king nor the members of the ruling party ever suspected their being betrayed. Again the association of Sun, representing political power and the Moon representing common people, in the meridian in a better position than Mercury suggests the nature of the Government to be set up. Again Mars as lord of 6th representing enemies, opposition, wars, etc., in exaltation in 8th indicates that the ruling party had to face serious troubles (Mars in 8th) through military (Mars) resulting in a national mourning (Mars in 8th),

Now we shall progress the M.C. and the ascendant to the day on which the *coup* took place at the rate of 1 degree per day on 14—7—1958. The progressed M.C. is within 1 degree of the opposition of Mars in the New Year chart. The opposition of the natal Mars of the New Year chart to the progressed M.C. involves 2nd and 8th houses which indicates danger to the "aristocracies of the State".

Ahmedabad Police Firing

On 12th August 1958, "a blanket of 24 hours curfew since 9 tonight was clamped on a greater part of the city after day long clashes between pro-Maha Gujerat crowds and the police following the removal by the police early this morning of the Martyr's memorial raised by the Maha Gujerat Parishad on August 8th. The police opened fire three times in the afternoon, made lathi charges at 25 different places and burst over 100 tear gas squibs to disperse defiant crowds."

The New Year at Ahmedabad commenced on 20th March 1958 at 2-41 p.m. (L.M.T.) Scorpio 25° 8′ rising and Virgo 8° 51′ culminating. The co-ordinates of Ahmedabad are 72° 35′ East, 23° 2′ North.

The progressed ascendant of the New Year chart on the day of the incident came into exact conjunction with transitting retrograde Saturn in Scorpio.

Thus the ascendant progressed exactly (within 2 degrees) comes to a conjunction of retrograde Saturn (transitting), on the day of the police firing. Saturn represents common people and the sign Scorpio is credited with explosions, underground happenings, etc.

Banaras Boat Tragedy

On 13th August 1958, "13 pilgrims from Mysore were drowned when their ferry boat capsized after being caught in a swift current. Of these there were 9 women and children."

Looking into New Year chart of Banaras we find 0° 30′ of Leo rising with 28° 34′ of Aries on M.C. The ruler of the ascendant is placed in the 8th house in conjunction with the malefic Moon and Rasi association of Mercury ruling 12th house indicating losses. Added to this, the New

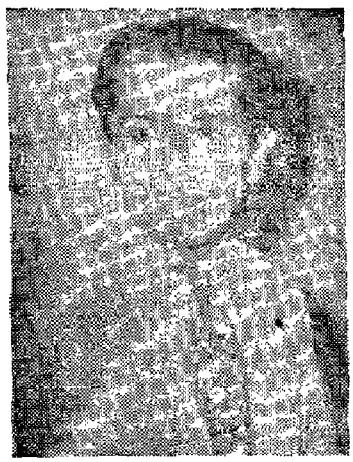
Some Aspects of Nadi Horoscopes

BY CYRUS D. F. ABAYAKOON

YOU may call astrology a science or an art. You can label it as a fraud, a superstition or even a pernicious doctrine as astronomer-royals do. But whatever you might say you are bound to examine the power of vision and astronomical accuracy behind the Indian Rishi forecasts which go under titles like *Sapta Rishi*, *Bhrigu Jataka* and *Agasthya*. These prophecies, like many others of ancient Sanskrit origin, have been recopied by *Grantha* writers of about the 10th century A.D.[1]

Opinion is divided on the reliability, utility and accuracy of these old palm-leaf horoscopes. A reader of THE ASTROLOGICAL MAGAZINE in Bombay City writes to me as follows:— "I bought Nadi readings (*Kousica*) from one pandit who is now in Ceylon. Even these readings have failed. Some years back I was interested in a girl whose Nadi reading mentioned that I would be her husband. Mine said that she would be my wife. But she has married someone else whose name was not mentioned in her leaf."

The *Kousica* leaves, he refers to, are recordings of horoscopical discussions between Visvamitra and Vasishta. The poor copies discovered in Madras have, in all probability, come from better and clearer readings. If the two Rishis were able to describe the girl whom the subject might marry at a given period they would have also stated why, due to some Karma, he will be prevented from making her his wife. When the copyist came to a gap in the leaves found in some ancient Hindu temple he was left in the dark as to the eventual



CYRUS D. F. ABAYAKOON

turn of events discussed by the two sages in this particular case and the copyist wrote something from his own knowledge. I have found that in some bundles the age of the palm-leaves varies.[2]

For quite a long time I have subjected these mysterious *ólas* (palm-leaves) to a fairly comprehensive examination. I remember a hoax perpetrated by some Madras quacks in 1938. Knowing that in Ceylon the Nadis are valued, a group of people got together and through spies learnt facts about the past of some prominent individuals. These were written down on ola-leaves and blackened over with soot. The Sinhala spy-cum-agent peeped through a key-hole to see who had come to consult the "leaves". On a subsequent date the seeker was invited to come after the search for the *Edul* Past events were correct and naturally the client thought that the future too would run to form!

The above does not prove that all *Nadis* are fake. Far from it. Those that came my way belonged, for the most part, to three distinct groups, *viz.*— *Nandi Vakya*, *Bhrigu Jataka* and *Agasthya* of the *Sapta Rishi*. In February 1939, I met a Ceylonese who had examined some *Bhrigu* bundles in Gwalior. He had stayed there for several years and had learnt the art of finding the Lagna from the face and head. On a latter visit to Gwalior he succeeded in getting more details regarding his life and those of his very close friends—details that were remarkably true and this searcher after ancient Hindu wisdom shuffled off his mortal coil in the year foretold.

An Englishman who has lived in Ceylon for well-nigh 40

---

[1] I can easily anticipate the argument of the champions of the Dravidian movement that a Sanskrit Nadi like the *Dhruva* may itself be a translation from some original in Tamil!! The counter-argument is also easy to imagine. These arguments and counter-arguments solve no problem. The irrefutable and unchallengeable fact is that these Tamil Nadis use such an enormously large number of terms in Sanskrit as would leave no doubt whatsoever that the Tamil Nadis must have been modelled on original works in Sanskrit. There is no escape from this solid and stubborn fact. Politics, political prejudices and predelictions and communal hatreds and rivalries could never alter *Facts*". Dr. R. Nagaraja Sarma, "Challenge of Nadi Literature", THE ASTROLOGICAL MAGAZINE, January 1952, PP. 23).

[2] Paul Brunton in his *A Search in Secret India* (Pp. 150–152) recalls how he met Sudhei Babu, a Brahmin astrologer of Banaras who showed him a yoga system composed of thousands of pages entitled *Bhrama Chinta* written by Bhrigu Maha Rishi thousands of years back. Brunton writes: "A 75 percent success in an initial test is startling enough to show that Hindu astrology calls for investigation but it also indicates that the later is no precise, infallible science... Yet Sudhei Babu's reading of my horoscope has stirred me to the perception that Hindu astrology is not superstitious nonsense, and that it may well warrant a deeper investigation."

years assures me that he has found amazing revelations in these *olas*. It was prophesied that he would leave for India during a certain period and meet a friend of his, in a previous birth, living in Malabar Hill, Bombay City. This forecast was strangely fulfilled when, on a visit to Bombay, he went up to Malabar Hill to breathe the cool evening air over the waves of the Arabian Sea. There he met an Indian business magnate who offered him a bungalow and a sizable pay-packet if he would only sign a five-year contract to assist him in an engineering project. The Englishman, due to his commitments in Ceylon, could not accept this generous offer (he regrets it today) and came back to Colombo. Subsequently he took another English friend to a Bhrigu reader in Colombo. In a bundle of musty *olas* was written that the person who gets the leaves read would have had a brother who committed suicide while living in Bombay. Perhaps this Englishman formed the same opinion about the *olas* as did Lord Curzon at Tanjore: "I came to India a sceptic, I leave convinced." [3]

[3] A reader of THE ASTROLOGICAL MAGAZINE, from Bunder Road, Karachi, Pakistan, wrote to me on 14th March 1951 as follows:—"I have had the pleasure of reading several articles written by you in THE ASTROLOGICAL MAGAZINE. In 1955 I was in your beautiful country. Being tremendously interested in astrology but sceptical about the Nadi branch I consulted a Nadi astrologer and obtained a complete reading of my life. What is baffling was the detailed account given of my family and my life, beginning from my great grandfather till the last years of my life. I have read some articles on the Nadis and it is generally believed that the past is most vividly and correctly given but what they say about the future is not always correct. It is almost 2½ years since I consulted the Nadi and whatever it said about the intervening period has come right. I am therefore most intrigued and would like to know more about the Nadi literature."

Some persons, in anxious haste to ascertain the dark, unknown morrow, accept as genuine any *ola* bundles which come under the Tamil name *Edu*. A very keen student of astrology and a contributor to THE ASTROLOGICAL MAGAZINE sent me what he described as an *Edu* found in Irinjalakude. It was in very old Malayalam-Tamil. On examination it contained nothing but a birth chart with birth-particulars (astronomical), the padding being a number of devotional songs written by a devout farmer to his patron deity. It had no predictions relating to his past, present or future. This same friend told me as follows:—"Perhaps you may have already heard of another source of documents which do not provide all details but correct and mysterious in certain respects giving a wide range of the past and future births. It is in half Sanskrit and it is in the custody of Sri.....in Pattanchery, T/C State." [4] (20-6-52.)

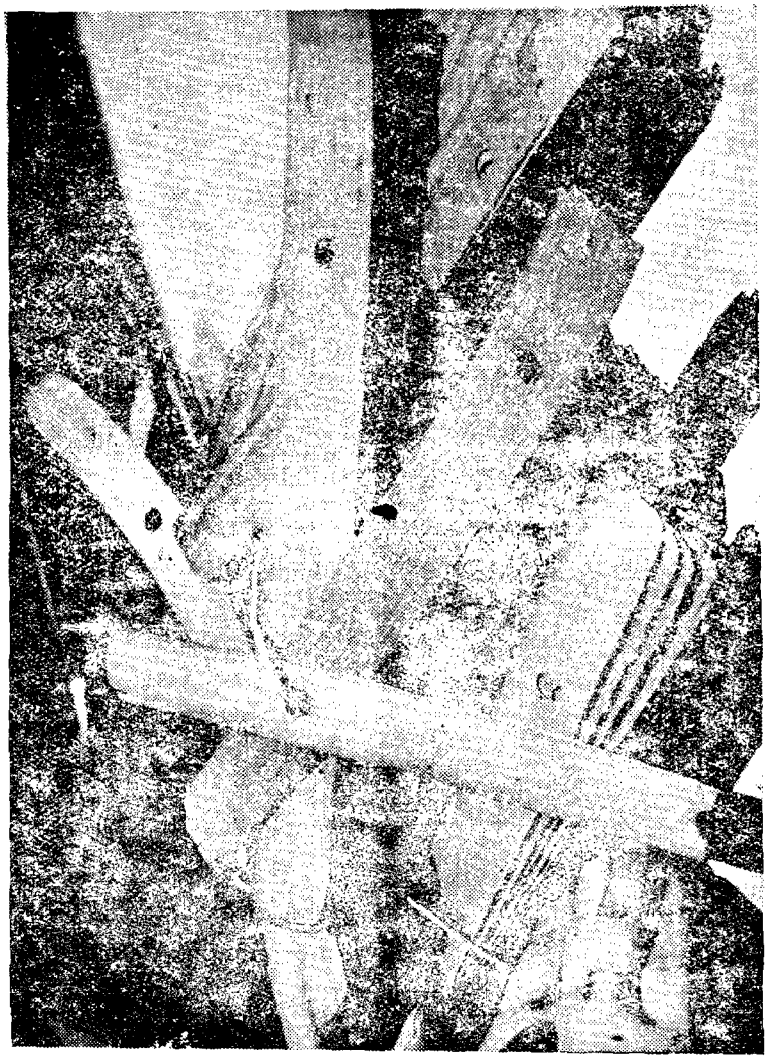
There are two distinct classes of *Jatakas*: the ones with birth-chart and horoscope details and the readings which give details when matched with a key which every person carries on his or her palm. Of the former type (horoscope system) — *Agasthya* class—there are 700 bundles in the possession of a Madura astrologer. Prof. B. V. Raman, Editor of this renowned journal, tells me that he has seen hundreds of Nadis in Sanskrit, Tamil and even Telugu and has formed his own opinion which he has so far not expressed to his numerous readers throughout the world. Of the palmistry system there are at least 42,000 bundles, all on the *Sapta Rishi* model, and in the picture provided I am seen examining a few of the bundles. These were made available to me by an Indian who had resided in Singapore for well-nigh 20 years. Although many have written about these ola-leaf prophecies made by ancient Hindu Rishis no one has thought it fit to provide photographic evidence.

The *ola* bundles illustrated in this article belong to *Agasthya Rishi* and the copies in *Grantha* have been made by one Machakendra over a thousand years back.

I shall now compare a father's leaf from the Nadi group called *Nandi Vakya* with that of his son's taken from the **Agasthya Palmistry Section.** The former is identified as *Adukku visiri sakkara irattai yoga sankhu pulli irai likithamsa* and the latter as *Sarada marai sath-guttah mukkuni-amsam pulli navam*—a mixture of Sanskrit, Sinhala, Tamil, Telugu and Pali. Philologists will, no doubt, find it extremely difficult to fix the age of the words.

[4] Sri C. Krishna Menon of Trichur, S. Malabar, tells me that so far the Nadi he had taken has not kept to the pattern indicated. Mir Bashir in an article entitled "Measured my Shadow and told my Future" (Tit-Bits, No. 3564, February 1954, Pp. 25) states that his future was correctly indicated in a very old *ola* (one among hundreds) in the possession of a Bombay Pandit. The partition of India, the communal riots and his subsequent palmistry work abroad were all clearly shown. The horoscope was got by measuring the shadow—a very old system in Ceylon. (Reprinted in the *Sunday Times of Ceylon* of 23rd September 1956, Pp. 9 under the caption "The Book of Shadows"). A few years before World War II, I was lucky to meet four venerable looking Sikh astrologers at the Colombo Fort Railway Station having come overland with bundles and bundles of cadjan leaves wrapped up in mats. They were in Sanskrit and found, according to them, in a rock temple in North India. Most of them contained the lives of persons then living in Paris, France, and they intended to take ship. They claimed that the leaves were very ancient and came from Kashmir.

In the elder person's *Nandi Vakya* there are two sections: The first states that it was the goddess Parvati, consort of Siva, who gave the vision to the Rishi to picture the past, present and future of the seeker. It marvellously reveals the locality of birth, the number of brothers and sisters and other intimate details. A strikingly true statement is made :—"When you are between 48 and 50 years and when you are in Mercury's Rahu that will be the time when you will find this reading by me." What really amazed him was the prediction: "You will get employed under Government in a department where wheeled conveyances travel about and you will get this employment in your 21st year." True, he joined the Ceylon Government Railway.



A sceptic can say that as the above facts could have come within the knowledge of a shrewd purveyor of ola-leaf prophecies manufactured by him, after ascertaining past details, the Nadi readings about the past are of no value. Part II of this bundle disproves such a justifiable accusation. This section is called the 12th *Gandam* and was taken on the same day as the first section. As in the earlier bundle it begins with some details about the goddess Parvati and to a large extent is a repetition, with some additional details, of the past which not even a very close and intimate relative could have divined. It goes on to speak of *Gandam* (*Grantha Dosha*) for wife and after some predictions about her says :—"The illness for your wife is more pertaining to defective.....necessary for the conception of children. She can conceive a girl if the *Shanthi* (prescribed) is done." The propitiation was done but no girl was born. Looks confusing isn't it? Nevertheless the *ola* says: "When you are 55 years you will retire from Government Service. At this time you should have a boy and a girl living and doing well. The girl is *provisional* because your getting a daughter depends entirely on the merit of the *Shanthi*." This curious conditional prophecy about a girl was fulfilled when, in his 55th year (after retirement) he adopted a little girl to take the place of the expected daughter and strange to say she was born on Friday, January 23, 1948 at 8-02 p.m., not long after the *Shanthi* was done! This is no doubt a gift from Parvati through another mother.

Sixteen years later the son of this retired official sought out an *Agasthya Rishi* leaf-reader who looked at the two palms for the code after applying some special oil. This led to the discovery of a set of ola-leaves, which, in certain parts, read as follows :—"His father's job will require much travelling. He will occupy a responsible post in a **department of wheeled conveyances.**" Correct—Ceylon Government Railway. We see here that both *Nandi* and *Agasthya* corroborate in a manner too clear and precise to admit of

any doubt whatsoever. The uncanny vision of *Agasthya* is heightened when he gives the father's surname too. The *Nadi* however did not mention the family name.

The *Agasthya* reading enumerates various matters which seem to be too trifling to have engaged the attention of a sage. Regarding the previous birth the record says:—"You were born into a Royal family in Kashmir. The place was hilly and almost surrounded by a lake. You usurped the kingdom from your brother by deposing him and you were cursed that hereafter you should be reborn alone, without brothers and sisters." This explains why the *Shanthi* performed by the father, as requested by *Nandi*, on the orders of Parvati, did not produce the sister. Evidently curses transcend time and mortal state. *Agasthya* says: "The birth of a further child depends on your mother doing a *Shanthi* and taking a *vow*." The left palm-imprint of this former Kashmir usurper is given below.

	Rahu		Mars Jupiter
	CHART NO. 1 RASI		
			Mercury
Lagna 16.13 Moon Saturn		Venus Kethu	Sun

Horoscope of a Kashmis Prince who dethroned his brother, usurped the kingdom and is now a doctor in Lanka. 1930, September 30th, Tuesday at 12.12 noon. Purvashada, 3rd Venus: 8-7-24. [5]

[5] Regarding the subject's profession the Rishi says: "You will qualify well in medicine and you will be a good lecturer." True. He passed out as a doctor and then, in August 1957, became a lecturer—two years after the *ola* was discovered.

There is a very strange aspect in this particular *Agasthya* horoscope. The subject (a doctor) went to the leaf-reader to ascertain whether he would marry the girl he had in mind at that time. There was no support astrologically. Instead the leaves said: "You will get married to a person unconnected with your family. Her father is not in Government Service at the time the leaves are seen by you but is respected by the Government. He is very wealthy—a landed proprietor. This girl will have a few sisters and a brother—3 to 5 in the family. Your friendship is something that started when you were 24 years old and it will end in marriage." Regarding the girl, *Agasthya* states that she too was born in Kashmir in some distant

The lines on this palm reveal the past, present and future of a former prince of Kashmir whose greed overpowered this sense of duty and loyalty. Truly the evil that men do lives after them.

era and was his wife. For participating in the usurpation-plot (an old Hindu Macbeth story) she got cursed and was reborn in the Land of the Demons to the south of the Dravida country. "She will be good to the people through her husband who will be dealing with diseases and medicines. She will be reborn in a place near the East of the Irawaddy river (in Burma) into a Buddhist family a noble family doing religious work in that country. She will not wish to get married and will remain single and will have no rebirth thereafter." This prophecy about a marriage to a doctor is as good as falsified because a different person from a different profession is very likely to marry her in the very near future. By the time this article appears in print, barring an extraordinary accident, she will be the lawfully-wedded wife of another. The above details are from the girl's leaves and the misfire is an extraordinary circumstance.

	CHART NO. 2 RASI		Kethu
Venus Saturn Rahu			Lagna 25.56
Mars	Sun Mercury	Moon	Jupiter

Horoscope of a Kashmir Princess who joined her husband in a Hindu Macbeth plot, got cursed and was reborn in Lanka. After her death she will be reborn to a Burman Buddhist family living to the East of the Irawaddy river. 1933, December 14th, Thursday at 11.45 p.m. Visakha, 2nd Jupiter: 8-11-22. [6]

Another doctor-friend of mine looked into a *Sapta Rishi* bundle

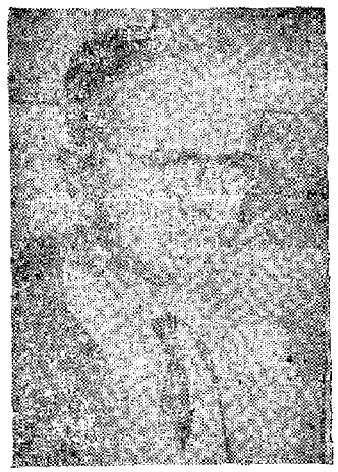
(Continued on page 162)

[6] There is a remarkable detail, *viz.*: "Her father would have been in the Government in the Rajya Sabha and then had to leave to do his own work." For the future it says: "He will have some connection with the Government and the general public. The eldest girl will have prosperity. She will have to go to foreign countries with her husband." Very accurate.

Astrology and Infant Mortality

BY *Vidyabhaskara* PROF. M. RAMAKRISHNA BHAT, M.A.

ALTHOUGH man is mortal, yet it is his ambition to keep the God of death at bay as long as he could. Accordingly the prayers of the ancient Aryans were for the gift of a long life for hundred years and more. That is why *Purush-ayusha*, human span of life, was considered to consist of 100 years. In ancient times, we are told, people generally lived to a ripe old age of 120 years. The elephant which is an exemplar for human beings in respect of strength, nobility, majesty, vegetarianism, etc., also lives a life of 120 years. The *Ramayana* tells us that during the reign of Sri Rama people enjoyed good health and long life, and there was no fear of accidental or premature death. Similarly parents never had occasion to grieve for the death of their children. Statisticians of the present day reveal that in Asia from 100 to 300 infants in a thousand die before they reach the end of the year. They say that in Asia, Africa and Latin America, a large percentage of children are attacked and killed by malaria, malnutrition and tuberculosis. Though scientists may be able to trace the cause of the abnormal infant mortality in certain parts of the world in a scientific manner, in our humble opinion, what they call the "cause" is not the whole and sole cause for it. For we believe that man reaps the fruits of his deeds done in a previous life. As he sows, so he reaps—is the rationale of this earthly life, good, bad or indifferent. As the Dark Age, *Kaliyuga*, advances, man gets more and more attached to flesh and matter as well as to the enjoyment of pleasures accruing therefrom. Consequently he forgets the Spirit or God and naturally his *Dharma*. He forgets that his human birth is for fulfilling a mission, and not for enjoying sensual pleasures beyond certain limits and period of life. Animals of a lower order of creation obey instinctively certain rules of sexual conduct, whereas man with all his powers of discrimination and knowledge of science, religion and philosophy is still a slave to his passions. In consequence of this he perpetrates many a crime, spoils his *Brahmacharya* and accumulates a heap of



M. RAMAKRISHNA BHAT

sins to be harvested in his next life, wherein he gets a short span of life, sickness, blindness or epilepsy and the like. The *Sastras* lay down that to sleep when the Sun rises and sets is a great sin. In modern society, however, with its strong political colouring, people, both sophisticated and ordinary, have to attend tea-parties, garden-parties, etc., during *Pradosha*, time of dusk, which is specially sacred to Lord Parameswara who in the presence of all the Gods of Heaven is said to undertake His Cosmic Dance, the Tandava for His supreme pleasure and for maintaining the equilibrium of the universe. It is reported that the *Pradosha* period of an hour and a half should be utilised exclusively for the worship of that Lord, lest His hosts consisting of diseases like epilepsy and lunacy should afflict the offenders. Moderners with a *scientific* bent of mind would not believe in this, nay might scoff at this idea. But, it should not be forgotten that there is also a scientific basis for this prohibition of eating, mating, etc., at that time. For, the dusk is a transitional period when the condition of the atmosphere and the earth as well as of the invisible microbes and spirits that float in the air are not quite happy and so they attack those that lack resistance, both spiritual and physical. There are still others, who, as poet Bana describes, offend their masters or Gurus by their acts of omission and commission and get their curses though unexpressed. So do others who abuse Gods and holy men. There is a saying in Kannada to the effect that a man who has been well fed need not pronounce his blessings, nor one who has been wronged his curse. All these sins are visited upon the person in his subsequent birth in the shape of fell diseases, misery, short life, early death of children, etc.

It is my objective in this article to show by means of examples culled from my records how and why the concerned subjects met with an early death. First of all we should know the yogas or planetary configurations leading to short life, nay infant mortality.

The period of *Balarishta* lasts for 8 years and a child may die in this period being afflicted by *Balagrahas* or certain evil spirits. It is also the opinion of the ancients that until a child is twelve years old, its longevity cannot be predicted, as it may die in the first four-year period as a result of its mother's sins, in the second, of the father's sins and lastly of its own sins. Between this period and 20 years one may die in consequence of *Yogarishta*, and lastly upto the age of 32 years one may quit the world on account of *Alpayus* or short life. The following are some of the yogas leading to very early death :—

1. Birth in Dinamrityu, Dinaroga and Vishaghatis. *
2. Birth in the third pada of Pushya, Purvashada and Chitta.
3. Birth in a Rasi junction which is occupied or aspected by malefics.
4. Birth in a Gandanta star
5. Birth in any *Sandhi* (there are four such junctions—one of day and night, another of two lunar days, of two Rasis, and of stars) being conjoined with or aspected by malefics.
6. If the Moon at birth occupying a kendra or the 8th house has attained the fateful degree in the particular sign.
7. If malefics occupy only the 8th and the kendras ; or only the 1st and the 8th ; or the 1st and 7th.
8. When the Moon or the ascendant is hemmed in betwixt malefics.
9. When the weak Moon is posited in the 6th, 8th or 12th.
10. When the weak Moon along with malefics is in 1, 5, 7 or 9 (8 or 12) without benefic aspect.
11. If malefics occupy the 7th and 8th.
12. If no benefic occupies or aspects a kendra.
13. If the lord of the Lagna or of the sign occupied by the Moon is in an evil house, the child dies within so many years as the Rasi is removed from Aries. If the lord of the concerned decanate or navamsa be similarly placed, the end would come off in so many months or days as the case may be.
14. When the planets in the 5th and 8th houses are very powerful malefics.

The following are the yogas for *Sadyomarana* or immediate death according to Prithuyasas:—

1. If Sun and Moon occupy the 3rd house, which belongs to a malefic, in conjunction with malefics, the child will not live beyond 3 years.
2. If the Moon occupies a kendra along with the lord of the 8th, and if the 8th house has a planet in it, immediate death is the result.
3. If Mars and the Sun should together occupy the 7th house counted from the Moon, and Rahu the ascendant, the child will not live beyond 10 days.
4. If all the malefics are in kendras, or if all the kendras are surrounded by malefics, it will not live for more than 10 days.
5. If there is a malefic in the 7th house from the sign denoted by the rising decanate, and if the weak Moon is in the Lagna, immediate death will follow.
6. If all the planets being weak occupy Apoklima houses (3, 6, 9, 12), it will die in two months or at the most in six months.
7. If the lord of the Lagna is debilitated while occupying the 7th or 8th house, the child will be practically dead, even should it breathe.
8. If the Muhurtha of birth is a cruel one, if there is at first the rise of a Kethu and then fall of meteors, thunderbolts, etc., the child will die soon.
9. If the birth is during an eclipse, a misty circle around the Sun or the Moon, and when a malefic occupies or aspects the Lagna, it will live for three fortnights or three months.
10. If the lords of the Lagna and the Rasi of the Moon and those of their amsas are eclipsed, it will die in a few days.
11. If the lords of the Lagna and the Rasi are in the 6th, 8th or 12th and are combust, it dies in so many years as are indicated by the number of the sign concerned.
12. If the Lagna-lord or the waning Moon is in the 8th, and is conjoined with or aspected by Rahu, it will live for 7 years.
13. If Rahu along with malefics should aspect the weak Moon and if the lord of the Janma-Rasi is eclipsed, death will occur in the 6th or 8th year.
14. If the Lagna-lord in conjunction with Rahu occupies the 7th, death will occur in 21 days, months or years.
15. If the 8th is occupied by malefics and the Lagna-lord along with malefics occupies a kendra without conjunction or aspect of benefics, death will occur in 7 years.
16. Add up the longitudes of the Sun and the Moon. If this sum indicates a kendra or the 9th house, and if the latter is occupied by a malefic, death will be caused by poison or drowning.

I am giving below some more yogas for infant mortality according to Sage Mrikandu :—

1. If Venus is weak and is in a house other than a kendra or kona, if the lord of the ascendant and Jupiter are afflicted by male-

(Continued on page 93)

* *Dinamrityu*:—The 1st pada of Dhanishta and Hasta; the 2nd of Visakha and Ardra; the 3rd of Uttarabhadra and Aslesha; and the 4th of Bharani and Moola. *Dinaroga*:—The 1st pada of Aslesha and Uttarabhadra; 2nd of Bharani and Moola; 3rd of U. Phalguna and Sravana ; and the 4th of Swati and Mrigasiras.

*Horoscope of Netaji Bose

BY BISHNUPADA BHATTACHARYA

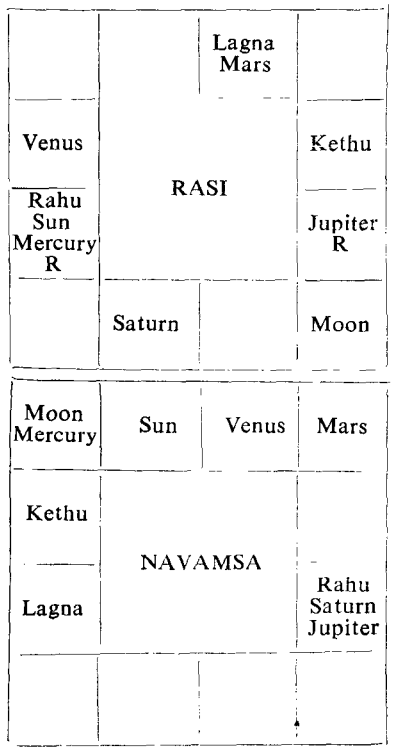
NETAJI'S father records his birth at Cuttack on 23-1-1897 as follows: "A son born—a few minutes after 12 (between 12 and 1 p.m.)." There is nothing more definite than that to go by.

Most astrologers have taken his birth time to be 12–15 p.m. According to some it is the Indian Standard Time (which had not been introduced then), while according to others it is the Madras Time. In either case, the Lagna is Mesha—the difference being in degrees only.

Only a few astrologers, however, from the trend of his life-events, are inclined to think the Lagna is Taurus, and I agree with them. With Mesha Lagna, lord of 10th, Saturn would be in the 8th, and the native's ideal of life would consequently have been quite different from what we know. Besides, with Mesha Lagna, the Moon, lord of 4th, would be in the 6th, and consequently Netaji, instead of dedicating his life to the service of his country would have been a man of low stature.

Again, with Mesha Lagna, according to Parasara, his span of life would have been short—not exceeding 40 years. And further, with Mesha Lagna his general trend of life and life-events would have been quite different.

There can be no doubt that he was born near about 12–15 p.m. I have therefore taken his birth time to be 12-20 p.m. (Madras Time), at Cuttack. (Long.–85° 54′ E., Lat.–20° 28′ N.). This gives the L.M.T. of birth as about 12–42–40 p.m.



Planetary Positions

Sun 281° 10′; Moon 157° 42′; Mars 49° 31′; Mercury 279° 24′ R; Jupiter 136° 30′ R; Venus 326° 19′; Saturn 215° 38′; Rahu 293° 32′; Kethu 113° 32′; and Lagna 30° 42′.

Balance of Sun's Dasa—1 year and 13 days.

Note: (*a*) Lagnadhipati Venus in the 10th, proceeding towards its exaltation; (*b*) Vyayapati (lord of 12th) Mars in Lagna; (*c*) Saturn, lord of 9th and 10th posited in the 7th and in opposition to Vyayapati Mars in the 1st.

1. According to the text-books *Jatakabharana* and *Jatakamoda*, birth in Taurus Lagna:—

(*a*) endows the native with higher qualities; (*b*) makes him rich, respectful to his superiors, amiable to all, calm and dignified; and (*c*) gives him fame and renown and power to subdue his enemies, and many other qualities of the head and heart.

2. Being born in *Ahbijit Muhurtha*, he has been universally acclaimed as a great leader (Netaji) by the people.

3. Venus, the lord of Lagna, is in his own navamsa and in the birth chart is posited in the 10th (a friendly sign) and proceeding towards its exaltation and is in opposition to Jupiter. This gives the following results:—

(*a*) his deeds become famous; (*b*) he commands universal respect; (*c*) he is the most distinguished and powerful member in the family geneology (*kula-sreshtha*); (*d*) he is honoured and respected even by the kings; and (*e*) even in his exile, he enjoys various amenities.

4. Mars, lord of 7th, is posited in Lagna. This gives the following results:—

(*a*) makes him a votary of truth and a powerful worker; (*b*) gives him patience, organizing abilities, incomparable power and a kingly appearance; (*c*) endows him with military genius and powers of generalship; and (*d*) makes him a violent revolutionary and liable to frequent imprisonments.

5. Jupiter in the 4th has given him a liberality of mind, a sweet temperament and love for the people and made him a devoted servant of his motherland.

6. The Moon in the 5th gives him love for the people without any distinction of caste or creed and an intense love for his country.

7. Saturn, lord of 9th and 10th, being in the 7th, indicates his utmost sacrifices for the good of the country and the people.

8. Saturn (lord of 9th and 10th) is posited in the 7th (the sign of Mars) and is associated

* Translated from Bengali into English by Dr. S. N. Dutt (maternal uncle of Netaji).

with *Vyayapati* Mars in the 1st (opposition). This gives rise to what is known as "Pravrajya Yoga" and indicates extensive travels and even a life *in cognito*.

9. Jupiter, lord of 8th, being retrograde in the 4th, indicates his leaving his home and his country. In the horoscope of Sri Ramachandra, Saturn, the lord of the 8th was exalted in the 4th. This gave rise to his 14 years of life *in eognito*. In the horoscope of Netaji, the lord of the 8th, being posited in the 4th, indicates a similar or analogous result.

10. The Sun, Mercury and Rahu in the 9th indicate a high political understanding, a lofty idealism, great fame and his intense popularity with the people.

Venus in the 10th confirms the same results.

11. *Raja Yogas*—

(*a*) Sun and Mercury, lords of the 4th and 5th respectively, being posited in the 9th with Rahu have become powerful *Rajayogakarakas*. This has caused the native to be honoured and respected even by the kings. With Mesha Lagna, this yoga would not have been possible; (*b*) according to Parasara, birth soon after midday (or midnight) is also a powerful Rajayoga; (*c*) Venus being posited in the 2nd from the Sun. This is called a *Vesi* Rajayoga; (*d*) Jupiter being placed in the 12th from the Moon. This is called Anapa Rajayoga.

To find four such important Rajayogas in one birth chart is rather unusual except in the case of a personality like Netaji.

12. Saturn, lord of 9th and 10th, posited in the 7th, is in association with *Vyayapati* Mars in the 1st (opposition); and Sun and Mercury, lords of 4th and 5th, are posited in the sign of Saturn and aspected by him. This gives rise to what is known as the *Nripa-Tapas Yoga*. Mention has already been made of Pravrajya Yoga.

13. The lord of the 7th is in the 1st, and the matrimonial planet (*Strikaraka*) Venus is in the 10th. This indicates a beautiful wife; but the configuration of Mars in the 1st, Saturn in the 7th and Rahu in the 9th indicates a marriage into another nationality and not in conformity with the usual social customs.

Mercury, lord of 5th, is posited in the sign of Saturn and the Moon is posited in the 5th. This indicates that the native will have only one female issue.

14. According to rules laid down by Parasara, Netaji's span of life is a long one—at least 70 years. The lord of the 4th is in the 9th, and Jupiter is in the 4th, fully aspected by Lagnadhipati from the 10th; and above all, Jupiter, lord of 8th is retrograde and posited in the 4th, a 'fixed sign' (*sthira-rasi*). All these planetary configurations indicate that the native will die in his own house after his return to his motherland. If Taurus Lagna be correct, then he could not have died in a foreign country under such dubious circumstances — unknown, unsung and unwept.

Vimshottari Dasa Results

15. According to the Vimshottari method of Dasa calculation, *from 18-10-1917 to 12-3-1921*, Netaji had Rahu Dasa, Jupiter Bhukti. Jupiter being retrograde in the 4th, and Rahu being in the 9th, in association with the lords of 4th and 5th, he went to Europe for higher studies (I.C.S.) during this period.

16. From 12-3-1921 to 18-1-1923, he had Rahu Dasa, Saturn Bhukti. The lord of 9th and 10th being posited in the 7th indicates self-sacrifice and self-abrogation. He therefore resigned his I.C.S. during this period.

17. At the age of 36 years, 13 days, he entered into Jupiter Dasa, Jupiter Bhukti (6-2-1933 to 24-3-1935). Jupiter, lord of 8th, being retrograde in the sign of Sun indicates his father's death during this period.

18. (*a*) At the age of 40 years, 8 months, 13 days, Jupiter Dasa, Saturn Bhukti ended (24-3-1935 to 6-10-1937). Thereafter from 6-10-1937 to 12-1-1940, he passed through Jupiter Dasa, Mercury Bhukti. Mercury, lord of 5th, being posited in the 9th in conjunction with the lord of 4th—a Rajayoga is constituted—and as Rahu is also posited with these two *Rajayogakaraka* planets, Rahu also becomes *Yogakaraka*. Therefore, Mercury, Sun and Rahu, all being in the 9th, it is only natural to expect that during the sub-period of any of the above three planets, the native would enjoy immense power, prestige and honour, and this has actually happened; for during Jupiter Dasa, Mercury Bhukti, Netaji occupied the Presidential chair at the Haripura and the Tripuri Congress, was given a royal reception and was highly honoured throughout the country. (*b*) But in spite of the *Yogakaraka* of Rahu, his association with Mercury in the sign of Saturn detracts to a certain extent the power and influence of Mercury. Besides that, Jupiter, lord of 8th, is in an inharmonious (6th/8th) relationship with its sub-lord Mercury, and Jupiter being an enemy of Mercury, the latter's power for good is curtailed further. Furthermore, Mercury is in the navamsa of Jupiter, or in other words, in the navamsa of an enemy and the lord of 11th. It is therefore no wonder that for these reasons Netaji was forced to resign his Presidentship of the Tripuri Congress towards the latter part of the sub-period of Mercury under Jupiter.

It may be mentioned here in

passing that later on in life, during the sub-period of Sun also under Jupiter (18-8-1943 to 6-5-1944), Netaji was again honoured as a king and enjoyed immense power in S.-E. Asia.

19. Jupiter Dasa, Kethu Bhukti followed from 12-1-1940 to 18-12-1940. This period indicates his imprisonment.

20. Thereafter Jupiter Dasa, Venus Bhukti lasted from 18-12-1940 to 18-8-1943. (From 43 years, 10 months, 25 days to 46 years, 6 months, 25 days). Jupiter and Venus are in opposition to each other and therefore closely associated, while retrograde Jupiter, lord of 8th, is posited in the 4th. Hence Jupiter Dasa, Venus Bhukti indicates his departure from his home and country. Perhaps during the latter part of the same Bhukti, he also left Germany for South-East Asia.

21. (*a*) Thereafter from 18-8-1943 to 6-5-1944, he had Jupiter Dasa, Sun's Bhukti and his activities in S.-E. Asia as the head of the Azad Hind Government (Rajayoga) and the Supreme Commander of the I.N.A. are well known, proving the *Rajayogakaraka* of the Sun in his birth chart. (Compare with results of Mercury Bhukti under Jupiter). (*b*) But Sun, lord of 4th, is posited in conjunction with Rahu in the 9th, an inimical sign, while retrograde Jupiter, lord of 8th, occupies the 4th. For this reason, during the currency of Jupiter Dasa, Sun's Bhukti, Netaji lost his mother.

22. (*a*) Thereafter from 6-5-1944 to 6-10-1945, he had Jupiter Dasa, Moon's Bhukti. During the sub-period of the lord of the 3rd, he led his forces to the borders of India through Burma. (*b*) But then again, this sub-period of Moon also indicates his disappearance from the field of action, because retrograde Jupiter, lord of 8th, posited in the 12th from the Moon and in the 4th from Lagna, stands in an inharmonious *dwirdwadasa* (2nd/12th) relationship with the Moon.

23. Thereafter from 6-10-1945 to 12-9-1946, he had Jupiter's Dasa, Mars Bhukti. This period also indicates his disappearance and life *in cognito*, because Dasa lord retrograde Jupiter, lord of 8th, is posited in *Griha-bhava*, and the sub-lord *Vyayapati* Mars is posited in Lagna and in direct opposition to Saturn.

24. According to the science of astrology, Netaji is alive even to this day (10-10-1958). His present age is 61 years, 8 months, 17 days. At present he is having Saturn Dasa, Venus Bhukti and this will last upto 27-1-1959. (Age 62 years, 4 days). Thereafter from 27-1-1959 to 9-1-1960, he will be having Saturn Dasa, Sun's Bhukti. (Age from 62 yrs., 4 days to 62 years, 11 months, 16 days). This sub-period of the Sun and Saturn indicates his return to his home and motherland.

Reason : It is clear that retrograde Jupiter, lord of 8th, being posited in the 4th (*Griha-bhava*) was the cause of Netaji's leaving the country and had prevented his return during its main Dasa. But with the advent of Saturn Dasa, Sun's Bhukti, conditions will have changed.

(*a*) Dasa-lord Saturn, as owning 9th, if posited in the 7th, causes the native to return to his home and his friends; and as lord of the 10th, it is related to his father's home and his father's near relations. (*b*) The lord of the 4th, if posited in the 9th, also indicates the native's return to his home. (*c*) The sub-lord (or sub-dasapati) Sun, being lord of the 4th (*Griha-bhava*) would also indicate the native's enjoyment of his home environments during its Bhukti under favourable circumstances. (*d*) The sub-dasa-lord Sun being posited in the sign of Saturn (lord of 9th) and aspected by him also indicates the native's return to his home during Saturn Dasa, Sun's Bhukti.

The above astrological rules about the home-coming of a native would apply to any chart, and as all the above-mentioned planetary positions, configurations and conditions are to be found in the chart and Dasa-Bhukti of Netaji, we may reasonably expect that he will return during his Saturn Dasa, Sun's Bhukti, *i.e.*, between 27-1-1959 to 9-1-1960.

I shall not be surprised even if Netaji makes his appearance when Mars passes over its exact degree in his radical chart on 9th/10th March 1959.

May God bless him and preserve him for the benefit of mankind. I am well aware that doctors differ. If other astrologers differ from my own findings, I shall appreciate very much their learned criticism.

ASTROLOGY AND INFANT MORTALITY

(Continued from page 90)

fic aspect, if Saturn is in the amsa of the Lagna, and if he has the aspect of Kethu, the child will die within a year.

2. If no benefic is posited in a kendra, if Saturn being posited in an amsa of Venus is aspected by Kethu and Venus, it will be within two years.

3. If Saturn is in an amsa belonging to Mercury and receives the aspect of Mercury and the Sun, it will be within three years.

4. If Saturn occupying an amsa of Jupiter receives the aspect of the Moon and Jupiter, death will occur in four years.

5. If Saturn occupying the amsa of the Sun is aspected by the Sun and Venus, death will take place in five years.

6. If Saturn is in the amsa of the Moon receiving her aspect, and if the lord of the Lagna is in the 12th house, the maximum lease of life is six years.

7. If Saturn being in the amsa of Pisces receives the aspect of Venus, it will be in 8 years.

8. If the amsa of Saturn is Capricorn and if he is aspected by Mercury, it will die in 10 years.

9. If the amsa is Sagittarius, and if Saturn is aspected by the weak Moon, it will be in 11 years.

10. If the amsa is Aries and the aspecting planet the Sun, death will occur in 12 years.

Now let us consider some examples:

In Case No. 1[1], the Sun is in the 11th bhava, Jupiter in the 2nd. The ascendant is the 10th degree of Cancer. Herschel occupies the 6th degree of Lagna. The very first thing we have to consider in this case is the utter weakness of the Moon, owner of the ascendant, as the birth took place on Amavasya or New Moon day. The malefic Mars aspects the Moon very powerfully. All the malefics are in kendras and kona. Note also that Jupiter is not in kendra, as he has gone to the 2nd bhava. There is strong *Panchamarishta* as two malefics are in the 5th house. There is a malefic in the 7th house from the sign indicated by the rising decanate, and the Moon too is weak though not in the Lagna. Look at the first yoga given above according to Sage Mrikandu. Those conditions are satisfied to the extent of about 60%. See Yoga No. 3. Saturn is in the amsa of Mercury and receives the aspect of both Mercury and the Sun. Hence it should have died within 3 years. Remember also that not a single benefic is in a kendra. A superficial glance at the chart would make one wax eloquent on the excellent yogas like Kesari, Ruchaka, Hamsa, etc. But what is the use of all that when the *Balarishta* is so powerful? What is the earthly benefit of the bright Sun to a blind man?

In Case No. 2[2], the birth was at 6-18 p.m. which was *Sandhyakala*. See how the Lagna is afflicted by the presence of Rahu; by Saturn in the 11th and the Sun, Mercury, Kethu in the 7th; and Venus in the 7th is not helpful either. Malefics are in the 1st, 7th and 8th (also in the 11th). Both the Lagna and its lord are powerfully aspected by Saturn. The Lagna-lord, though in exaltation, is in a Dusthana along with Mars and Mandi and in Vipattara. The 5th from the Moon is also tenanted by malefics. Lord of Lagna-decanate, *i.e.*, Mars, is debilitated and in a Dushtana. Death took place in Rahu's Dasa, Budha's Bhukti and Kethu's Antara therein. Mercury and Kethu who are in the maraka place from Lagna and Rahu are within one degree from each other. The presence of Rahu in the Lagna which is aspected by Saturn who presides over burial grounds suggests that the child must have died of some bad disease caused by an evil spirit haunting the cremation ground. Note also the navamsa of Rahu, the serpent, denizen of Patala. It is Moola-1 presided over by demon. The child died of epilepsy. The day of birth was a Saturday and of death also was the same. This factor is very significant inasmuch as the disease afflicting the child was one belonging to the nature of Saturn. At the time of death too Saturn and Rahu were together in Scorpio, the 12th house from the ascendant at birth. Mars at death was in Sagittarius. The Lagna of death is understood to be Aquarius which was the Moon's position at birth. On the day of death the Moon had gone to the 8th house from Janma-lagna, whose lord again is aspected by Saturn at the exit too. The ascendant at death is the 3rd from the initial one. That is as good as the 8th.

The native of Case No. 3[3] lived for about six months. Birth was on Amavasya though at the time of birth it was just over. Balance of Sani Dasa was 17 yrs., 4 months and 13 days.

Thula Lagna with Saturn in it (though retrograde) is supposed to give Rajayoga. Two benefics are aspecting the Lagna. With all these the God of death would not spare the child. Why? The Lagna-lord has gone to the maraka place along with its lord.

The malefic Saturn in the Lagna is aspected by another malefic, Mars, who is also very strong. Thus the lord of Lagna is considerably afflicted. The presence of Jupiter there does not mend matters appreciably, as the distance between the two (Venus and Jupiter) is about 18 degrees. The Moon, owner of the 10th house, is combust and in association with other malefies. The 4th and 10th kendras too are occupied by malefics, and the latter kendra is aspected by two powerful malefics, Saturn and

Figures in brackets denote Navamsa positions.

[1] Female born on 10-5-1956 and died on 3-1-1957, lived for about 8 months. Lagna (6) and Jupiter (12)—Cancer; Saturn (6) and Rahu (8)—Scorpio; Mars (4)-Capricorn; Sun (8) and Moon (7)—Aries; Mercury (2) and Kethu (2)—Taurus; and Venus (9)—Gemini.

[2] Male born on 9-7-1955 and died on 25-2-1956, lived for about 8 months. Lagna (5) and Rahu (1)—Sagittarius; Moon (10)—Aquarius; Sun (1), Mercury (7), Venus (9) and Kethu (7)—Gemini; Mars (5) and Jupiter (7)—Cancer; and Saturn (1)—Libra.

[3] Male born on 15-3-1953 and died in September. Lagna (2) and Saturn (7)—Libra; Rahu (3)—Capricorn; Moon (5), Mercury (6) and Sun (4)—Pisces; Mars (2), Venus (3) and Jupiter (8)—Aries; and Kethu (9)—Cancer.

Mars. When *Karmasthana*, its lord and the Lagna and its lord are rendered powerless, how can the *Atman* stay in the body? Again, the weak Moon in conjunction wish malefics is in a Dusthana, *viz.*, 6th. The 5th house from the Moon is occupied by a malefic and afflicted by malefic aspects thereby causing very strong *Arishta*. The Lagna-lord afflicted by malefic conjunction is in the 7th house. Saturn being in the amsa of Venus is aspected by him. This is a part of one of the conditions mentioned by Mrikandu for early death. If you take Chandra Lagna, there is the powerful malefic in the 8th house. And it was in the dasa of this planet that both birth and death took place. The child could not survive even the Bhukti of Sani. Now look at the star occupied by Sani. It is Chitta-3 which happens to be the *Vadhatara*—7th from the natal one. The lord of Chandra Lagna is conjoined with the lord of the 8th (who is aspected by Saturn—which is an Alpayuryoga) and another malefic

According to Sage Garga, the presence of the Moon in the 11th for the night birth should ward off a crore of faults, but in Case of No. 4 [4] you see death overtaking the child in about a month. Why? Strong malefics are in the 5th, 7th and 8th houses. Lagna is aspected by Saturn. No kendra is occupied by a malefic. The lord of the Lagna too is aspected by Mars. The lord of Lagna-navamsa, Mercury, is in a Dusthana along with the lord of the 8th. There are strong malefics in 5th and 8th. There is strong *Panchamarishta*. Death took place in the Bhukti of Jupiter in the Dasa of the Sun who is posited in the *Vadhatara*, being lord of the 8th house from the Moon and one of the strong malefics causing the *Arishta*. The lord of Bhukti too is the owner of the Lagna. On the day of death the Sun had just entered Virgo, the 7th house from the natal ascendant afflicted by Saturn. In this case too Lagna of death coincides with the position of natal Moon, who has gone to the 7th house, *viz.* Cancer, from her original position. The star in the latter day was again Aslesha, a *Vadhatara*.

[4] Female born at 9-30 p.m. on 4-8-1952, died at 3 p.m. on 16-9-1952. Balance of Sun's Dasa was 3 years, 4 months and 6 days. Lagna (6)—Pisces; Jupiter (8)-Aries; Sun (9) and Kethu (12)—Aries; Mercury (1) and Venus (1)—Leo; Saturn (3)—Virgo; and Mars (2)—Libra.

ASTROLOGICAL AFFILIATIONS OF RELIGION AND THEOLOGY

(*Continued from page 14*)

that Jaimini viewed as Supreme Lord Siva. In the long and progressive evolution of theological controversies and discussions, only Siva and Vishnu have been candidates competing with one another for supremacy.

(7)

Let me leave Jaimini here, for the present, and place before the readers the views contained in another astrological treatise published by the Curator of the Government Oriental Manuscripts Library, in the Oriental Series of that Government.

The work is *Daivajnyaabharana*. Astrological affiliations of religion and theology are explained in the 13th section of the work in connection with analysis of the 5th house. The analysis is found on Pp. 125—126. The author observes in one place that religio-theological inclinations would be found by reference to the planet occurring in association or conjunction with the ruler of 5th house. Subsequently, another standpoint is furnished. It is stated that the planet actually situated in the 5th house would determine the God or deity to which allegiance or homage would be paid. The text deserves to be carefully examined, and what I have attempted, here is only the result of popular and superficial perusal.

Sun in the 5th is associated with worship of the Sun-god, and Lord Siva. Here, the Sun is the indicating planet, and the deity worshipped should be taken to be different. Moon in the said place is responsible for worshipping and controlling evil spirits like *Yakshinee*. Guru, placed that way, would indicate devotion to Vishnu, as well as to Skanda, who will be worshipped by a subject who would also be undertaking a religious or ceremonial fast. Sukra would determine worship of *Chamundeswari*. The text seems to be somewhat in correct. The editor has suggested an amendment. But, it is possible to keep the text as it is, if a slightly different interpretation is adopted. If Sukra be the lord of the 5th house, and occupy the 7th a person would become a devotee of *Chamundeswari*. Sani in the said place, 5th would suggest the subject being devoted to worship of devils, evil spirits and so forth. Rahu or Kethu would suggest the person being engaged in worship of these gods, for the purpose of harming or injuring others by means of Black Magic.

Then, the author passes on to statement of the position on the basis of rulership of the concerned house. If, Budha be the ruler of the 5th, (this house is named by the author as Vikrama) a person becomes a philosopher endowed with knowledge of Brahma, the Absolute. If Guru be the ruler, the person concerned will be devoted to Lord Vishnu to whom religio-theological allegiance would be paid. If Sukra be the ruler, the subject would be a devotee of the sons of Girija or Parvathi,

(*i.e.*, Vinayaka and Skanda). If Sani be the ruler, religio-theological preferences would be centering on Lord Vishnu. Readers will be able easily to note that the account given by the author of *Daivajnyaabharana*, agrees, in some respects with the one given by Jaimini, and in others differs from it. There is, however, one supremely important difference, which deserves very careful notice and study.

While, Jaimini has grounded his account on the navamsa of atmakaraka, the author of *Daivajnyaabharana* has shifted on the emphasis to the 5th house.

There is discernible a further difference. The author of the *Aabharana* has indicated conclusions both from the nature of the planets actually standing in the fifth and from the planets in turn enjoying the rulership of the said fifth. But, Jaimini has not given any conclusions, connecting the planets with the rulership of the cardinal navamsa emphasized by him. The deities however, seem to be the same in both accounts, with some special emphasis on Siva and Vishnu.

Readers will now understand easily, that religious and theological leanings, preferences and loyalties are by no means to be regarded as merely accidental, or as dependent merely on chance, one's whims and caprices, and other irrelevant and adventitious circumstances.

(8)

I leave the atheists alone. This discussion has been written only for the attention of theists and believers. Believers have considerable difficulty in making the correct choice. Some of these have deep attachment to family traditions. They usually focus devotion on the deity worshipped by clan and family. (*Kuladaiva* or *Kutumbadaiva*). But, there are many others who are not in a position to fall back on the family moorings. These are confronted by a miscellaneous mass of religious and theological literature and by the sanctimonious utterances of professional politicians turned philosophers, and professional philosophers transformed into politicians overnight, as it were. These go about proclaiming that there is only one God, and that God is differently described in different religious systems, either as Krishna, Rama, or as Karim, Rahim, Jesus and so forth. Such a sort of cosmopolitanism is dangerous, and is bound to degenerate into the most rabid forms of atheism and irreligion.

If religion were merely a matter of some rites and rituals, some ceremonial observances, etc., one may be indifferent to these. But, religion is live and dynamic. The final goal of religion is realization of the Supreme Power. Realization can be secured only by consistent and courageous practice of the discipline laid down by yoga system, for the purpose of attainment of psycho-sometic purification, and for the purpose of transforming the body of aspirant into a receiving-set registering intimations of immortality.

If, devotional attention is to be concentrated on the Supreme, the aspirant should know all about the nature and characteristics of the Supreme to the extent to which such knowledge is vouchsafed for mankind. Who is the Supreme Power that is to be worshipped, according to the complex, complicated, and elaborate methodology of yoga? Is the Power Siva or Vishnu?

It would be frustration, mere waste of time and energy if an aspirant went on shifting his religious allegiance from deity to deity, like a decimal dot, in a spirit of so-called experimental investigation. An aspirant should arrive at a correct decision. If he wavers or fails, the consequences would be disastrous. Devotional approach should be directed to that Supreme Power which alone would be able and competent to liberate an aspirant from the apparently timeless penitentiary of transmigration (birth-death-series).

Would Allah do it? Would Christ do it? Would Siva do it? Would Vishnu do it? These questions will have to be boldly faced, and each aspirant has to arrive at his own solution and answer. There is absolutely no point in the argument that all are different names of only one God. There are gods and gods. Only that supreme God is to be worshipped who will liberate an aspirant from birth-death-series, and confer on him the eternal and unalloyed bliss of *Moksha*, or liberation from time-taints and time-bondages. A namby-pamby cosmopolitanism in religion and theology is a negation of all religion and theology. So, the conclusion follows, that for purposes of yogic meditation, it is absolutely indispensable that an aspirant should first settle and determine for himself the nature and attributes of the Supreme Power that is to be worshipped.

(9)

Leaving the metaphysical question an open one, it becomes necessary to investigate whether the stalwart authors of classics on *Advaita* system, had stressed oneness of Siva and Vishnu. It will be admitted without doubt or controversy that Vachaspati Misra is the most illustrious and spectacular personality in the history of philosopy. He has written classical treatises on all the six *Darsanas*, but, he was a follower of *Advaita*, as his *magnum opus* Bhaamati commentary of Sankara's *Bhasya* on Vedanta sutras would amply demonstrate.

(Continued on page 169)

Significance of Fingers in Palmistry

BY N. L. DESAI, B.COM., LL.B.

THE two hands of man may be taken to symbolise his dual power, on the one hand of acquiring the higher spiritual values of life and on the other of dominating lower physical matter and acquiring mastery over it. Yet like all the forces manifesting in the physical world the hand of man which is capable of blessing may become a curse according to the desire and will of the human being.

As pointed out by Alexis Carrel the hand is able to kill and to bless, to steal and to give, to sow grains on the surface of the fields and to throw grenades in the trenches; but what is this hand without those five small levers, each composed of three articulate segments which are mounted upon the metacarpus and the bones of the wrist—those fingers which are the instruments of the sense of touch, without which the other senses would be comparatively useless and because of which the hand carries out one of the highest functions of man namely cognition? The importance of the study of the fingers in palmistry, therefore, cannot be overemphasised.

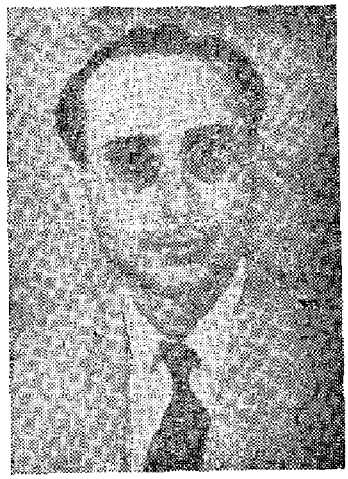
Broadly speaking, the fingers represent the mind, and the palm the material world hence in the study of the science of the hand the fingers take the priority as their formations easily determine the predominating mental characteristics of man.

All the four fingers merit joint as well as separate consideration. The first or the forefinger is the finger of Jupiter, also called the index finger; the second is the finger of Saturn or the Medius or the middle finger; the third is the finger of Appolo or the Sun and is also known as the Annular or the ring finger and the fourth is the little finger known as the Minius or the finger of Mercury.

The fingers are of uneven length though in many cases the first and the third fingers are more or less found even. As between the first and the second finger normally the first finger is about one centimeter shorter than the middle finger. The normal little finger terminates at the third joint of the ring finger meaning the place at which the top or the nail phalanx begins. The normal adult's fingers would therefore, measure up as follows:—

Length of the	first finger	7.5 cms.
,,	second ,,	8.5 ,,
,,	third ,,	7.5 ,,
,,	fourth ,,	6.3 ,,

According to certain scientists and medical men, particularly Dr. Carl Gustav Carus, who lived during the 19th century and who was a personal physician to the King of Saxony, the normal length of the hand with the wrist should be equal to the height of the head counting from the occipital protuberance to the summit of the head. The length of the middle finger with the knuckles should be equal to half the length of the face and without the knuckles it would come to about one centimeter less than the



N. L. DESAI

length of the palm. The standard lengths of the hand given by Dr. Carus are as follows:—

Age.	Length of the Hand (without the Wrist).
New Born child ...	6 cm.
10 years ...	10 cm.
15 years ...	16 cm.
25 years ...	18 cm.

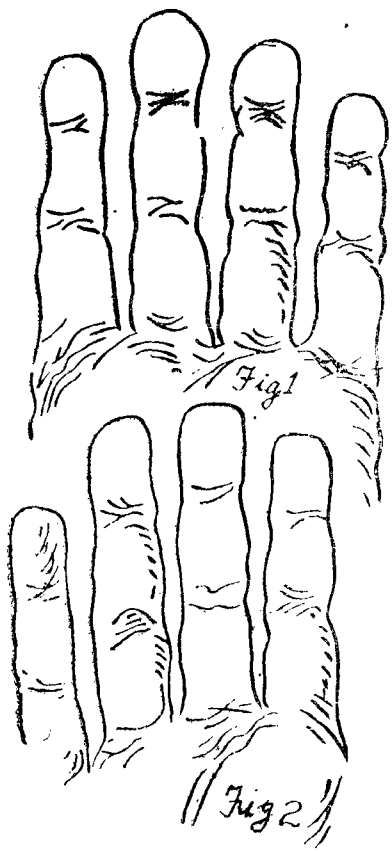
The length of the fingers is important because it is related to the degree of intellectual development. Fingers longer than normal may indicate too abstract an intellect, which may sap the vitality and mar the instinct. The tendency of the person in such a case would be towards introversion. When the first and the third fingers are of equal length and the little finger is considerably longer with abnormal digital formation it would be indicative of feeble and emotional nature. This point is dealt with elsewhere in this article.

The fingers should not only be proportionate in length but also in their general size and formations. They must be smooth, straight and symmetrical. They must not be crooked. The crooked fingers can only tentamount to lack of correct approach and proper perspective towards life and living. They tend to make a person cautious and evasive and at times full of fear and eccentricities. If the first finger is crooked, it would indicate a person who will have to toil and moil with uneasiness, sorrows and disappointments. At times a feeling of remorse, a spirit of atheism and humility or dullness might overtake him. If the middle or second finger is crooked it makes a person melancholy with morbid and apprehensive attitude of the mind. The mind in such cases may tend to be filthy, superstitious, secretive and the person may be subjected to a feeling of envy, jealousy, greed and a spirit of fanaticism and superstitiousness might pervade his being. When the ring finger is crooked it would reveal the subject to be of a boastful disposition with a love of exaggerating things and an aptitude for gambling and a mind avaricious and corrupt. The person would be vain, extravagant and to an extent stupid. When the little finger is crooked, it gives a swindling and a cunning nature.

Persons with smooth fingers on the contrary are emotional and are far more susceptible to passions as opposed to temper. Their inspiration for work is sometimes derived from wrong sources, which create trouble for them placing them in a precarious position, yet generally they are successful in business and life, though an element of danger or at least uncertainty would be looming large.

The types of fingers in palmistry are distinguished and grouped on the basis of the tips of the fingers, which evidently make them important for study. The finger tips are classed as spatulate (Fig. 1) that is broad and flat-looking, square (Fig. 2), conic (Fig. 3) or rounded or pointed (Fig. 4) This, however, is an artificial classification and few hands have all the fingers of the same type. Generally differences are noticed in the second and the ring finger. The index and the little finger is mostly conical.

The spatulate tips (Fig. 1) which are the broadest bestow the person with originality, who is more disposed towards the practical side of life, with a power to instil confidence in others and inspire them to accomplish with success and confidence the work on hand. The person would be sincere in attachments as his affections are not likely to be misplaced. Being active, original, and enterprising he is not likely to follow the accepted and



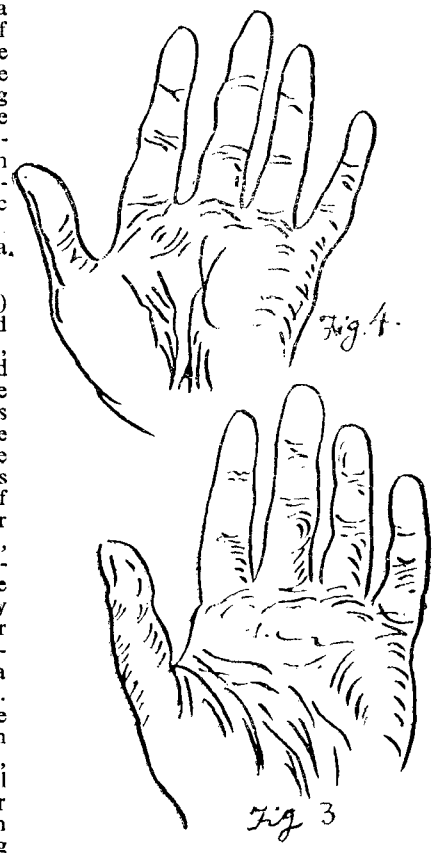
established ways of accomplishing things, going about his own way caring little or nothing for conventional methods. The first finger when spatulate gives restless disposition, variable nature and moody temperament with inconstancy of purpose and of aim in life. Materialism in ethical matters, inclination to superstition, struggle for power and authority and for a position in society are some further attributes. The attributes of the spatulate second finger are a great bodily and mental activity and a power of endurance. The ring finger when spatulate endows with a love of speculation and gambling but in a limited sense, as it is tampered by practical realisation of ideals. Dramatic abilities, love of colour, painting, etc., are some further attributes. When the little finger is spatulate it indicates ability to manage all the business affairs, but there may often be a desire to change the line of business.

The square fingers are easy to recognise (Fig. 2). They bespeak of reason, judgment and order, system, arrangement and regularity. The person with the square finger tips acts as per rules and regulations in all matters, loves punctuality, and strictly observes all social customs. He can be a good accountant, secretary, librarian, mathematician and a scientist. In the field of sports, he would excel in those games in which precision and accuracy is essentiat. He loves to dress and is methodical in habits.

When only the first finger is square at the tip it indicates love of truth, of obedience to the law of the land and of steadiness in the pursuit of aims and objects. The square tip of the second finger goes to show earnestness, prudence, power of taking responsibility, trustworthiness and a sound judgment. The square tip of the third finger shows a realism in the field of art and literature, and the person is endowed with a strong sense of rhythm and form. The square tip of the little finger represents scientific reasoning, perception and order in thought, with an inclination towards the study of scientific subjects. It indicates pedagogic gift trade or business abilities and a talent for organisation.

The conic finger tips (Fig. 3) chiefly govern the mind, ideal, art and intuition. They stand for fine taste, kindness and impulsiveness. Endowed with an aesthetic sense, with a love of weird and mysterious, the subjects often like flattery. In every case the degree or the extent to which these qualities make themselves felt is directly dependent on the extent of the cone formed by the finger or fingers. If the cone is less pronounced, the person will partake certain qualities of the square or the spatulate type, but if the fingers are perfectly conical, the person would consider the precision, punctuality and regularity of the square type as not only a restraint but an undesirable nuisance. The persons with conical tips of the fingers do possess in a certain measure talent, quickness of mind, perception in thought and a natural power of intuition, often either coming in conflict with reason or in certain cases overcoming it. Being by nature receptive, responsive and emotional, they are apt to be inconstant in their affections.

When only the first finger is conic, it shows genuine religious feelings, an ideal comprehension in social matters, a study of philosophy and almost a sense of adoration of the things beautiful. If the second finger is conical, which, however, is seldom found, it indicates a mind that is frivolous; there is lack of earnestness and sense of responsibility. The person would be lazy also lacking in strength of character. When the third finger is conic it indicates fine power of intuition and an artistic sense of touch and feeling but the person lacks in executive abilities. A feeling of discontentment pervades the being. The fourth finger, when conic is also able to bestow intuitive faculties. It is so because both the third and the fourth fingers are connected with the passive part of the hand and are related to the area of the subconscious and imagination. They are also more connected with the sexual functions. The person with a conical little finger is witty and humourous,



tactful and diplomatic but with an inclination to lie, and at times with a mind to use the information gained in confidence and good faith, to his own advantage.

The conic tips are a bit difficult to distinguish in the beginning from the pointed ones but a little more practice renders the task easier. Generally the long fingers are found to be having pointed finger tips. When all the fingers are so pointed (Fig. 4), they indicate a most unpractical nature, dominated more by inspiration and idealism, the person almost living as it were in a dreamland. Life will be full of fancies, follies and foibles. When the first finger is pointed, it gives an exaggerated sense of idealism which has no practical basis or justification. When the second finger is pointed there is a sort of superstitious approach towards religion and fear rather than love of God. When the third finger is pointed, it is likely to create discontentment and frustration due to very high expectations from life and living. In the field of politics and in society, the views of a person with a pointed third finger are least acceptable. The pointed little finger is likely to make the person mischievous and he may go to any length to cause humour or to be witty but not with much success. The person may be eloquent if the finger is long, but he may turn out to be a bore if other signs are not favourable. Generally the pointed fingers are found in feeble minded persons and imbeciles, but they are seldom found in normal hands. The little finger when pointed might indicate abnormality of the ductless glands of the body, and is noticed in the hands of hypothyroid persons and those who are subject to infantilism.

In connection with the first finger, Prof. Wood Jones in the *Principles of Anatomy as seen in the Hand,* has observed that "In man alone is the index finger held aloof from its fellows", which fact is sufficient to indicate its importance among the fingers of the hand, as it is associated with the highest powers of the human mind. It represents in man the ideal creative spirit as opposed to the ideal self represented by the thumb. When the first finger is well developed, it gives a man power and capacity for helping other people. Crooked first finger mars such a desirable attribute and when stumpy, it also gives selfishness. When a joint of the finger is knotty and bulging (Fig. 5 A & B). it endows a person with ambition to gain knowledge, a deeply penetrating and probing mind and a scientific attitude. The person would be cautious and thoughtful with an enquiring disposition. When the first finger is stunted the person would not like to shoulder any sort of great responsibilities, and would be lacking in sense of honour and just pride.

The first finger in short is identified with sociability, ambition and religiousness. When it is bent below the others so that it stands back and not in level with the other fingers when the hand is extended and coupled with that if it is absolutely crooked, there will be neither honour, honesty, nor reverence in character. The person may not have the power to keep himself on the upright path. He may fall a prey to infamy, a victim of physical sexuality and take up to dishonest means.

When the lowest or the basal phalanx of the first finger immediately next to the palm is the longest it shows pride and love of domination. The person would be self-assertive to a fault, which may make him unpopular, as he may not care for the feelings of others. His vanity, pride and desire to impress all people at all times might prove the deathknell of the very things which he aims to achieve thereby. However, it has its good points and when strongest amongst the three phalanges it indicates the leader in the material world; as a politician or a soldier or as a man of trade, business, industry or commerce.

The second phalanx of the first finger stands for the world of thought and idealism and when long it indicates ambition for worldly progress and prosperity. The person would be a seeker after material security, well-being and a social elevation in life. The top or the nail phalanx is identified with the inspiration and prophetic faculties. If it is the longest it gives a deep religious sentiment. The person will be a keen seeker after truth, attaching great importance to justice, integrity and piety,

The middle or second finger though longest has fewer characteristics attached to it. When it is strong and outstanding it suggests seriousness and religious tendency. When otherwise formed it would suggest a superstitious nature or morbidity. When it is crooked the person though cautious will not be prudent and wise, and in worst of the cases may become a sneak. It betrays melancholy disposition, sadness and selfishness. When crooked second finger is found on a very stiff hand, it indicates a mutinous nature, harbouring hatred towards all human beings but particularly for the persons of the opposite sex. If the second crooked finger is longer because of the nail phalanx being longer than the other two phalanges, the person sooner or later gets tired of his life and living and may likely become insane provided there are such other indications on the palm. Summing up, it can be stated that a good proportionate and well formed Saturn or second finger is a necessity as it indicates sobriety, wisdom, resolution, economy, patience and perseverance.

The third finger stands for all that is brilliant, successful and charming in human nature. When strong and well formed proportionately it indicates a power of perception and a love of truth and beauty in form, colour or idea. But when the third finger is crooked, it shows great lack of sense of proportion and *savoir faire.* If such a crooked finger is long, the person will have love of speculation and of hazard and no liking for a work well done, because he lacks the desire for perfection. If the crooked third finger is short it may lead to vanity, stupidity and

extravagance. The person would be lax in his views and rude in his behaviour. He may be prone to gambling, avarice, greed and laziness.

The basal phalanx of the ring finger, meaning the one nearest the palm, if very thick shows a love of luxury in life and of sensuous beauty in art. The second phalanx if well formed indicates love of intellectual beauty in science or art. The nail phalanx indicates a love of ideal or of abstract beauty, coupled with a power of expressing it in music, painting or in poetry, provided the little finger is a bit longer and well formed.

When the little or the fourth finger is high and well set, it is suggestive of organising and executive abilities which may be profitably directed towards commercial channels. It is indicative of influence, activity, brilliance, and sufficient knowledge of human nature. When, however, the little finger is crooked, the person is prone to breed hatred and contempt even against the members of his own family and his kith and kin, and will not have a good word to say about any one, rather he may scheme to injure others, thereby lowering himself in the esteem of others and leading a blasphemous life. When the crooked little finger is long, it is a sign of chicanery, ruse, of recklessness in management. It indicates a person who greatly likes to meddle with other people's affairs. If the crooked fourth finger is short the person only becomes mischievous with no sense of good workmanship.

When the basal phalanx of the fourth finger is well set, it indicates good organising and executive abilities. If the second phalanx is longer than the other two phalanges, it indicates aptitude and final success in the realm of science. The well developed nail phalanx indicates inventive abilities. Needless to state that a longer finger is associated with eloquence and self-control, a power of expression in writing, painting and music. The finger stands for an inborn capacity for tact but when it is too short, it would be the other way round, and the person should do well in developing power of expression, overcoming shyness, coyishness, and learn to acquire a measure of self-control.

Two adjoining fingers at times appear as if they are glued or joined together. When that is the case, one can be sure that the person is mean and self-centred. When it is so between the second and the third finger, it betrays inability to rise above the circumstances and to go beyond one's station in life. The person would lack courage and a spirit of enterprise.

Knotty fingers (Fig. 5 A & B) present an analytical, reflective and thoughtful mind. They show methodical and well-planned work. Being critically disposed, the person is apt to be of a doubting nature. There is a constant apprehension of making a wrong decision.

Sometimes one or the other finger is seen inclined towards the other finger. Such an inclination or a sword-like curvature of the finger indicates a defensive mechanism of the mind. Such an inclination was termed "axation" by Pierre Abraham. Monsieur Henri Mangin interpretes such inclination as follows :

When one or the other finger is inclined towards the ring or the third finger it goes to show artistic tastes and aptitudes. When the inclination is towards the middle or the second finger, it is a sign of unconscious submission to exterior circumstances. Mixed inclination towards the ring or the third and the fourth finger would go to show a person who works laboriously and conscientiously. Inclination of the first three fingers towards the little or the fourth finger suggests intelligence and cleverness, but might also render a man cunning. If the second, third and the fourth fingers lean towards the first finger, it may suggest ambition and a practical sense of proportion and reasoning and a well-conditioned outlook towards life.

Certain small markings, lines and signs on each finger may be noted for what they are worth. A single line on the first finger shows nobility of character and great honours. A star on the first phalanx of the first finger indicates some favourable happening in the near future, it is not a lasting sign; if the said star either on the first or the second phalanx if surrounded by a circle, it is indicative of profligacy. A cross on the upper joint on the first finger is said to give literary success. Many transverse lines on the second and the third phalanges are supposed to show envious disposition. Upward branches rising from the line of life and going right up over the basal phalanx of the first finger is suggestive of riches. Much lined up second finger gives impulsiveness. Many vertical lines on the second finger, supported by certain criss-cross lines on the mount of Saturn are suggestive of succession of fatal happenings. A triangle on the second finger is sign of talent for occult sciences. A star formation on the second finger, especially on the first phalanx foreshows unfavourable fatality or casuality and even danger of assassination provided other lines and signs on the palm confirm the same.

A line from the root of the basal phalanx of the third finger to the joint of the first or the nail phalanx is a good sign as it indicates great fame, but if there be several lines cutting such a good line or lines, they go to indicate reverses due to women. A cross on any of the phalanges and especially on the nail phalanx is a desirable sign to have, particularly in case of women, as it shows chastity. One or two straight lines from the basal to the second phalanx of the third finger accompanied by a wide quadrangle on the palm give nobility of character, and in certain cases also talent, but a semi-circle on the basal phalanx is a sign of unhappiness. One clear line traversing the entire length of the fourth or the little finger gives veracity, and two clear vertical lines are capable of giving rectitude. Such vertical lines may confer success in scientific pursuits. Confused or criss-cross lines on the phalanges of the little finger are undesirable as they are a sure sign of untruthful disposition and deceitful nature. A cross is considered good as when placed on the nail phalanx, it indicates a celebate nature which is hard to find these days; however, star formation is unfortunate and if accompanied by supporting signs on the palm, it indicates a dishonourable death.

From a medical point of view the fingers are correlated to the organic system. Valuable information with regard to the study of fingers in relation to diseases is made available in the book entitled *Clinical Methods* by Sir Hutchison and Hunter. It would, therefore. not be out of place to make full use of such information for this article. In nerve disease the fingers might appear red or pallid and almost dead looking. In ulnar paralysis the fingers might get deformed due to over extension of the first phalanx with excessive flexion of the other phalanges forming a claw like appearance.

In achromagaly, the knuckles of the fingers are generally spatulate with square tips which get enlarged and the skin is thickened. Regarding the clubbing of the fingers the learned doctors observe "the tissues at the base of the nail are thickened, whilst the nail itself loses its longitudinal ridges and becomes convex from above down as well as from side to side. In extreme cases the terminal segment of the finger is bulbous like

the end of a drumstick. The condition may be seen in pulmonary tuberculosis, bronchietasis, empyema, subphrenic abscess, infective endocarditis and in certain forms of congenital heart disease ". It is also observed that the claw-hand occurs in some cases of progressive muscular atrophy. In some cases of osteoarthritis, there would be bony outgrowths called Heberdon's nodes on the fingers.

Strictly from the palmist's point of view, the thorax is associated with the index finger; the digestive system. the bony system and the organs of hearing are associated with the second finger, the arterial system, the cardiac renal system and the organs of sight are linked with the third finger and the gall bladder, the thyroid and gonadic functioning is correlated with the fourth finger, which if abnormally short or malformed would indicate insufficient thyroid and gonadic functioning and in case of women, ovarian functional deficiency.

Before bringing this article to an end, what Indian Palmistry has to say about the fingers may be noted. In Sanskrit the fingers are known by various names of which only a few may be mentioned here :

अङ्गुल्यः करशाखाः स्युरङ्गुल्यः करपल्लवा ।
त्रिपुराः करजाम्बाश्च मायाः
कर्मायुधामताः ॥

" Angulyaha, Karashakhaha, Syurangulyaha, Karpallva, Tripura, Karjamba, Maya and Kamadugdha, etc."

The names of the first or the index finger are as follows :

प्रदेशिनी तर्जनीस्याच्छात्रुड यागवेषिणी ।

" Pradesini, Jargini, Shatruda, Adhya and Gaveshini, etc." The second finger is known by the following names :

ज्येष्ठा तु मध्यमा मध्या लक्ष्मीः
सौभावभत्यपि ।

"Jeshtha, Madhyama, Madhya, Laxmi, Saubhagyavati, etc." The names of the third finger are as follows :

अनामिका च सावित्री गौरी
भगवति शिवा ।

" Anamika, Savitri, Gauri, Bhagawati and Shiva, etc." The little finger goes under the following names :

कनिष्ठान्त्या लघुस्तारा च काञ्चनी ।

" Kanishtha, Antya, Laghu, Tara, Kanchni, 'etc." Well-proportioned, straight fingers of regular form, soft long and rounded, with long phalanges are considered fortunate as would be evident from the following stanza and if formed otherwise would indicate poverty :

दीर्घनिर्मांसपर्वाणः सूक्ष्मादीर्घाः
सुकोमलाः ।
सुधनाः सरलवृत्ताः स्त्रीन्नरंगुलयःश्रिये ॥

The leaning or fingers with inclination and outward protuberances renders a person prone to danger from weapons and flat fingers compels a person to take up service. The sloka is as follows :

यच्छम्ति विरलाःशुष्काः स्थूलावक्रा-
दरिद्रताम् ।
शस्त्रघातो नहिर्निम्ना श्रेष्टत्वं
चिपिटाश्रताः ॥

Wide space between the fingers, when they are held together are considered unfavourable for accumulation of wealth. The following observation from Jain Samudrika may be noted.

शिलष्टान्याङ्गुलिमध्यानि द्रव्यसंचयहेतवे ।
तानि चेच्छिद्रयुक्तानि त्यागशीलयुतोनरः ॥

If there be space between the first and the second finger, when they are held together, it indicates lack of wealth during the first part of life, when that is the case between the second and the third finger, it refers to the middle part of life and when it is so between the third and the fourth finger, the reference is to the last part of life. The relevant sloka is as follows :

तर्जनीमध्यमारंध्रे मध्यमानामिकान्तरे ।
अनामिकाकनिष्टान्तः छिद्रे सति
यथाक्रमम् ।
जन्मतः प्रथमेशे वा द्वितीये च तृतीयके ।
भोजनावसरे दुःखं केयाहुः श्रीमतामपि ॥

The same point is stressed the other way round in Jain Samudrika which is as follows :

नालतणंमि जाणसुतड्डणि आमड्डिमत्तर
धणंम्मि ।
अछिद्रे सुपणेसुपव्वेसु सथा सुशीशे
पावश्पच्छासुशं कणिद्वियाणामियंतरधणम्मि।
अछिदेसु धणेसुय पव्वेसु सयासुशीशेर्श ॥

As to the length of the fingers it is stated that if the little finger extends above the base of the top or the nail phalanx of the third finger, it increases or adds to the wealth of a person and he is likely to have more maternal relatives such as uncles and aunts. The sloka as is follows :

अनामिकान्त्यरेखायाः कनिष्ठा
स्याद्यदाधिका ।
धनवृद्धिस्तदा पुंसां मातृपक्षोबहुस्तथा ॥

Similarly if the first finger is longer than the third or the ring finger the paternal relative such as uncles and aunts would be more and is an happy augury.

मध्यमाप्रान्तरेखाया अधिका यदि तर्जनी ।
प्रचुरस्तु पितुः पक्षः श्रियश्च
विपदोन्यथा ॥

To have more than five fingers is deemed unfortunate and indicative of short life. If the second finger is doubly formed they unfavourably affect wife's longevity. If the third finger is doubly formed, the person fully exploits the knowledge acquired by him for his material and other worldly gains and possessions.

मध्यमायां तु दीर्घायां भार्या-
शनिर्विनिर्दिशेत् ।
अनामिकायां दीर्घायां विद्याभोगी
भवेन्नरः ॥

It may be, therefore, concluded that the study of the fingers in general is as important, vital and significant as the study of the lines on the palm. Among the fingers again each finger merits special consideration. It may be recapitulated and summed up in the words of M. Mangin that the index finger shows mental expression and determination of social personality, the second finger is the indicator of the secret mentality of introspective thought and the inner personality, the third finger typifies the expansions of idealism and the inner aspirations and inspirations and the fourth finger shows the degree of mental receptivity and modalities attached to it. Let it be therefore said at the end that " as the fingers so is the man ".

MANAGER,
The Astrological Magazine

INDISPENSABLE BOOKS

ASTROLOGY

Pre-Natal Astrology.—By F. C. Dutt. Deals with birth rectification. Rs. 3.50 or sh. 7.

Highlights of Indian Astrology.—By M. K. Wali, Bar-at-Law. Deals critically with almost all aspects of astrology, detailing also valuable material on timing events, hitherto unpublished. Rs. 3.50 or Sh.7.

Tables of Diurnal Planetary Motion.—Enables the ready determination of the proportional of motion of any celestial body in longitude or right ascension for every minute of the day. Rs. 12.

Longitudes and Latitudes throughout the World. (Except the United States).—By Eugene Dernay. With Local Mean Time Variations from Standard Time and G.M.T. This remarkable work includes more than 5000 cities and towns in every part of the world. Most essential for all students of astrology. Rs. 12.

Indian Ephemeris for 1958.—By N. C. Lahiri, M.A. Indispensable to all. Rs. 2.50 or Sh. 5.

Experiments with Horoscopes, Vols. I, II and III.—By Hora Ratna R. G. Sapre. An analytical study of horoscopes based on scientific principles according to Western and Eastern Systems. Rs. 5 or Sh. 10 each.

Indian Astrology and Diseases.—By Parimal Purkayastha. Rs. 5.50 or Sh. 11.

Indian Astrology, Sex, Marriage and Children.—By Parimal Purkayastha. Rs. 6 or Sh. 12.

Condensed Ephemeris, Parts I, II and III.—By N. C. Lahiri. (Part I : 1875 to 1900, Part II : 1900 to 1941 and Part III : 1941 to 1951), in all Rs. 12 or Sh. 24.

Rhythm of Life.—By F. C. Dutt. Rs. 4.50 or Sh. 9.

How to Compare Horoscopes.—By S. Rajagopala Iyer. Rs. 3.87 or Sh. 8.

Directions in New Era Astrology.—By S. Rajagopala Iyer. Rs. 12.87 or Sh. 26.

Table of Saptavargas.—By R. N. Ramasubban. Rs. 1.12 or Sh. 2/6.

Bharathiya Ephemeris.—From 1960 to 1970.—By Pandit Ganga Prasad. Rs. 10.50 or Sh. 21.

Nadi Jyotisha, Parts I, II and III.—By R. Gopalakrishna Rao. Rs. 8 or Sh. 16.

Jataka Satyacharya.—By C. G. Rajan. Rs. 6 Sh. 12.

Raja Jyothirganitham.—By C. G. Rajan. Rs. 9 or Sh. 18.

Astrological Tables of Lagna and other Houses (in Bhavas).—Rs. 2 or Sh. 4.

Tables of Ascendants.—By N. C. Lahiri, M.A. Rs. 4.50 or Sh. 9.

Bhrigu Samhita Paddhati.—By Bhagawandas Mital, Rs. 12 or Sh. 24.

Predictive Astrology.—By Dr. Jagannatha Rao, M.B.B.S. Rs. 2.50 or Sh. 5.

ASTRONOMY

Tables of the Sun.—By N. C. Lahiri. The book serves the purpose of computors of Indian almanacs. Rs. 7 or Sh. 14.

Concise General Astronomy.—By O. R. Walkey and Dr. H. Subramanya Iyer. Highly recommended for general study. Rs. 6 or Sh. 12.

Universe and the Heavens.—By M.V. Ramakrishnan, M.A., L.T. Gives in simple non-technical language all that is known at the present day about the heavenly bodies. Ancient astronomy has been correlated with modern observations. Rs. 5.25 or Sh. 10-6.

PALMISTRY

Astro Palmistry.—By F. C. Dutt. Rs. 7.50 or Sh. 15.

NUMEROLOGY

A Treatise on Predictive Numerology.—By B. J. Rao, Rs. 4.50 or Sh. 9.

MARKET FORECASTING

Planetary Influences on Markets.—By Legan Mars. Rs. 7.50 or Sh.15.

Market Forecasting.—By F. C. Dutt. Rs. 10.50 or Sh. 21.

Perpetual Market Forecast and Business Astrology.—By Pandit Ganga Prasad. Rs. 10.50 or Sh. 21.

You, Business and Speculation —By Bh. Satyanarayana Rao. Rs. 21 or Sh. 42.

Self-Instruction in Commercial Astrology and Numerology.—By T. G. Butaney. Rs. 15 or Sh. 30.

How to Forecast Prices and Winners in Races.—By T. G. Butaney. Rs. 15 or Sh. 30.

RACING ASTROLOGY

Arc of Fortune.—By Erick Leski. Rs. 10 or Sh. 20.

X-Raying Winners.—By Dr. Bh. Satyanarayana Rao. Rs. 15 or Sh. 30.

The Cult of the Atom

BY V. VENKATARAMANA RAO, B.A., B.L.

"THE world of atoms constructed by Democritus merely as a speculative philosophical hypothesis has been shown by modern physics to be a reality. In the last few decades the human senses broadened, refined and sharpened by suitable methods of investigation and more elaborate apparatus, have been able to pursue this bold philosophical idea into realms hitherto undreamt of."—(The World of Atoms: Arthur Hass).

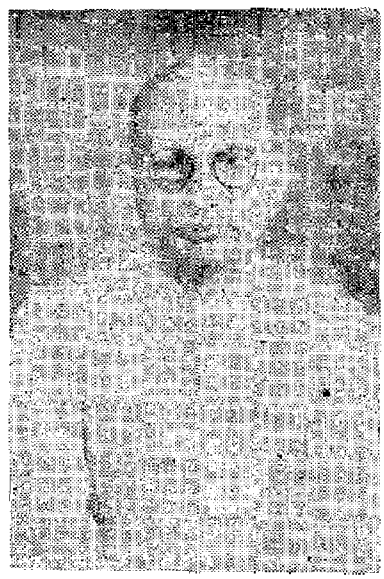
Dalton discovered that there are just as many species of atoms as there are elements; that the atoms of a given element always have a quite definite mass; and that the chemical compounds are formed by atoms of different kinds uniting in the simplest numerical proportions as small groups—the so-called molecules. Dufay discovered the dualism of electricity—the existence of two opposite electrical states, the positive and negative.

Every substance is built up of atoms, all of one kind or a linked arrangement of several kinds. Every atom has the same structure. There is a nucleus at its centre. The heavy particles (the proton and the neutron) in the atom are concentrated in this. The light electrons are in the outer boundary. The electrons are in constant movement around the nucleus just as the planets circle around the Sun. But their orbits are less precise than those of the planets.

The atom of hydrogen has only one proton for its nucleus; and to balance its electric charge one electron circles around it. The atom of helium has a nucleus of two protons and two neutrons bound together. Their electric charge is balanced by two electrons circling around the nucleus.

The structure of the atom is held together by mighty invisible forces. Atomic energy is nuclear energy which is released when the atom is subjected to heavy bombardment. The loss of mass exactly balances the energy released. The constituent thus separated is known as the positive electron or positron. It has the same positive charge as the proton and its mass almost equal to that of a negative electron. They seem to be created by the intense bombardment and have only "a transitory existence outside the atom." Sir James Jeans says that "whatever primary qualities matter may possess, permanence in time, uncreatability and indestructability, must no longer figure in the list. Matter seems to have lost the permanence which both physicists and philosophers used to attribute to it."

The splitting of the atom is a marvellous achievement. The greatest consideration is "the ultimate value to man that may come of unlimited power from the reservoirs of atomic energy." We have seen the diabolic use of the atom bomb in World War II against two great cities of Japan, Nagasaki and Hiroshima. Sir Herbert Barker wrote some years ago that "modern civilization is suffering



V. VENKATARAMANA RAO

from a spirit lag. And hence every potential blessing from science becomes a potential curse". But the harnessed atom could redeem the world from want and transform our earth into a world without poverty".

The machines have failed to give peace and contentment to the toiling masses. It created a mass of unemployed men and women resorting to strikes off and on paralysing the industries and other essential services. There is no equitable distribution of wealth. The defect is not economic; it is ethical. The need of today is a speeding up of our spiritual lives. The salvation of the earth consists in the just and proper use of the atomic energy.

The scientific knowledge about the atom has been utilized for various purposes. The photo electric cells, and the cathode ray gave us the modern sound movies and the television pictures. The alchemist's dream is also partly realized. Mercury can be transformed into gold through an expensive process. The radar is used in air navigation. The Geiger counter has become the eye of research, which picks up and traces the movement of radio-active atoms moment by moment. The atomic power has been used for the submarine—Nautilus—which completed successfully a submerged passage beneath the North Pole.

The scientists are using the atomic energy for the exploration of the outer space. The Soviet Union launched its Sputnik 1 into orbit 560 miles up on Oct. 4, 1957. Then a second sputnik reached a height of 1,062 miles. On January 31, 1958, a third satellite was launched by the United States. The American satellite—the Explorer—reached 1,587 miles above the earth. This explorer and the second Russian satellite are now circling the earth at a speed of 18,000 miles an hour gathering information about the upper atmosphere and transmitting it to earth by radio. The sputniks thus supply valuable information to IGY scientists throughout the world. Space technology affords fresh opportunities for scientific observation and experiment. It will add to our knowledge and understanding of the earth, the solar system and the universe.

The Astronomical Council of the Soviet Academy of Science intends to equip the sputnik in future with devices of light reflecting or emitting light during the nights. It will be like a little moon shining in the nightly skies. So one might well sing:—

Twinkle, twinkle, little sputnik,
Singing unto human glory;
Deride not our moon or mimic
Lest thine short life mar thy story.

Arthur H. Snell, director of the physics division of the Oak Ridge National Laboratory, writing in the American Scientist (January 1957) observes that "unsuspected new particles are being found and new properties of old ones, with a rapidity that has pushed experimentation far ahead of theory; and physicists are

faced with a complicated state of affairs that invokes a sense of frustration. *Their experience and instincts tell them that there must be some organisation underlying the empirical situation.* The Dirac theory of electrons introduced the concept of anti-particles. The pair theory of particles is now confirmed by experiment and generalisation. Mr. Snell states that "it is now legitimate to speculate about atoms with negative nuclei and positive electrons; the contra-terrane matter of science fiction has come into its own and astro-physicists are on the look out for such matter in the cosmos.

To understand the world of matter (prakriti) and the spirit (or Purusha) has been the time-honoured struggle of the philosopher. Sri Sankara, Sri Madhwachar and Sri Ramanuja interpreted this dualism in their own way. The dawn of nuclear age throws fresh light on this much perplexing question. In Indian philosophy religion is looked upon as affording the hope that Brahman—the Ultimate Reality—is realizable by all

Kaka Bhujandar deals with this question in his treatise—*Atom*—The Briktha Rahita Taraka Raja Yoga which he expounds in his nadi offers a new key to the understanding of this question. His opinion is in agreement with the *Visishtadvaitam* theory as propounded by Sri Ramanuja. The relevant verses are given in the Appendix. Kakayar says that introspection reveals the secret of creation. An eternal physical life is necessary to attain real Mukti. This fact will be realized by many. The advaitam cannot prevail any longer. The yoga pathi reveals this truth in the *Sarangam*; that he and the other (soul) are one, the two in one. The perception of *Jyoti* is evidence of the Vishistadvaitam.

Bhujandar further states that the splitting of the atom very minutely leads to the Paramanu stage, where it cannot be subjected into further splitting. It is the innermost core of the atom where its essence or prime quality can be realized. It is the Spirit Absolute or Purusha, embedded in the matter.

We have seen that the scientist armed with the most powerful atom-smashing machines attempts to solve the mystery of the universe. "He proceeds from the circumference to the centre and as veil after veil disappears he discovers that the apparently stationary is eternally mobile." The solid world dissolves bit by bit under his very eyes, and then vanishes—first into ether, then nto electricity, then into energy or force. As the last veil goes, he perceives that the force is Absolute, and that Absolute Force is the one great cause of all. And as the last cloud dissolves he finds himself in the unclouded presence of the Divine Glory."

Alice A. Bailey in her book entitled "The Consciousness of the Atom" gives an esoteric significance to the atom. She names four kinds of atoms: The atom of the chemist and the physicist, the human atom, the planetary atom, and the solar atom. The concept of an atom according to her is 'a life working intelligently through the medium of a form.' "Man is equally a life or centre of energy, manifesting through his bodies. So a planet is also a medium of expression of a still greater centre of energy. And further under the law of analogy, it may perhaps be proven at some distant time that there is a God or central life back of material nature, and an entity who functions consciously through the solar system."

Robert Browning echoes the same idea in his "*Paracelsus*":—

"Thus He (God) dwells in all
To man—the consummation of this scheme
Of being, the completion of this sphere
Of life, whose attributes had here and there
Been scattered o'er the visible world before,
Asking to be combined, dim fragments meant
To be united in some wondrous whole,
Imperfect qualities throughout creation,
Suggesting some one creature yet to make,
Some point where all those scattered rays should meet,
Convergent in the faculties of man."

Thus we see that the splitting of the atom by the scientist or the inward discernment of it by the philosopher both lead to one fundamental Truth. All matter is electrical energy—the Brahma Jyoti pervading the whole world of matter. The duality (Matter and Spirit or Prakriti and Purusha) is perceived only in the natural state of existence. But in the final analysis the dualism resolves and coalesces into the One Absolute, while yet the soul consciously maintains its individuality. This is the Vishistadvaitic view of Sri Ramanuja. The atom is the borderland of science and philosophy. Both teach that there are tremendous forces concealed in nature and man. To tap them carefully and use them profitably leads to the harmonious and natural life of human beings and brings them in tune with the Infinite Consciousness, the Divine Light. Bhujandar also says that by the control of atom alone harmony could be established in the world. (*Anu Vade Vasya Maakhi Seelam Saiyya*).

GERENTOLOGY AND AYURVEDA

(Continued from page 32)

to Kuti Kalpa in rejuvenating the system. Special medicines (herbal, etc.), prescribed according to the case-history of the patient are first administered to the goat. From the very first day the patient starts taking the goat's milk. The total quantity of milk yielded by the goat during the day must be taken by the patient. He can take his normal diet, though, ordinarily, milk, rice, nuts and fruits constitute the best food (except in cases of rheumatism, diabetis and paralysis). Food should be nutritious. The patient should move about, attend to his normal duties, but should not overstrain himself. The treatment has been used successfully in the cure of a variety of ills.

There are also other Kalpas, like the Bodhi Kalpa (for increasing mental vigour and memory power), the Hari Kalpa (for cure of deafness, etc.), the Ananda Kalpa (for premature grey hair), the Vishnu Kalpa (a cure—all from rare herbs and so on). Constant research is being conducted at the Kaya Kalpa Kanan, Ghaziabad, in Uttar Pradesh, for evolving more and more efficacious specifics.

Ambiguous Terms in Hindu Astrology

BY JYOTISH KALANIDHI PT. GOPESH KUMAR OJHA, M.A., LL.B.

STUDENTS of Law are well aware that two different and independent schools of Hindu Law have developed on account of the two different interpretations of the word पितरौ 'Pitarau' (parents) occurring in the Yagnavalkya smriti* in the context of laying down the order of succession to the property of the deceased. While one commentator Vijnaneshwar of Banaras, interpreted the word 'parent' as meaning the 'mother and the father' and put mother first on the etymological ground माता च पिता च पितरौ (mother and father), and on grounds of consanguinity, the other commentator of Bengal interpreted the word 'parent' as 'father and mother' and put father first because he had the preferential right of performing obsequies and offering oblation to the Manes. The former school known as 'Mitakshara Law' is prevalent in Bihar, U.P., Rajasthan, Punjab, Madhya Pradesh, etc. while the other Dayabhag school of Hindu Law holds sway in Bengal.

I will not go into the complexities of legal subtelties, which the above two schools have given rise to, and how inheritances have been decided according to the one school or the other, because that is not the principal point for discussion in this article. Nor shall I refer to the various schools of (*i*) Advaita, (*ii*) Dwaitadvaita and (*iii*) Visishtadvaita † which have been built on the same foundation, but with diversity of edifices on the same texts, but differing in the interpretation thereof.

Variety of interpretations, where it has only academic, religious or philosophical significance does not interfere in the achievement of mathematical results, but differences in the interpretation of astrological texts have an important and direct bearing upon the predictive side and I am going to present in the following lines—how different schools of Hindu Astrology have sprung up, on account of ambiguity of Sanskrit terminology.

---

* "पत्नी दुहितरश्चैव पितरौ भ्रातरस्तथा"

†(*i*) Oneness of conception in the matter of human soul and God, (*ii*) Dual conception resolving it into oneness, (*iii*) Human soul as devotee of God.

Manda

To begin with, I shall take the word 'Manda' occurring in 2-1-5 in *Jaimini Sutras*. The word means (*i*) Lagna (Ascendant) as well as (*ii*) Sani (Saturn). Jaimini has laid down earlier that the Rasis/Bhavas would be referred to in the text according to the कटपयादि nomenclature, but the 'Grahas' (planets) would be referred to directly by name. According to "Katapayadi" nomenclature 'Manda' means '1', so the school of astrologers who interpret it as meaning 'Ascendant' are quite justified in interpreting 'Manda' as 'Lagna' (rising sign). But according to the other school, Manda means the 'slow' one, and since out of the nine planets in Hindu Astrology, Saturn is the slowest planet, there is no doubt that 'Manda' means 'Sani'.

The southern Indian school of Hindu astrologers favours the meaning of 'Manda' as 'Lagna' (Ascendant). In this connection reference may be made to (i) *Jaimini Sutras* by Sri B. Suryanarain Rao (1949 Edn.), page 126. (ii) *Studies in Jaimini Astrology* by Prof. B. V. Raman, page 103 (1950 Edn.) (iii) *Span of Life* by Sri G. Ramamurthi (page 80). The above list of authors is only illustrative and not exhaustive. They have no doubt walked into the steps of older masters and rely upon tradition and a number of old Sanskrit commentaries. Nilakantha and many other eminent scholars have written elaborate commentaries on *Jaimini Sutras* in past centuries. Nilakantha the celebrated Indian astrologer also interpreted 'Manda' as Ascendant. But Krishnanand Saraswati Swami another gigantic scholar of astrological erudition has interpreted 'Manda' as 'Sani'. Even the Sage Parasara, who probably represents a school older to Jaimini's says:

"लग्नेशादष्टमेषाच्चैको, योगः
कथितो द्विज।
होरालग्नाभ्यां द्वितीयं, योगमेवं
विचिन्तयेत् ॥
तृतीयं शनिचन्द्राभ्यां, चिन्तनीयं
द्विजोत्तम।
लग्ने चन्द्रः सप्तमे वा, चिन्तये
लग्नचन्द्रतः ॥"

Here Sani (Saturn) has been accepted as the factor. Only when the Moon be posited in 1st or 7th house the determining factors may be Ascendant and Moon instead of Saturn and Moon. (See Jaimini Padyamrit—Sanskrit commentary on Jaimini, page 64). The following commentaries also interpret Manda as Sani and not as lagna: (i) *Jyotirvivekratnakar* by L.P. Pathak (page 276). (ii) *Jaimini Sutram* by late Pandit Ramyatna Ojha, Head of the Oriental Astrological Department, Banaras Hindu University (pages 93-94). (iii) *Jaimini Sutras* by Sitaram Jyotishacharya (page 59). Scholars can well imagine how much difference it will make in arriving at mathematical results, when two equally current interpretations are in vogue.

Hora

Another ambiguous word which has given rise to two interpretations—having a serious bearing on the calculation of Hora Lagna (which is also made use of in determination of longevity) is the word 'Hora'.

(i) It means one 'hour' and many scholars are of the view that the words 'hora' and 'hour' have common origin.

(ii) The other well known meaning of Hora is half of a sign and the extended meaning is half of the sign rising (Ascendant).

Prof. B.V. Raman says: "Divide the time of birth in ghatis (from sunrise) by 2.5. The quotient plus one counted from the Sun or Lagna according as the Janma Lagna is odd or even represents the Hora Lagna. The remainder reduced to degrees, gives the exact longitude of Hora Lagna".

In the Jaiminian calculation of "Hora Lagna" not only Prof. Raman but other eminent scholars like Mahamahopadhyaya Pt. Durga Prasad Dwivedi have also taken 'Hora' as equal to one hour (*i.e.* 2.5 ghatis) but there is another school which interprets 'Hora' as half of the sign. In this context I need not refer to other works because the other interpretation has also been given by Sri B.V. Raman himself in his footnote in *Studies in Jaimini Astrology* on page 31 wherein says thus: ".....Hence mathematically the exact position of Hora Lagna would be 43° 9′ plus 174° which is equal to 217° 9′—Scorpio 7° 9′. Actually, however, as we are

asked to count from the sign of Lagna (*i.e.*, from the 1st degree of the Lagna Rasi) we get 30 plus 173/204°, *i.e.*, Thula 24°."

I would not dilate upon this point further but would state that there is another school which insists that the number of 'Horas' should always be added to the longitude of the Sun and not to Lagna whether the sign rising is odd or even. (See commentary on *Laghu Parasari* by G. P. Dwivedi, Head of the Astrological Department, Sanskrit College, Jaipur.) This difference in the matter of calculation of lord of Hora would also arise in the "Shadbala" (six kinds of strength) calculation. Please refer to Pt. Subrahmanya Sastri's commentary on *Sripati Paddhati* (Pp. 43) where following *Muhoorta Martanda* he deducts the longitude of the Sun from the longitude of the Lagna, to arrive at Hora and concludes that the 'Hora' is presided over by the Moon. But in the example given by him if we arrive on the basis of $2\frac{1}{2}$ ghatikas (*i.e* one hora=one hour), the 'Hora' at 30 ghatikas on Friday would be quite different.

Pandit Subrahmanya Sastri himself writes on page 42 of his *Sripati Paddhati*: "The word 'Hora' means an hour, *i.e.*, 1/24th part of a day as well as 'half of a Rasi.' Some take it *in the former sense and others in the latter*....."

In the example horoscope worked out by Mr. Sastri, he has taken one interpretation relying upon the authority of *Muhoorta Martanda* which represents one school while the other school is relied upon by Prof. B.V. Raman and a host of others (see *Graha and Bhava Balas*, pages 47-48 by B.V. Raman).

In fact the two schools have sprung up due to ambiguity of Sanskrit terminology. Students of Astrology would appreciate that as 'Hora' lord is assigned one Rupa of strength two different interpretations of the word "Hora" can heavily tilt the scale, one way or the other.

Gulika and Mandi

Almost all the Sanskrit astrologers have not made any distinction between *Gulika* and *Mandi*. Even in such an old standard work as *Prashnamarga*, Gulika and Mandi have been taken to be the same. It is only *Uttarakalamrita* which says that Gulika and Mandi are the two sons of Saturn (see Khanda—Part I, verses 7 and 8) and that according to Sage Mandavya they cause damage to the house they are posited in. Commenting upon the distinction between Mandi and Gulika Sri Subrahmanya Sastri says: "The distinction between Mandi and Gulika should be carefully noted. Their exact positions on any week day are not the same. Take for instance a Saturday. Supposing that the length of the day to be 30 ghatikas we have Mandi's position to correspond with the Lagna at 2 ghatikas after sunrise while Gulika's position will correspond to the Lagna at $33\frac{3}{4}$ ghatikas after sunrise."

With due deference to Sri Sastri, I do not agree with his version. But I would not like to dilate on the reasons for my disagreement. I would only add that not only 'Gulika' and 'Mandi' have been taken to be two *different* 'Upagrahas' (sensitive points) but even in the matter of calculation of the exact position of Mandi—there are two views: One view says thus :—

"Here we have to learn what is meant by Gulika Kala and the time governed by him..... Take Sunday and suppose the duration of the day is 30 ghatis, then each part gets $3\frac{3}{4}$ ghatis. This first $3\frac{3}{4}$ ghatis are governed by Surya (Sun), the second $3\frac{3}{4}$ ghatis by Chandra (Moon). The seventh $3\frac{3}{4}$ ghatis are ruled by Sani (Saturn). The eighth $3\frac{3}{4}$ ghatis have no lord and Gulika who is next to Sani (Saturn) becomes the lord. These $3\frac{3}{4}$ ghaties are called Gulika Kala (pages 53–54 *Jaimini Sutra* by Sri B. Suryanarain Rao.)

But according to *Vriddha Karika*, the oldest Sanskrit interpretation of Jaimini—

रविवारादि शन्यन्तं गुलिकादि
निरूप्यते ।
दिवसं अष्टधा भक्त्वा वारेशात्
गणयेत् क्रमात्
अष्टमांशो निरीशः स्याद् शन्यंशः
गुलिकः स्मृतः ॥

This means that Saturn's part of a day is Gulika. Even Sri B. Suryanarain Rao himself says: "When there are differences of opinion on such matters among the old writers, we have to look to the opinion of the best among them....." I may add that in matters like these, it is very difficult to say what is the best—the majority view however is that Sani's position is Gulika. I know that *majority* and *minority* have no significance in the matter of astrological interpretation, because one wiseman may well excel hundred fools. The difficulty however arises when there are all the 100 wisemen—50 holding one view and 50 the other.

Counting clockwise or Anti-clockwise

Before concluding with different schools of Jaminian terminology (which is open to more than one interpretation) I would like to cite one more instance. In Adhyaya 1, Pada 1 in Sutras 26, 27 and 28 Jaimini reads as hereunder:

प्राचीवृत्तिर्विषमेषु १.१.१६ परा-
वृत्योत्तरेषु १.१.२७ न क्वचित् १.१.२८

We have to remember that these sutras (aphorisms) occur in the very opening pada and the opening chapter is generally devoted to definitions and general rules.

Prof. B. Suryanarain Rao has translated the above thus:

"In all odd signs the counting must be in the right direction. 1-1-25. In even signs the counting must be in the reverse order. 1-1-26. In some places or signs this does not apply. 1-1-27 (pages 26–27). It has been further exemplified that the last aphorism—in some places or signs this does not apply—refers to the 4 signs Leo and Aquarius (among odd) and Taurus and Scorpio (among even.)"

I only want to invite attention of the readers to the fact that these two methods of counting clockwise and anti-clockwise are:

(i) Applied by some only in the matter of calculation of Chara Dasa (one kind of major periods).

(ii) While others extend this mode of counting to the *entire* Jaiminian system. For example in Adhyaya 2, Pada 1, Sutras 19, 20 and 21

"पितृलाभेश रोगेशप्रणिनि कंटकादिस्थे
स्वतश्चैवं त्रिधा...."

mean that we have to take the lord of the 8th as counted from the 1st and 7th houses and see which is stronger and where he is posited (in judgment of longevity). Now normally the eighth from 1st house is 8th and eighth from the 7th house is 2nd, but in case of an even sign (being the ascendant) excepting Taurus and Scorpio, if we count in reverse order eighth from 1st house (*via* 12th, 11th, 10th and so on) will be the 6th house of the nativity and 8th from the seventh (*via* 6th, 5th, 4th and so on, houses of the nativity) would be the 12th house in the birth chart.

Thus the lords of 6th and 12th would be quite different from the lords of 1st and 8th in any nativity and the entire data for

calculating the longevity would be bifurcated according as we count clockwise or anti-clockwise, in the application of aphorism in subsequent Adhyayas. Nor can we say that rules of Adhyaya 1 will be limited to Adhyaya 1 only. The general principal clauses have to be applied here as well as in subsequent chapters. In fact they have to be applied everywhere for aphorisms pertaining to strength of Rasi (sign) given in the opening chapter we apply in judgment of longevity in subsequent chapters. For people who are more interested in the above difference in interpretation, I would refer to pages 102–103 of the translation of Jaimini by late Pt. Ramyatna Ojha. I would have liked to give more instances from Jaimini—even from Adhyayas 3 and 4—English translation by Sri S. K. Kar. For the benefit of those who would be satisfied with the bare text of Adhyayas 3 and 4, I would refer to the *Jaimini Sutras* published by Lakshmi Venkateshwar Press, Bombay. This book was published in 1900 A.D. and contains all the four padas (including 3 and 4 which have now been translated by Mr. Kar). Space however does not permit me to offer more examples from Jaimini and I shall now switch on to Parasara.

Bhavas and Rasis

It has been one of the most controversial points whether in the absence of clear instructions (*a*) one should count Bhava (house) to Bhava, or (*b*) Rasi (sign) to Rasi. In view of the fact that in places near the equator, the two become almost identical, a number of Sanskrit works has left the matter to dual interpretation. I had in the course of an article (published in THE ASTROLOGICAL MAGAZINE) showed that equal division of houses was more favoured by early authors on Hindu Astrology. I am quoting herewith a Sanskrit authority to show that even in the matter of determination of temporal friendship and enmity—which is supposed to be a calculation of a very elementary character—there are two schools. One school takes only those planets as friends which are in 2nd, 3rd, 4th, 10th, 11th and 12th *Bhavas* while the other would take those as friends who are in the 2nd, 3rd, 4th, 10th, 11th, 12th Rasis as counted from the sign—the planet (whose friends and enemies we are to determine) is posited in.

The author of *Shambhu Hora-Prakasa* says :—

"मैत्रीचक्रं भावतः कैश्चिदुक्तं
नैतच्छ्रौ पत्या दिकानां मतं हि ।
लग्ने नैसर्गाद्यया स्थान संस्थैः खेटैः
मैत्री योगपूर्वं विचिन्त्यम् ॥"

Mr. V S. Subrahmanya Sastri who in the context of determining temporal friends and enemies says : "This latter kind of friendship between the several planets can be determined by finding out their relative positions, *i.e.*, by ascertaining *according to some* which of the 12 bhavas they occupy in the Bhava Chakra(Lagna-Bhava Kundali). Others say that the relative position of one planet with respect to another must be determined by first casting the Bhava-Kundali of the *latter planet* (by considering the latter planet as the Lagna).....and then finding which particular bhava in this Bhava-Chakra the former planet is occupying."

So even in the determination of temporal friendship and enmity by *Bhavas* (houses) we have 2 views: One school says : "Consider the Bhavas (houses) as calculated for the ascendant (houses of theNativity)".Another says : "No, consider the planet—whose friends and enemies you are determining as the "cusp" and make a fresh house-chart for each planet." It is a queer admixture indeed that in the determination of (*a*) Naisargika (natural) friendship we should take the *Rasis* (signs) as the basis and in (*b*) temporal we should take * Bhavas (houses of the Nativity), or Bhavas (houses by taking the individual planet as the cusp) and then combine (*a*) and (*b*) to arrive at resultant friendship, neutrality or enmity ! ! !

We have to remember that the resultant friendship, etc. is the basis of calculation of the mathematical *Shadbala* (six kinds of strength including the positional strength which in its turn depends upon the *Saptavarga Bala.*)

The mathematical results arrived at by the three different schools of Hindu Astrology would naturally differ.

Bhavas and Rasis in Gochara and Ashtakavarga

The entire transit system in Hindu Astrology is based on planetary movements as counted from sign to sign. I could quote extensively from *Vidhya Madhava* and *Muhurtha Chintamani* including the most valuable Sanskrit commentary *Piyusha-Dhara* to show that in the chapter devoted to *gochara* (transits) the computation is on the basis of the sign occupied by the Natal Moon. When Hindu astrologers have wanted to be more precise or have cared to apply more specific rules, they have taken the nakshatra or 4/9th of a sign, as a sector and there is a vast literature existing on birth nakshatra in which the Moon was posited at birth and they count not only birth nakshatra—Janma, but 'Karma and Adhana' and other nakshatras also and have even gone into laying down the Sarvato-Bhadra Chakra which is an almost independent branch of astrological science. But in the matter of *gochara* calculations, bhavas have been given little importance. There is however a school of scholars who say that *gochara* should be considered according to the Bhava (house) and *not* Rasi.

In their recent book *Ashtakavarga* Sri C. L. Patel and Sri Iyer have devoted their entire energy to preparing the case of Bhavas *vs.* Rasis. I have grave doub s how far the case can stand, but even in the consideration of Ashtakavarga, the determination of bhava can be split into two schools as shown above (in the context of determination of temporal friendship). For example in the Sun's Ashtakavarga, if we have to plot a *bindu* (favourable point) in 4th from the Sun whether it should be in 4th.

(*i*) Rasi (sign) as counted from the Rasi occupied by the Sun ;

(*ii*) Bhava (house) as counted from the Bhava (house) in which the Sun is posited in the *nativity* ; or

(*iii*) "Bhava" as counted from the Bhava(house)chart prepared by taking the Sun as the cusp.

Due to the ambiguity of the Sanskrit terminology each of the interpretators can find support for his view.

Another Interpretation in Ashtakavarga

Another bone of contention in the matter of interpretation has been the text :—

त्रिकोणेषु तु यन्यूनं तत्तुल्यं त्रिषु शोधयेत् ।

Scholars of astrology well-versed in Ashtakavarga system are aware, that after computation of Ashtakavarga, there is *Trikona-sodhan.* The 12 signs are divided into the following four groups :—

(*i*) Aries, Leo, Sagittarius ;

(*ii*) Taurus, Virgo, Capricorn ;

(iii) Gemini, Libra, Aquarius ;

(iv) Cancer, Scorpio, Pisces ;

and the above Sanskrit text has been interpreted in the following two manners :

(*A*) In the Trikona (three signs of one group as stated above) see which contains minimum number, and reduce that number from the other two

or

(*B*) In the Trikona (each of the

* See B.V. Raman's *Graha and Bhava Balas.*

three signs of one group as stated above) note the number which is the least, and reduce the number in the others—making them equal in all the three signs.

Example:

Suppose the position is as follows:—

Aries	3 benefic dots.
Leo	5 do
Sagittarius	7 do

Now according to school '*A*' 3 is the least number and must be deducted from each of the three signs and the position after reduction would be as follows:—

Aries 0; Leo 2; Sagittarius 4; while according to school '*B*' because 3 is the least number, the number in the other two must also be made equivalent to 3. So the position after reduction will be as follows:—

Aries 3; Leo 3; Sagittarius 3. One view is held by Balabhadra who is also the author of *Hayan Ratna*. This Balabhadra was the court astrologer of Shah Shuja (brother of Aurangzeb) in the 17th century. My purpose is not to show merits or demerits of any school, but only point out the existence of different schools of Hindu Astrology due to different interpretations—the beauty being that every school depends upon lexicon and rules of grammar of Sanskrit. In fact it is the ambiguity or richness of interpretation which is responsible for the flexibility of the language and diversity of interpretations.

'Varsha' (Year)

Another bone of contention in the calculation of *Mahadasas* and *Antardasas* has been the word वर्ष (Varsha), which in plain and simple language means a 'year'. Though there are several kinds of year—the tropical, the sidereal, the anomalistic, etc. the tie is between the solar year and the lunar year. While the majority of astrologers take the solar year for purposes of Dasa calculations and Mantreshwara's clear dictum has been often quoted in THE ASTROLOGICAL MAGAZINE, yet there is another school, which stoutly sticks to the lunar year as the standard measure for calculating Dasas. Among the occidental scholars, who have adopted Hindu Astrology, the chief exponent of the lunar measure is Mr. Nixon. He obviously derives support for his school from a host of practicising Hindu astrologers (who are no less well-versed in Sanskrit texts, than the Pandits of the other school)—who propound the theory that since calculation of Mahadasas is based on Nakshatra (constellation) system and position of the Moon in the zodiac, it is the lunar year, which is the basis of the Dasa. It is a different matter that the system of Adhikamasa (intercalary month) has been introduced, to import constancy between the relationship of the solar and the lunar standards, but the Mahadasa being a product of and incidental to the Moon-constellation union, must be governed by the cycle of the Moon. The monthly periods of the females are often cited as a direct influence of the lunar cycle.

Planet *vs.* Dispositor

I would now pass on to another point which I have no doubt would surprise a large number of readers. As far as I am aware, two *Jataka Paddhatis* are considered as top ones—one of Keshava and the other of Shripati. Here I shall deal with a sloka from Keshava's *Jataka Paddhati*. It reads as follows:

नीचो तोभभगणाच्युत: षऽधिक-
श्चेत्षट्हृद्दौच्यं बलम्
स्वर्क्षेऽर्द्धं समभेऽष्टमाश्चिचरणा मूल
लिकोणे बलम्
मित्रर्क्षेंघ्रं रधीष्टभे त्रय इभांशा
वैरिभेष्टवंशको
दन्तांशोऽध्यरिभे गृहादिपवशात् खेटस्य
सप्तैक्यजम् ॥

—(*Sloka 5*)

In this text I would invite attention to the wording गृहादिपवशात् occurring in the 4th line—depending upon the position of the lord of house, etc.... (in which a planet is posited). If we change one letter in the above phrase and make it "गृहाधिपवशात्", it would mean "according to the lord of the house". I would invite attention to the commentary on the above sloka which reads as follows:—

"....गृहादित् पन्ति ये ते गृहादिपा:
ग्रहादि सप्तवर्ग स्वामिनो ये सन्ति
तद्वशात्
स्वर्क्षेऽर्द्धमित्यादीनि खेटस्य सप्तवर्ग
बलानि ग्राह्याणि...."

It is not clear, who the Sanskrit commentator is, but the commentary explains that we have to take the dispositor's strength. This view, however strange, does not stand isolated. Sanskrit knowing astrologers are well aware of *Nilambar*, the author of *Gola Prakash*. He is taken as a standard author on astronomy. This Nilambar's elder brother Jivanatha was author of many works on astrology (*viz. Bhava Prakasa, Bhava Kutuhala, Vanamala, Prashna Bhushan, Janma Patrika Vidhanam* and a host of others. His father Shambhunath was also an astrologer of great repute. This *Jivanath* in his work *Janma Patrika Vidhanam* written in Saka 1776 (about 104 years back) says in the text of *Saptavarga Bala* as follows:—

सप्तवर्गोद्भवं वीर्यं गृहाधिपवशादनुधै: ।
तदैक्यं खचरस्यात्र निरूक्तं मिहिरादिभि: ॥

"....अयमर्थ: । ग्रहो यास्मिन् गृहेऽस्ति तद्गृहस्वामिन: स्वर्क्षोच्चुक्तबलं ग्राह्यं । एवं होरादिस्वामिनामपि । अथोदाहरणम् ।

रवैं: गृहाधीशो गुरु: स च
समभेऽतोष्टमांश बलम् गृहे ०.७.३०
रविस्वहोरायां तेन रवि रेव होरेश:
समगृहेऽतोऽष्टमांशएव ०.७.३०.

(—Page 61)

These couplets are followed by Sanskrit commentary in prose. The Sanskrit commentary translated into English would read as under:

"...When a planet is in the house of another, look to the lord of that house, if he be in his own house, etc. the coresponding strength is to be taken. And so, look to the lords of 'Horas', etc. also. Here is the example. The Sun being in Dhanus (Sagittarius) the lord whereof is Jupiter—that is in the house of neutral, therefore the strength allotted will be 1/8th. The Sun is in his own Hora, therefore the Sun himself is the lord of the Hora. He is however in the sign of a neutral so the strength allotted would be 1/8th...". In the example horoscope which has been given by the author Jupiter and the Sun are in 5th and 9th from each other, and have become temporal enemies and as the Sun is the natural friend of Jupiter, the Sun has become a neutral. The readers would see

Weekdays in Samskrit Literature

BY U. VENKATAKRISHNA RAO, M.A.

DR. KEITH, the historian of Samskrit literature, categorically cites the view of Dio Cassius, the Roman Historian (150–235 A.D.) under Marcus Aurelius, that the calendrical use of the planets was regular in his time and in 321, the Emperor Constantine gave the seven days' week its definite sanction by appointing Sunday as a day of rest (Pp. 531 History of Samskrit Literature, Oxford 1928). The harnessing of the planets' names to the days of the week must be prior to Dio Cassius, but Keith mentions, that the earliest use of such a week name in an inscription in India is A.D. 484, Eran inscription (as also referred to by Sri R.C. Hazra of Dacca University in his "Puranic records and customs", Pp.83). Though thus mentioned for the first time in 484, it is strange that it is rare till about 800 A.D. after which only such definite references to weekdays are common in our inscriptions. These are quite common now in our daily sankalpas.

The Germans called Sunday *Sonntag*, the former half of the word being the precursor of the English Sun. The Anglo-Saxons called this 'Sunnan Daeg' through which the modern English word Sunday is derived. The Moon is responsible for the name of the second day, and the word is traced back to 'Monan daeg' in Anglo-Saxon, where the genitive singular of Moon was 'mona'. The third day was called in Anglo-Saxon 'Tiwes daeg' as it was dedicated to the God of War '*tiw*', a deity made to correspond to the Roman Mars. Germans called this 'Dienstag'. Tiw was cognate with Greek Zeus, Dios and Latin Jupiter or Jovis. The fourth day was dedicated by Teutons to *Woden* or *Odin*, the chief Teutonic deity; the Anglo-Saxons called it 'Wodenes daeg'. Thursday was originally sacred to Thor, the old Teutonic God of thunder. The Anglo-Saxons called it 'Thunres daeg', thunres being the genitive of thunor or thunder. Icelanders called it Thorsdag (Thor's day) and the Germans *Donnerstag*. Friday is to be traced back to 'Frige daeg' or the day dedicated to the goddess, wife of Odin. She was referred to in Latin as Frigge. Saturday was sacred to Saturn according to the Romans, when according to their scriptures God took rest after his strenuous work of creation for six days, it was the Jewish Sabbath. The Anglo-Saxons called it 'Saeter daeg' or Saetern dag, day of Saturn. Saturn was the ancient Roman God of agriculture, his annual festival being called Saturnalia. The Greeks and the Egyptians divided their month of thirty days into three parts of ten days each only.

But Prof. V. S. Krishnaswami of Kodaikanal, in an article in the *Sunday Standard* recently suggested an Egyptian origin for this harnessing of the weekdays with the respective planets presided over by the Sun. According to him, the seven planets are to be regarded as the presiding deities for the 24 hours of the day. The geometric distance to each planet from the Sun settles their order, Saturn, Jupiter, Mars, Sun, Venus, Mercury and Sun. So if the Sun is to be the presiding deity of the first hour of Sunday, $7 \times 3 = 21$, the deity for the 22nd hour will be again the Sun, 23rd will be presided over by Venus, 24th by Mercury, 25th or the first hour of the next day comes to be presided over by the Moon and so will be called Monday. In this way, the names of the other days can be decided by the name of the first hour-god. Thus these weekday names spread from Alexandria to the other places through the traders. Though the Greeks were dividing their 30 days into 3 weeks of 10 days each, they found the seven-day week more convenient and they first accepted this about the time of the birth of Christ; soon the Romans also, who had till then adopted an eight-day week, with the 8th day Mundane—set apart by them to make their purchases in the central cities, in the time of Constantine the Great (274–327 A.D.) fell in line. In the eastern countries, again, Arabia took the lead in popularising this 7-day week and all the countries they visited, *viz.*, Persia, India, China and Japan and the rest followed suit. In China, before switching on to the 7-day week, they seem to have divided the year of 360 days into six parts further divided into 3×20 day-groups.

How the number seven came to be conveniently fixed for the number of the weekdays deserves to be investigated. The stars are counted as 27 now, but their first recounting in the Yajur Veda and later in the Atharva Veda gives us 28 and not 27 nakshatras. They became 27 probably in Varahamihira's time, and he seems to have been responsible for making them begin with Aswini (and not with Krittika as they were till his time). These stars are poetically conceived to be the wives of the Moon, in whose houses, the husband stays during the night. This 28 is easily divisible by 7 and that seems to have been the reason why wages were also calculated in terms of so many weeks. In the villages, again, the women calculate the monthly periods counting 28 days for the month. The Egyptian priests divided their lunar month into 28 days, further sub-divided into four parts. Anyway, this seven-day week is not heard of in our Vedic literature; even in the Amarakosa, when even minute divisions of time, as well as Yugas, Brahma's day (sahasrayuga of men), year, etc. are mentioned, the week in the sense of seven days seems to be significantly absent. Perhaps the earliest reference to the seven-day week in our literature is on the occasion of the seven days' incessant rain showered by Indra when the Govardhana Mountain had to be lifted by the Lord to protect His devotees in the Bhagavata Purana. It was this very Purana again that started the practice of public recitals of this Purana within seven days exactly after Suka had expounded the same to King Parikshit in as many days.

Among the Western astronomers, Herodotus (484–424 B.C.) asserted that every month and day had special presiding deities and each man's future could be predicted with the help of the date and hour of his birth and native star. The Babylonian astronomers had studied the nature of the 12 monthly transits of the Sun starting with the Aries. Varahamihira provides us with their Samskrit names in his astronomical books and Amarasimha has also referred to them. The custom of casting one's horoscope from the date and hour of one's birth and more particularly seeing whether the horoscopes of the proposed bride and bridegroom agree or not, seems to have been a Babylonian custom introduced long after the Epic period into India. As a matter of fact, we do not hear of such 'tallying of horoscopes' in either of our Epics (or even in Vatsyayana or Manu) though the five planets being in the ascendant at Rama's birth already in the early Rama epic. Kautilya in the 3rd century B.C. even goes to the extent of ridiculing our dependence on the stars or the position of the various planets or the Sun in the sky. (But Vatsyayana declares 'The stars, Sun, Moon,

planets and different zodiacal signs are sentient indicators of good and evil). Even the word Hora in the title Horasastra is borrowed from the western word meaning hour, though ingeniously attempts are made to posit an indigenous origin from the word 'ahoratra' (with the loss of the initial and the final syllables). But Valmiki even as early as the 10th century B.C. had known the various 'thithis' or days of the fortnight as pratipat when study was forbidden and was aware of the conjunctions of various planets influencing man's birth..... *Vaakpatau Indunaa Saha* at the birth of Rama. This indication of future prosperity (or impending misery)..... *Suuchita Bhaagyasampadam* in Kalidasa's words—was definitely studied in India alone and not borrowed from foreigners in Babylonia. Dr. B. B. Datta in a learned article in the Ramakrishna Centenary Volume establishes this fact. According to him the 'mandagati', 'purogati' and 'vakragati' of these planets and their banal or beneficial results on us were already studied by our ancestors even in the time of Varahamihira. Kalidasa refers to such banal results on Kama just when he started to Iswara's hermitage in the 3rd canto of his Kumarasambhava. the "purahsukrnm" presaging his death soon after. In one word, the very fact that this science was called *nakshatra vidya* shows that our ancestors were keen observers of the movements of the various planets and stars in the starry heavens. If they might not have had scientific instruments like the modern telescope, they had perfected an instrument called 'tureeya'. They had organised observatories or 'vedhashaalaas' at different places and the one in Ujjain was very famous. Lanka was situated on the equator and we read that there was a famous observatory there also. Aurangzeb's contemporary, Jai Singh maintained such a well-equipped observatory also.

Varahamihira is however not unmindful of foreign borrowing in his science. He honours them as Rishis; but Alberuni's testimony itself, we dare say, will be enough to show the high level of astronomical acumen acquired by our ancestors. Notwithstanding all this, Western scholars who argue that much of our astronomical knowledge is borrowed, are not wanting. Dr. Keith is obsessed by this idea and the one word 'jaamitra' used by Kalidasa in the first sloka of the seventh canto of the Kumarasambhava is connected by him with the Greek word 'diametron'. He does not at all pause to explain the full implications of this borrowing, but rushes to this dogmatic assertion. The verse itself in question refers to the marriage of Parvathi being celebrated on a day having 'jaamitra shuddhi'. The verse is

अथोषधीनामधिपस्य वृद्धौ तिथौ च
जामित्रगुणान्वितायाम् ।
समेतबन्धुर्हिमवान् सुतायाः विवाह-
दीक्षाविधिमन्वतिष्ठत् ॥

Kalidasa actually refers to many such other muhurtas or auspicious times as for example the 'Brahmamuhurta' in which Aja was born and 'Maitramuhurta' for Parvathi's marriage decoration, but the way these moments are referred to shows that it is characteristically an Indian approach. Parvathi's marriage was celebrated in the bright half of the month when the Moon exhibits a tendency to grow bigger; this according to him, symbolises the fact that the conjugal love of the couple would also increase likewise. The 'thithi' or the day indicated *jaamitra* which also signifies that the husband married on that day would naturally become the 'mitra' or friend of the 'jaayaa' or the wife. When such an indigenous explanation is easily possible, it is not at all clear why the learned author should read any Greek influence. As a matter of fact, the Greek word for diameter in mathematics might be diametron, but there is no mathematical idea associated with the context as is obvious to everybody. Our ancestors were keen observers of the sky and could ascertain the exact period of the night by glancing at the sky. This is quite clear from the way in which the disciple of Kanva, in the beginning of the IV act in Sakuntala, was asked to go out and ascertain the time. His report is couched in the famous sloka:

यान्येकतोऽस्तशिखरं पतिरोषधीनाम् ।
अविष्कृतोऽरुणपुरःसर एकतोऽर्कः ॥

"The Lord of potent medicinal herbs, the Moon goes on one side (of the sky to the setting mountain; the Sun pushing to public gaze (his legless charioteer) Aruna, comes up on the other side". The significance of this sloka deserves to be grasped: The Moon, who possesses medicinal herbs like the 'mritasanjeevini' capable of reviving even the dead, has himself to become a prey to death, while the Sun with a legless and inefficient charioteer, can easily come up. Evidently the insinuation seems to be, the auspiciousness or otherwise of the stars or the planets at the time of birth indicates the future rise or decay of the person concerned *'loke niyamyata iva astamadashaantareshu'* in the poet's immortal words.

AMBIGUOUS TERMS IN HINDU ASTROLOGY

(Continued from page 108)

how very divergent this view is from the other view, with which we are all too familiar.

There are many diversities of interpretations in Hindu Astrology. I do not condemn them but commend them because differences indicate intellectual strength and virility and much exercising of thought. I conclude this article with the hope, that in future, I shall have occasion to cite more instances of diversity of interpretations of Sanskrit texts and thus provide food for thought to the thousands of readers of THE ASTROLOGICAL MAZAZINE, who refer to it for fresh light in every issue.

AYURVEDA

or **The Hindu System of Medicine**

4th EDITION

BY B. V. RAMAN

With an Introduction by

W. B. CROW, D.SC., PH.D.

In this book an attempt is made to explain the broad outlines of Ayurveda to the general public and give them an idea of the grandeur and importance of this ancient Medical system. Every true Indian must study this lucid exposition.

OPINION

"The book is nicely written and the get-up is decent".

Prof. J. C. GHOSE, M.A., F.C.S.

Influence of Planetary Colours on Racing

BY S. KHIOGI

WHEN I wrote to the Editor of this Magazine expressing my desire to publish this article in his paper, his manager replied to me that personally the Editor is not so much interested in Commercial or Racing Astrology. I think, the reply was just an appropriate one for a subject like this. A person cannot, but be sceptical in his views on such articles, as uptil now the myth of all sure systems published on Horse Racing have proved to be fallacious when put to actual practice and testing. Surely, I shall not blow my own trumpet except in the interest of this great science of astrology. Beginning with an "Error and Trial" method my unfailing observation and experience in the pursuit of colour research for the last 22 years have turned and forced my unwilling belief into the conviction that all the signs and the planets of the zodiac have their own true colours, independent of the various colours conceived and attributed to them by different authors in this subject of planetary colour system.

The object of publishing this article is not so much to give out the full secrets of one's life work to get rich-quick to those students of astrology, who follow various colour systems as given in printed books, but still groping in the dark to find out winners. On the contrary, my purpose is two-fold. First, that the lessons thus obtained from colour research should not pass away with me. Second, if they are published then many of learned readers with their vast knowledge in astrology can better utilise them in other branches of this science for the benefit of mankind. For instance, experiments are going on to heal patients by the art of applying different shades of coloured lights on them. If the right colour of the right planet, which causes ailment according to Medical Astrology, can be ascertained, then the method of application of coloured lights is bound to improve.

Lastly, I humbly submit that I am neither a scientist nor an expert in Dyer's Art. Still, I have made an attempt to arrange this subject of planetary colours in a scientific manner and in harmony with astrological laws and principles.

For the sake of convenience, I have divided my subject-matter into two parts. My present article is mainly concerned in dealing with the colours of planets and signs in relation to their influence on mundane objects and events. The second part will deal entirely with spotting out race winners with the help of these planetary colours, which will correspond with the owner's racing colours.

In order to determine a winner by planetary colour system, the first thing we require, is casting of a horoscope of a specified race time, wherein the colour of the then dominating planet in relation to the sign, will correspond to the winning colour of the owner of the horse—which is represented in the blouse worn by the jockey.

Many of my readers will be inquisitive to know in the very beginning from the title of the article what causal connection planets have on a owner's racing colour. Do planets have their corresponding colours and are we influenced by them? We learn from the science of astrology that planets exert an influence on our daily events of life through their rays. Tracing a line through their rays, which carry colour, it can be possible for us to find a connection between their corresponding colours in the winners. The respective colour of a planet finds its identical correspondence in the colour of the winning horse, when the planet itself figures prominently in the heavenly chart of the set time of a race.

Even, if we admit that the predominant planet lends its colour to the colour of the winning horse, still the question remains, that when horses carry equalising weights, why the horse while running should come in front leaving others behind? It is said that interplanetary action implies the transmission of energy, which we recognise as force, light, attraction, etc. It is this energy of the then prevailing planet, which we presume gives extra speed to the winning horse.

Perhaps, a brief history of all about planetary colours tracing from the ancient writer Sibley down to the modern ones like Sepharial and others will not be out of place to mention here. This will not only enable my readers to have a comprehensive view of the subject, but by a comparative study of the theory, *that the colours of the planets in relation to the colours of the signs are the main causes of bringing in race winners will be quite manifest to them.*

When we go through the records of the perplexing question of colour distribution to the planets by different authors, we find our power of understanding and thinking in a state of confusion as to the selection of right colour for the right planet. This confusion has been aptly described by Mr. R. L. Sutaria in his *Astrology of the Race Course*, page 72 in the following lines:—

"Colours have been assigned to planets empirically, but still in a half haphazard manner and after you have gone through all that is said about them by authors from Ptolemy down to Sepharial, you will find yourself in a labyrinth: There is no systematic arrangement and no two authors agree, as regards the colours ruled by the planets. Compare, for instance, Raphael and Sepharial:—

Raphael (Horary Astrology, p. 53)
Colours signified by the Planets:

Uranus—Checks and mixed colours.
Saturn—Black.
Jupiter—Green, spotted or ash coloured
Mars—Red, scarlet.
Sun—Saffron or yellow, sandy.
Venus—White and bluish.
Mercury—Grey or dove coloured.
Moon—White, cream or pale green.

Sepharial (A Manual of Astrology, p. 12)
Planetary Colours:

Neptune—Mauve or Lavender.
Uranus—Streaked and mixed colours.
Saturn—Black, dark brown and indigo.
Jupiter—Purple, Violet, mixture of red and indigo.
Mars—Scarlet, red and carmine.
Sun—Yellow-brown, orange, gold and the deeper shades or yellow.
Venus—Lemon yellow and pale blue: "Art Tints" in general.
Mercury — Slate colour, spotted mixtures.
Moon—White, opal, green and iridescent silvery hues.

Aries takes you no further. According to him, Mercury rules red and french grey, colours as apart as the poles."

Please compare the conflicting colour accounts and also look into the discrepancy in the respective colours of Jupiter, Venus, Mercury

and Moon, as stated above by the authors. This is nothing but confusion worse confounded. But Mr. Sutaria himself is not free from the same deficiency of which he has tried to point out about other authors, however, genuine their defects may be. In Pp. 10 of the same book, we notice the following lines "with a little imagination and judgment, you are in a position to interpret the colours of the planetary configurations. For instance, a conjunction of Mars and Saturn will indicate a dark shade of red, *e.g.* maroon, cherry, claret, etc., but if there are separate benefic aspects from the two planets, you should look for a combination of the two colours, *e.g.* 'crimson, black maltise cross', 'cherry and black hoops', 'black, cerise belt and sleeves', etc.

But with all deference due to the great author, I assert from my previous experience that the principle he has tried to establish here is not only misleading but erroneously conceived. During the early days of my faithful following of the methods given in "Silvery Key", "Golden Key", "Astrology of the Race Course" and other works for finding sure winners, I not only came to grief, but found that these methods were far from truth and the principles they wanted to establish were wrong. Truly speaking, if anybody is really in possession of any sure method of finding winners, he will certainly not take recourse to publishing books leaving aside the golden path of amassing fortune in the quickest time on the race course.

So, the instance of the conjunction of Mars and Saturn, cited above, may have any other meaning in astrology, but has nothing to indicate a dark shade of red, when the planets themselves are thus conjoined together. The proof indicates otherwise for a dark shade. Take for example the colour *claret* of Mr. Sutaria's instance. If we venture to say that Mars whose colour is red, when aspects on the sign Taurus whose colour is light blue, brings the complimentary colour claret, then it can easily be tested with the help of a student's Water Colour Box. Though a crude method of test for the coloured lights of planets, still it will give an idea on mixed colours.

Let us examine also, what effect the relation of Mars and Saturn has between them by way of aspect. The result is that when Mars aspects on the sign Capricorn whose colour is black and whose owner is Saturn, the requisite colour of such relation is *chocolate. So, it is not the conjunction of Mars and Saturn is responsible for the colour claret. It is the relation between Mars and Venns, which effects this colour.*

Take the second example of Mr. Sutaria from that same page on these planets of Mars and Saturn, *i.e.*, "If there are separate benefic aspects from the two planets, you should look for a combination of the two colours, *e.g.* "crimson, black maltise cross", "cherry and black hoops", "black, cerise belt and sleeves", etc.

I ask my readers to pause for a while and give a little thought over the matter. We take for granted that Mars and Saturn are equally predominant in the chart of a given race and three horses are running, each one carrying exactlv one of these respective shades of red of Mars along with Saturn's black. What would be the result? Will the three horses 'Dead hit' for the first place, because, they have received the same amount of energy and influence from these two planets? Certainly not! *Mars is not at all the maker of the colours crimson, cherry and cerise* as mentioned above. For example, if I mention again that *it is the Sun whose colour is orange aspecting on the sign Scorpio, whose colour is deep red creates the colour cerise* and Saturn aspecting on Capricorn, both indicating black, then the horse running under the owner's racing colour of "Black, cerise belt and sleeves" of Mr. Sutaria's description will come as winner out of these three horses. The truth of this colour variation originating from the relation of Sun and Mars (ruler of Scorpio) can also be tested with the same colour box and verified on actual race ground; we do it more so because one can be convinced that what we are trying to establish as true is true for all times.

Here I mention one of the main principles relating to planetary colours for finding winners. "The original colour of a planet and that of a sign undergo a change in mutual aspect, when both of them are not composed of the same primary colour". In other words a planet gives the requisite mixed colour when it is in aspect with a sign colour but themselves are of different basic colours. When the planet and the sign are composed of the same basic colour, then they will repeat the same colour. As in the case of Mercury and Gemini, both of their colours are yellow. Here they will repeat yellow when in mutual aspect.

This fear is the brief comparative history about planets.

Before we enter into our own scheme of planetary colours let us examine the colours of the signs of the zodiac as narrated by other authors in the same comparative light for a better understanding of the subject.

Mr. Pegasus in his 'Racing', Pp. 67 observes that "one of the first difficulties is to decide the correct standard of colours. Most of the writers have devoted chief attention to the colour of the planets whereas our own experience shows that it is more concerned with the colours ruled by the sign. The spectroscope of the colour scheme is really ruled by the earth's circle of 12 signs of the zodiac. The ancient writer Sibley who records from very old sources hands down a classification of the colours of the signs of the zodiac as follows :—

Rules—the colours of : —

Aries—White mixed with red.
Taurus—Red mixed with citron.
Gemini—All mixed red and white colours.
Cancer—Green and Russet.
Leo—Red and green.
Virgo—Black speckled with blue.
Libra—Black, dark crimson or Tawney.
Scorpio—Prefers a brown colour.
Sagittarius—Yellow, green colour tending to red.
Capricorn—Black or dark brown.
Aquarius—Sky colour or blue.
Pisces—Pure white colour, silver.

But the author admits here that "Sibley's colour list lacks several such as gold, orange, purple, etc. and puts down the "Esoteric" classification of colours by the theosophists given in the same page.

We compare this with Sepharial's in his "Kabala of Numbers". (Pp. 76).

"Esoteric"

	Mentioned by Pegasus	*Sepharial*
Aries	Red	Red
Taurus	Indigo	Pale blue
Gemini	Yellow	Yellow
Cancer	Violet	Green
Leo	Orange	Orange
Libra	Indigo	Pale yellow
Scorpio	Red	Black
Sagittarius	Blue	Purple
Capricorn	Green	White
Aquarius	Green	Blue
Pisces	Blue	Grey

There is hardly any semblance between the two, as if fancy has been given a free hand to play its own role. Moreover, we notice Pegasus' assignment of the colours of the spectrum exclusively to the signs only which we note in these words. "The Spectroscope of the colour scheme is really ruled by earth's circle or 12 signs of the zodiac". It is poles asunder from the angle of vision of the set of authors, who always assign the prismatic colours to the planets only.

If this be the state of affairs, one may ask, then how to arrive at the true solution for colours? In response to this query, we prefer to submit for consideration of our own scheme of actual colours of the planets and the signs of the zodiac, in order to solve this vexed problem of planetary colours. They are as follows :—

The respective colours of the Signs

Aries	Red	*Libra*	Light blue
Taurus	Pale blue	*Scorpio*	Deep red
Gemini	Yellow	*Sagittarius*	Blue
Cancer	White	*Capricorn*	Black
Leo	Orange	*Aquarius*	Deep blue
Virgo	Light pink	*Pisces*	White

In order to prove that the colour scheme presented here is genuine, I propose again our previous method of test, to examine the colours mentioned below in favour of our arguments for the proof. We have proved in our previous examples that the original colour of a planet and that of a sign will undergo a change in mutual aspect, when both of them are not composed of the same primary colour. To express it in clear terms, the identical mixed colour will recur each and every time without fail, when the identical planet and the sign with their proper colours, will be related in mutual aspect. But, if the colours of the planet and the sign are not composed of one fixed colour only but variegated, then the mixed colour will also be a variegated one and will fail to produce that very mixed colour which is the natural outcome of these two particular basic colours. Take for example the mixed colour gold. It is produced when Mercury whose colour is yellow aspects on Virgo, whose colour is light pink. But if we say Mercury's colour is also grey and that of Virgo's dark-green, *then this colour gold, will never be produced by the mixture of grey with dark green which on the other hand will only produce a colour hotch-potch.* These colours of grey and dark-green, along with others have been ascribed respectively by Raphel and Sepharial to these planets and have been quoted in our article for reference. Therefore, *proceeding from the colour gold to the colours yellow and pink—the makers of gold, we inversely prove our proposition that the colours proposed in our colour scheme are proper and genuine* and will never fail to produce that mixed colour, whenever they are asked to act upon in similar manner.

My readers are now requested to make some observations on our colour scheme. Perhaps, it has not escaped their notice that this allocation of colours to the planets is not according to the principles of division of the colours of the spectrum. To account for this discrepancy, we like to mention that these seven colours of the spectrum come from the rays of the Sun reflected on a prism. But planets are independent bodies and have colours of their own choice. They should not be supposed to be standard bearers of the colours of the Sun. All previous thinkers on planetary colours allotted these seven colours to the seven planets. Probably, on the notion that as there are seven planets and because of the discovery of the seven colours from the Sun, the greatest luminary round whom all other planets revolve in the solar system so legitimately these colours should go to them. Hence, they allotted these colours to the seven planets; but each author allotted them according to his own way of thinking, *i.e.*, some distributed green to Venus, some to Saturn and others to Moon. I do not know what meaning this allocation of the *Vibgyor* colours of the 'Rainbow' conveys to the planets themselves. They may have some significance and influence on other mundane events; but so far spotting out of winners by these prismatic colours are concerned, I have not the least hesitation to say that this is the common mistake and greatest blunder made by all other authors, who tried to solve their problems for finding winners by ascribing these prismatic colours to the seven planets.

The next point to note is that the planets Uranus and Neptune have not been allotted any colour whatsoever in this colour scheme.

The Western astrologers have ascribed a good many attributes to the nature of these planets and have sanctioned certain functions to be performed by them according to their positions in the 12 houses of the zodiac. Similarly, they have distributed certain colours to these planets in their scheme of planetary colour distribution.

If anybody finds them absent now from the colour scheme as proposed here, then the obvious conclusion would be that the scheme itself is incomplete and hence incapable of picking up winners.

To the best of my experience and knowledge, I shall try to prove here that these two planets might have their say on other earthly objects and events, but have nothing to do with colours so far as horse racing is concerned.

As it might arrest our attention in connection to our present burden of proof, we quote from the preface of Sepharial's *The New Manual of Astrology*. Here Sepharial gives his views on astrology in relation to these two planets and puts it this way : "*In an experimental subject like astrology*, there is always something fresh to be said and much that needs to be told anew in the light of a more catholic experience than that enjoyed by astrological authors of the seventeenth and eighteenth centuries. The discovery of the planet Uranus on the 13th of March 1781, and of Neptune on the 20th of September 1846, has enlarged the field of our researches and put us in touch with causative influences hitherto unrecognized by astrologers." If this be the position of astrology, then we must admit that minus these two planets, it loses all its value as a science. Even, if we admit that there is always the scope to interpret the subject-matter of astrology in the light of a more 'catholic experience', but that does not mean that we should always go on experimenting on it and shall never attain that sound judgment of prediction, without the help of Uranus and Neptune. Pluto is already within our sight, sooner or later he also will be given a portfolio like these two planets. Again, who knows that other heavenly bodies hitherto unknown to us will not enter the arena to 'enlarge the field of research in this experimental subject of astrology'.

To the ancient Hindu astrologers, the planets Uranus (*Projapati*), Neptune (*Varun*) and Pluto (*Rudra*) were not unknown bodies to deal with.

But the Hindus never raised these planets to the status of those seven planets namely, the Sun, the Moon, Mars, Mercury, Jupiter, Venus and Saturn, who guide the destiny of mundane objects both animate and inanimate. The reason for such differential treatment may be that they observed that these three planets were so very distant from our earth, that their rays, so to speak had no effect on earthly events.

Perhaps, nobody will cast the blame upon the Hindu astrologers, that for the omission of these planets from Hindu horoscope, their prediction about the nativity of a person or event was incomplete or erroneous. Even today, there are astrologers in India, who by their oriental system of casting of a horoscope and method of judgment can predict day-to-day events, with all the accuracy and details it demands.

With these impressions and informations, as we turn to our burden of proof again, we notice that previous authors found correspondence in the colours of these two planets to that of the owner's racing colours. So they assigned violet, lavender, lilac and heliotrope to Neptune and grey, black and white, all checks, stripes, hoops and all mixed colours with their eccentricities like bird's eye, shamrocks to Uranus. But enlarging the field of our colour research to the furthest end, we find nowhere these two planets having 'causative influence' on a owner's racing colours. To be precise, *all these colours and their mixtures described as checks, hoops, etc., are exclusively formed by the proportionate distribution of the respective colours of these seven planets only and come directly under their colour rulership.*

I reveal another secret about the formation of these colour mixtures with their varieties formed by the seven planets. The secret which can be treated as a principle lies in the fact that whenever more than one planet is prominent in a race chart, the respective colours of these planets are as broadly represented in the winning colours of the owner in the shape of hoops, stripes, etc., as to the strength of the planets in the chart. In other words, the colours of the planets are as broad based in the colour of the winner as to the force of the aspects, they exert on the signs.

Let us examine the truth of the above statement in the light of some examples. Take the case of Jupiter and Mercury, whose respective colours are blue and yellow. Both are equally prominent in the chart and both are aspecting only on Gemini whose colour is also yellow. The result would be that the former's blue aspecting on yellow (Gemini) will produce the mixed colour of dark green and the latter's yellow on Gemini's yellow will repeat the same basic colour. We find the winner in the shape of "yellow with dark green hoops". Take another example of Mercury and Saturn, both aspecting but on separate signs and are prominent in the chart. Mercury aspecting on Virgo whose colour is light pink produces gold and Saturn on Capricorn repeats black. The winner is found in "Gold with Black Checks". In the last example we find Jupiter alone aspecting on both the signs of Leo and Sagittarius whose respective colours are orange and blue. The winner is there carrying the owner's colour of "Blue with Lilac Bird's eye".

We do not produce actual race charts here in support of our cases, just for the sake of uselessly enlarging the pages of this article. It is needless to mention here that those adherents of *astrology who follow various colour systems in racing, must have observed in the charts of many races that stripes, shamrocks and such other varied colour combinations are manifest in the winner, when Uranus is not at all prominent in the race chart; or violet, lilac, etc., coming as winning colours without the least influence of Neptune.* The cause does not lie far to seek. The fact is, that truly these colours and their combinations come under the rulership and jurisdiction of the seven original planets only. In the case of our last example, it is not Neptune's Lilac or Uranus' Bird's eye which are responsible for the colours in the winner, as has been assumed and assigned to these two planets by all other authors. Here blue is more broadly represented in the colour of the winner because of the more powerful aspect of Jupiter on Sagittarius than on Leo of the same planet for lilac.

I hope, that from the facts and figures adduced in support of our arguments, my readers have been convinced that the planets Uranus and Neptune have no place in the affairs of racing. They have consequently no right or claim to the colours, which are the exclusive property of the seven planets only so far as the colours in this game is concerned.

To say that it is not within the scope of our subject-matter, still it is not unreasonable for one to be desirous to know that when one part of the proposition has been proved to be true that Uranus and Neptune have no effect or action on colours, then what about their sphere of influence on a person's horoscope or on other mundane events? It is a debatable point and I leave it to my learned readers for the answer.

The last thing to observe in our colour scheme is that various colours have not been allotted to a single planet unlike all previous authors.

For instance, some of them say that the colour of the Moon is white or silver white, while others ascribe opal, green, yellow, etc. But a planet has not only one colour either primary or mixed. It cannot be black, white and brown at the same time. Either it must be black or white or brown or other than these, but not all of them at a time. If we assume that a planet has variegated colours, composed of different hues, then when it comes in contact with the colour of a sign, it produces a hotchpotch of colour, as has been shown in our example for the formation of the mixed colour gold in this article. *A single planet with variegated colours will never be able to bring a winner, when it aspects on a sign.* If we argue for argument's sake that brown is a hotchpotch of colour and when we find a winner with brown colour, then it is not the action or influence of a single planet representing this colour. Brown is formed by Jupiter, Mars and Mercury when all of them simultaneously aspect on a sign whose colour is either red or yellow or blue. We have also shown that colour combinations are the actions of different planets. So a planet cannot be black and white at the same time. Our previous examples in support of our colour scheme also prove that *a planet has not got more than one colour.* I hope, these observations made by my readers will enable them to look to the merits of our colour scheme and also to its marked advantages over other colour methods to follow.

The modern art of dyeing has extended this science of colour to an endless variety of colours. Therefore, for the benefit of the followers of colour system, I shall give here a list of colours, but shall confine myself to those colours only which have been found to be formed by the planets in relation to the signs and have also been found corresponding

The Riddle about a Well-known Verse of Varahamihira

BY PROF. R. V. VAIDYA, M.A., B.T.

Introduction

FULL twelve years have elapsed since I published in Marathi Magazines, articles on the "Date of Bharat Battle". I have published on the subject, articles in THE ASTROLOGICAL MAGAZINE also. Although the date published by me, *viz.*, 2786 B.C. is correct, still, all these 10 to 12 years it had been my impression based on references then available, that scholars have committed an error in translating the following verse in Varahamihira's *Brihat Samhita* incorrectly :—

आसन्मघासु मुनयः शासति पृथिवीं
युधिष्ठिरे नृपतौ ।
षड्द्विकपञ्चद्वियुतः शककालस्तस्य राज्ञश्च ॥

The above means: "When King Yudhisthira was ruling the earth, the Saptarshis (Great Bear) were occupying the constellation of Magha. The year in terms of Yudhisthira Saka could be obtained by adding 2526 to the current year."

No rational thinker could be brought round to believe that one cluster of stars would be leaving its place and would be moving in the regions of other stars turn by turn. This is as good as saying that mountain Vindhyas were once occupying the territory of Bengal. I will now attempt to place before learned readers the correct meaning of this verse and to show how the wrong interpretation of the original verse of old sage Garga has misled some scholars throughout the last 1500 years while calculating the date of Yudhisthira, and thence that of Bharat Battle.

I

The Text and Context

The above verse is numbered 'three' in the chapter on the movements of Saptarshis in *Brihat Samhita*. In verse No. 2, Mihira declares that he was describing this "in accordance to the views of old sage Garga".[1] Varaha has been good enough to include in the text the original verses of the old sage in support of his own, with the remark "so says old Garga".[2] He gives the following verse just before the commentary on verse No. 3 along with other verses at the end. Fortunately for us, the commentator has not given any interpretation of his own of these verses[3] :—

कलिद्वापरसंधौतु स्थितांस्ते पितृदैवतं ।
मुनयो धर्मनिरताः प्रजानां पालनेरताः ॥

These verses show that old sage Garga has used the following qualifying words to the word *Munayo*.

धर्मनिरताः—meaning "devoted to religion".

प्रजानां पालनेरताः—"devoted to the welfare of people".

स्ववर्ग परिपोषकाः—"Given in charge of looking after the interests of their respective communities".

Prof. R. V. VAIDYA

क्रतोरेनं विनिर्दिष्टाः—May mean "given some appointment or office in the sacrifice".

How can we speak of stars as being devoted to religion and to the welfare of people? *These epithets can apply to human beings alone and never to inanimate objects.* Varaha has clearly committed a blunder in rendering *munayo* as seven stars. A further consideration is, therefore, necessary to arrive at the correct meaning of the old Garga's verse.

II

A careful scrutiny of the above said five verses, given in the footnote, can at once lead a rational thinker to find that,—

(*a*) Varaha has interpreted the word *munayo* as *seven stars* because of the word *Pitri Daivatam* appearing in the original verse and which has been interpreted by him as the star Magha, since this star is believed to be controlled by the deity *Pitri*.

(*b*) The phrase **षट्द्विकपञ्चाद्रि** can also admit of more than one meaning. I consulted the Sanskrit Dictionaries and also Pandits of local Sanskrit College. Most of them told me that the word **द्विक** means 'a pair' and not the number 'two'. One of them has also suggested that **द्विक** may mean "a square". According to these three different meanings the phrase can be rendered as 2526, 2566 and 2536.

(*c*) This year number has to be added to the current Saka year. It is not known what Saka era was meant by Varaha.

ब्राह्मणास्तथा ॥

*क्रतु means a sacrifice. It is also the meaning of a **मानसपुत्र** of God Brahma. (See M.B.).

INFLUENCE OF PLANETARY COLOURS ON RACING

(Continued from page 114)

with owner's racing colours at Calcutta Race Course. They are as follows:—

When the Planets aspect on the Signs the Colours are:

Planet aspecting	*Aries*	*Taurus*	*Gemini*	*Cancer*	*Leo*	*Virgo*
Sun	Scarlet	Grey	Gold	Rose and prim-rose	Orange	...
Moon	...	...	...	White	...	...
Mars	Red	Claret	...	Pink	...	...
Mercury	...	Light green	Yellow	Canary	...	Gold
Jupiter	Violet	...	Dark green	...	Lilac	...
Venus	Claret	Pale blue	Light green	...	Grey	...
Saturn	Light shade of Chocolate	...	...	...	...	...

Planet aspecting	*Libra*	*Scorpio*	*Sagittarius*	*Capricorn*	*Aquarius*	*Pisces*
Sun	Grey	Cerise	Lavender	...	Lilac	...
Moon	...	...	...	...	...	White
Mars	Claret	Deep red	Violet	Chocolate	Purple	...
Mercury	Light green	...	Green	...	Dark green	Canary
Jupiter	...	Purple	Blue	...	Dark blue	...
Venus	Pale blue	Claret	...	...	...	...
Saturn	...	Chocolate	...	Black	...	...

I have already explained about the formation of the colour brown in my previous example. Here, I mention about the making of the colour peacock blue. It is formed when the two planets Jupiter and Mercury simultaneously aspect either on the sign Taurus or Libra or Sagittarius. The colour is perfect on Taurus and Libra, but the winner open comes, when they aspect on Sagittarius. The reason for this will be explained in my next article. Now, I may be allowed to advise with confidence to my readers that these colours can be accepted as self evident truths in the selection of winning colours. Because, they are based on verifications and observations for decades in this field of research on planetary colours. Though the list is incomplete in the sense that the colour productions of all the signs of the zodiac have not been tabled here, it can be solved and completed with a little bit of practice and imagination. Take the instance of Sun from our list and let us try to fill up the blanks on Virgo, Capricorn and Pisces. We find the colours like this: Sun on Virgo—A higher shade of gold; on Capricorn—A hotch-potch shade of black, but still black is prominent; on Pisces—A shade of prim-rose and rose—the remaining six planets can similarly be tried. But one should not be too zealous to put them hurriedly into practice, unless and until he is sure by repeated observations and verifications that the colours can safely be used in the selection of winning colours. Then only they can put two and two together to make four.

Before I conclude this article, I issue a note of caution. To achieve cent per cent success in the selection of winners *one must be conversant with the inner meaning of the strength of a planet, so as to be prominent in a race chart*. It is unlike our ordinary mode of ascertaining that a planet gains in strength when just on the cusps of the four major angles, namely, the Ascendant, the Descendant, the Meridian and the Nadir; or otherwise, prominently placed in the houses of the zodiac; such as in the 5th house.

Similarly, *aspects whether benefic or evil, applying or separating, have a different denotation and connotation* like the strength of a planet.

THE RIDDLE ABOUT A WELL-KNOWN VERSE OF VARAHAMIHIRA

(Continued from page 115)

I will, therefore, attempt to discuss these points one by one and will request readers to their views as to how far I have succeeded in making an impartial and rational approach to the problem.

III

What is the "Garga Samhita"?

A Samhita work generally deals with the following subjects :—(*a*) Practical Astronomy, including motions of planets, their heliacal rise and set, eclipses, etc; (*b*) Their effects on human life; (*c*) The geographical divisions of the earth and distribution of regions in classes (Varga)[4] according to the three groups of 27 nakshatras who are supposed to exercise a control over their destinies. There is absolutely no doubt that such Samhita works were actually compiled by the first grade sages like old Garga, Parasara, Devala and others in the time of Mahabharata and these were preserved in their original or modified form even upto the time of Varaha, who has quoted them at length throughout his bulky work the *Brihat Samhita*.

I attempted to procure a copy of the *Garga Samhita* in which I expected to find all the above five verses. I could get a *Garga Samhita* in the Library of the local premier institution of Sanskrit lore at Indore, *viz.*, the Sanskrit Mahavidyalaya, and I was surprised to find that unlike a standard Samhita work, it was simply a work describing the life of Lord Sri Krishna. I reluctantly read the whole of it and I am glad to say that I did get in it some clues for the correct interpretation of the verse in question.

The said *Garga Samhita* as it stands today, starts explaining the purpose of writing the work. It says that a certain King Pratibahu,[5] son of King Vajra of Mathura, performed a number of sacrifices, with a desire to get a son, but he could get none. He was, thereupon, recommended to read the story of Lord Sri Krishna as described by Sage Garga, primarily intended for the fulfilment of one's desires.

As we proceed further, we come to Chapters 49 and 50, from Part VII[6] and Chapter 7, Part X in which it has described how Sage Narada explained to King Ugrasena that it was very difficult to perform a horse sacrifice, that this was performed only by King Yudhisthira before, and that it could be done if sage Garga is again requested to accept the high office of Priest-in-chief, as was done by him in a similar occasion (*viz.*, Rajasuya sacrifice) before.

From these verses, one can easily infer that,—

(1) A sacrifice was performed by King Ugrasena after such a sacrifice had already been performed by King Yudhisthira *at the end of Dwapara Yuga.*

(2) Ugrasena lived in the period *between the Kali and Dwapara Ages,* and that his second sacrifice was performed *when King Yudhisthira was ruling.*

(3) Garga was the most competent sage to occupy the office of acting as Priest-in-chief in such a grand sacrifice, and his name appears to be closely associated with sacrifices, right from the time of King Ugrasena down to that of King Pratibahu of Mathura.

The last verses of the last chapter (*viz.*, 20 and 21), describe (of course in future tense) how the following six kings were to be the "fixers of Saka eras"[7] (शकबन्धिनः) of whom Yudhisthira was the only king already born and others were yet to live (see verse No. 22).

From these verses one can easily conclude that there may have been two or three sages named 'Garga'. The oldest one may have been the contemporary of Lord Sri Krishna, Ugrasena, Bhishma, Yudhisthira and others. The second[8] Garga (II) may have lived before King Vikrama and others were born and the third Garga (the writer of the present *Garga Samhita*) may have lived after these kings had promulgated their respective eras.

IV

The Vriddha Garga's Five Verses Quoted by Varaha

When these verses are read together, they clearly appear to be a part of the description of some sacrifice performed by some king, during the reign of King Yudhisthira. They show that Munis[9] (and not Rishis) were given the office of looking after the welfare of different communities living in different regions and some of the Munis were given the special duty of inspecting the work of well-read Brahmins engaged in the sacrifice. The names of Munis occurring in these verses are seven, *viz., Mareechi, Vasistha, Atri, Angirasa, Pulastya, Pulah* and *Kratu*. The seven sages, commonly known as Saptarshis and whose names are given

[8] The astronomer Garga, often referred to by Varaha as Vriddha Garga, appears to have lived in an age in which the heliacal rise of Agasthya (star Canopus) was associated with Sun's entry into the constellation of Hasta.

cf. दृश्यते स किल हस्तगतेऽर्के ।

[9] The *Garga Samhita* itself differentiates between the words Rishis Munis, Dwijas, etc., as can be seen from the line ऋषयोमुनयो द्विजाः occurring in verse 4, Chap. 49, Part VII. The Mahabharata quotes six of these names as those of Brahma's मानसपुत्रा's. (See *Adiparva*, Chap. 61).

to the seven stars of the constellation of Great Bear, are :—

Kashyapa, Atri, Bharadwaja, Vishwamitra, Gautama, Jamadagni and *Vasistha*. According to Mahabharata (Chap. 165, Anusasan), these sages were professional performers of sacrifices and acted as Priests-in-chief. Readers can now agree with me in the fact that the word *Munayo* as used by old sage Garga should not be translated as Saptarshis or even as Rishis, but as Munis in human form.

V

The word "Pitri Daivatam"

Scholars are tempted to translate, like Varaha, this word as the star Magha. Readers of Mahabharata will not fail to notice the important fact that whenever a reference to a particular star, a particular tithi or to a particular nakshatra, has to be made, it is to be made in terms of the controlling deity, this being invariably accompanied by the term, Muhurtha, tithi or nakshatra, *e.g.*, **मुहूर्तेऽभिजिताख्ये** (*i.e.*, on the 8th Muhurtha named Abhijit); **प्रजापत्येहिनक्षत्रे** (on the nakshatra whose deity was *Prajapati*); **शक्रदेवतां अमावास्यां** (on that Amavasya day, of which the deity was Indra). It is also to be noted that the word is used in the accusative case and not in locative for showing a place or a position like the words **गच्छे, धाव,** etc., showing motion, this word is intransitive, it cannot have any object (**कर्म**) and cannot have a word in the accusative to show a position, as is done with **गत्यर्थ** verbs. The **स्थिति** or occupation is spoken about *Munayo* who are devoted to religion (**धर्मनिरताः**) and devoted to the welfare of people. *Munayo*, here, clearly stands for human beings. How can human beings be spoken of as "occupying a position in the star Magha?"

In my opinion, *Pitridaivatam* does not stand for any star, but for some "grand, old, venerable or respected father." In the absence of any context it is very difficult to tell as to whom it refers. It may be referring to grand old Bhishma[10] or to old Ugrasena, or to some respectable person who was the father of some king to whom the reporter is shown as describing some sacrifice. A father used to be referred to Pitri Deva[11] in the Vedic and Mahabharata times. A search for these verses has to be made in all the works known as *Garga Samhita*.

The *Brihat Samhita* abounds in quotations from Garga and by old Garga also. These show what a great genius and astronomer, the old sage Garga was. He appears to have remained a keen observer of astronomical and natural phenomena, and hence,

(*Continued on page 122*)

[10] cf. the references showing that Bhishma was the father of Dhritarashtra:

अतीव शुशुभे राजन् पितातेपूर्णचन्द्रवत्
एवं भूतस्तवपिताशरैः विशकलीकृतः
हतमेवाहि पश्यामि गांगेये पितरं रणे
अद्याहंनिहतं श्रुत्वा पितरं.....

Some Observations on Kaka Bhujandar Nadi

BY K. V. VENKATARAMANAN

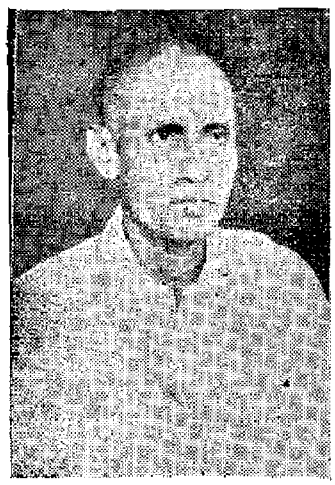
ALTHOUGH the name of Kaka Bhujandar Nadi may ring familiar to the readers of THE ASTROLOGICAL MAGAZINE, yet its real importance cannot be appreciated in full unless one is gifted with keen intellect and intuitive faculty to sift truth from the archaic language, esoteric and allegoric style, not to say, poetic exaggerations abounding in that hoary work which is, indeed, a vast ocean containing within its depths rich treasures of knowledge not only on Astrology and Astronomy, but also on Religion and Science. It gives a clear and correct perspective to understand and appreciate our ancient Puranas and Ithihasas which, grotesque though they may appear to the lay public, are in fact invaluable spiritual truths and describe historic events and personalities that repeat themselves in cycles of Time.

It is really amazing to note in the ancient Nadies written several thousands of years ago references to the appearance of the Russian artificial Moon in the year 5059 of Kali Yuga (*i.e.*, 1957 A.D.); the appearance of a comet followed by a sudden outbreak of a peculiar fever called "Flu" that swept all over the world; *the World War II*; the rise and fall of the white Man's Rule in the world; Darwin's theory and other scientific advances like cinema, telephone, telegraph, the discovery of new planets, etc.; the birth and glory of Prophets like Jesus Christ and Mohammed.

As an instance in point, I may mention an interesting fact, namely, that I have now come across some astrological verses in Tamil stated to have been inscribed on stone in Tanjore temple. They give the date, month, week-day, thithi and the star on which the Kali Yuga commenced and the major dynasties that will rule therefrom. Beginning from King Parikshit, they refer among other things to Vikramaditya, Salivahana, Appaji Royar, Muslims, Queen Victoria and the end of the British rule, yielding place to two Governments under the names of *Needhan* and *Vizhian*. After 12 years hence the verses foreshadow epoch-making changes, followed by a long and beneficient reign called *Ramakalai* based on Vedic faith.

The changes adumbrated in the verses may happen in view of the *Golaka Yoga* that will occur in February 1962 arising out of the rare combination of 8 planets in Makara Rasi. According to Sastras, Golaka Yoga will work out in full only if the combination takes place in one and the same degree. But the Golaka Yoga of 1962 is not such a complete and powerful one.

The Nadi contains horoscopes of Buddha, Sankara, Jesus Christ, Prophet Mohammed, Ramakrishna Parama Hamsa, etc. But it is difficult to identify whether they belong to the present, past or future cycle, as the available *Nadi Granthas* are said to be fragments belonging to different cycles bearing the same name, all compiled and pieced together by latter-day astrologers. In this connection, the following extract from the



K. V. VENKATARAMANAN

preface to the *Saptarishi Nadi*, Volume III published by the Madras Government will make the point clear. Referring to the horoscopes in the volume, it says:

"It is difficult to say whether the horoscopes in it refer to the current cycle or to the coming cycle when the planetary positions may come to the same place some ten thousands of years later. I have to say this, as I found in the Kausika Nadi (dialogue between Vasistha and Viswamitra) the 7th Bhava for a girl. In it not only the current planetary positions were given but also the names of her parents and also the girl's pet name. As I found the results given there were wrong, I requested the astrologer to search further. I was surprised at what I found on the 16th December 1949 and I have given these verses in the Tamil preface. Again, not only the correct planetary positions were given but also the names as before and even referred to my having seen the previous reading. Further, it is said that the previous reading did not belong to the girl born in Kali 5032 (*i.e.*, A.D. 1931 Prajotpatti) but to a girl going to be born tens of thousands of years later in the next cycle. This indicates that a person (unless one attains salvation) will take birth with the same name and environment when the planets again come to the same position. Perhaps, this cycle may be a Yuga. Learned men say that in every Tretha Yuga the incarnation of Sri Rama will take place, and all the incidents as detailed in Ramayana will repeat with perhaps some minor changes." This accounts for the different Ramayanas like Valmiki, Adhyatma, Ananda, Gayathri, Tulsidas, etc., as each deals with life of Rama as led in the particular cycle concerned.

Kaka Bhujandar has expounded the theory of *the origin of species* long before Darwin. The Nadi observes in one of its verses that the worm after a large number of births evolves into monkey and next into man after 9 crores of births.

Bhujandar in another verse provides the key to understand aright the Ramayana which describes not only the incarnation of Rama that takes place in every Tretha Yuga, but also illustrates allegorically spiritual truths. Bhujandar says elsewhere that the worm after crores of birth takes the form of a monkey and in the next becomes a man who after devotion to God and Yogic practice attains spiritual salvation. This is the story of Ramayana. Rama represents *Atma* otherwise called *I*, the Greater Ego. This is also evident from the word *Atma Rama* by which some Hindus name their children.

The same truth is also expounded by Adi Sankaracharya in his work called *Atmabodham* wherein he has identified Rama with *Atma* and Sita with *Shanthi* or calmness, the Rakshasas with Rag and Dwesha (passion and hatred).

Sri Vedanta Desikar, the great Vaishnavite saint of Tamil Nad in his *Sankalpa Suryodhyam* identified Sita with the soul, Hanuman with Guru and Ravana with the mind as the head of ten senses. All these clearly stress the truth that Ramayana

has both esoteric and exoteric meanings.

Similarly, the ten Avathars of Vishnu called Dasavathar not only describe the ten major incarnations of God that take place in every cycle or Kalpa but also illustrate the ten important stages of a yogi from the time of conception in his mother's womb to the attainment of Moksha after death through the normal course by observing the scriptural injunctions. This normal course of salvation is called *Krama Mukthi* as distinguished by *Jeevan Mukthi* which denotes the kind of salvation here and now while living in this physical body.

Ancient sages who were astrologers anticipated the birth of Christ. As soon as he was born, three wise men called Magis came to the birth place guided by an unusual star and offered worship to the divine child. Who were the Magis who came from the East? The Bible is silent on this point. But Hindu scholars opine that they were astrologer-saints of whom *Raja Martanda* describes as "*Martando, Mandato, Garga, Parasarastha Bhrigu, Santano-Achirat Gauhu Sakadvipa tato Munih.*" They were also called Magas whom Bhavishya, Sambu and Vishnu Puranas extol as the best Brahmins. But they were not Iranian priests as confounded by some scholars. They are said to have lived in Sakadvipa, a region lying somewhere in the Arabian Sea near the West Coast of India which went under water along with a big continent called Lemuria during a minor Pralaya or Deluge.

South India was then called Jambudvipa considered by scholars as the oldest part of the earth from which civilization spread to the other parts of the world at one time.

Referring to the holy hill of Arunachala in Tamil Nad, Paul Brunton observed thus: "Both tradition and geological evidence point to the fact that the hill existed long before the Himalayas sprang up. That is the verdict of an American geologist who went further and made it contemporaneous with the formation of the very crust of the earth itself. It is indeed a remnant of the sunken continent of Lemuria".

There is an ancient astrological saying that "when there is sunrise in Lanka, it is midnoon at Yamakotipuri, sunset at Siddhapuri and midnight at Rome". This shows that our ancients had a perfect knowledge of world geography and took four cardinal points in the world for their astronomical calculations. Perhaps, this may be the basis for the time-honoured practice of the western countries to begin the date from midnight. Yamakotipuri and Siddhapuri might have gone under water. It is evident from the above fact that Indians knew of Rome even before recorded history. It was known to our ancients as the abode of a sage called Roma Rishi who is credited with the authorship of a work on *Astro-Palmistry* in Tamil. Sanskrit scholars assert that there is reference to Roma in Rig Veda.

America was known to ancient Indians long before Columbus. Kamakoti Sankaracharya in one of his lectures said that California was a corruption of the world *Kapilaranyam* the abode of sage Kapila which is allegorically described by our Puranas as being located in Pathala Loka in the sense that it was on the opposite side of our country on the other side of the globe. Sir C. P. Ramaswamy Iyer, after his return from his American tour delivered a lecture on "Indian Influence in America" wherein he said that temples in Mexico were modelled on the South Indian temples and one of the royal dynasties of Peru were called Aiyars!

Vestiges of Indian influences are found all over the world. The ancient town of Viipuri in Finland is said to be a corruption of the Tamil word Viyapuri meaning God Murugan whose cult is said to have prevailed in the West at one time. Pyramids in Egypt are said to be the headquarters of immortal Dattatreya who in his invisible form daily goes round the world visiting Banaras at noon for worship.

In one of the previous issues of THE ASTROLOGICAL MAGAZINE, I quoted the statement of a North Indian scholar according to whom there was reference in *Bhavishya Purana* of Adi Sankara having visited Macca with Ganges water and performed Tulasi Puja, knowing beforehand that it would be the birth place of Prophet Mohammed, the last of the divine incarnations. Perhaps, this account may deal with the life of Sankara of a different Kalpa. All these clearly show on that ancient Indians were large-hearted and cosmopolitan in their outlook.

Kaka Bhujandar knew the precession of equinoxes and new planets which the modern scientists are yet to know. If the Parasari system of astrology attaches much value only to the 9 planets, it is because all other planets are children of the major nine known as Navagrahas. The Western system of Astrology is after all an offshoot of the Tajaka system of the Hindus and the Western system of primary and secondary, solar and lunar directions have their roots in the Hindu system which enumerates as many as 42 directions, although the Vimshottari system is considered to be the best in Kali Yuga.

Nadis give directions on the basis of one year, 3 years, etc. The one year direction of the Nadi is the Primary Direction of the West. The Secondary Direction of the West is based on the Hindu conception of human year and Deva year (*i.e.*, one year is a day to the Devas). Hindus have several other Dasas like Varshika Dasa, Masa Dasa (monthly direction), Dine Dasa (daily directions), etc.

According to Nadis, Vimshottari Dasa is based on a scientific basis commencing from the star Krittika, which is said to contain the root of the creative seed called Moola Prakrithi. Alcyone, the brightest in the group of stars is also nearby. It is the centre round which our visible Sun revolves taking a period of 25 crores of years for a complete revolution. Our visible Sun is said to be a reflection of the great Sun into which is seated God, the Para Brahman shining like crores of Suns. Innumerable solar systems are revolving in the sky all round God seated in Mount Meru. The Pleiades and other Krittika group are the sources through which divine power known as Para Sakthi involve and evolve. Krittika star is a group of 6 who are said to be the maidens who nursed God. Subramanya is called the embodiment of Sakthi or Power. Since Krittika is the root of Sakthi, Subramanya, son of Para Sakthi is said to be nursed by the maidens of Krittika. Subramanya by his association with Krittika was able to undertake the creation of the world by imprisoning Brahma. Hence prayer to God Subramanya on Krittika day is considered highly efficacious. Great many are the souls who from humble beginnings are rocketted to fame and fortune by the observance of Krittika Vritham. Another star in the group, Alcyone called Anusuya, the wife of Atri, is known for her high chastity. It is also a potent source of radiating divine power. Her tremendous power is mythologically described as having changed the three gods—Brahma, Vishnu and Siva into children. Another star in the group, called Arundhati, the wife of Vasistha, is an ideal wife. That is why sastras enjoin the bride to see the star Arundhati at the time of marriage so as to acquire the blessings of married life. Eye is the most powerful organ for involving and evolving divine power. By seeing

the star with a true and prayerful spirit, the star Arundhathi can radiate her beneficent influence to her gazer. That is why the great saintly poetess Avvai of Tamil Nad said that it is bad to see bad people, and good to see noble people. We know the malefic influence of Drishti Dosha, the power of an evil eye. Even so are the sight of great saints which removes all sins and confer blessings. Similarly, we pray for Lakshmi Kataksham (the glance of the Goddess) for our good. This accounts for the Vimshottari Dasa commencing from the star of Krittika beyond which God, the great Sun exists. Such are the inexhaustible mines of astrological information contained in Kaka Bhujandar Nadi which is one of the earliest Nadi works comprehending all knowledge of Time and Space.

But how many know the life of the wonderful author of Kaka Bhujandar Nadi. Here are interesting details culled from different sources. Kaka Bhujandar was a great sage who attained immortality even while he was living in his physical body by devotion to Rama. He gives his autobiography tracing his life through several births. In a certain Kali Yuga, Bhujandar was born in Ayodhya, the capital of Sri Rama, in a class of slaves. He became a devotee of God Siva. But puffed up with the pride of wealth, he hated other Gods especially Vishnu. A great famine having broken in Ayodhya, he went to Ujjain where he earned much wealth and practised devotion to Siva, hating Vishnu. At last he approached a Guru who was a saintly Brahmin and prayed to him to teach all the modes of worshipping Siva. The Guru taught all he wanted. The broad-minded Guru worshipped all Gods with equal reverence. But Bhujandar did not like his Guru praising Vishnu. But the Guru tried his level best by advice to rectify his aversion to Hari which would spell ruin to him. But the haughty disciple did not heed. One day while he was sitting in a temple, his Guru passed by when he did not stand up and respect the preceptor duly. Though the Guru never noticed, Siva who would not tolerate any insult to his devotees, at once cursed the slave to suffer by taking myriad births in brute creation.

But the Guru in his compassion to his disciple prayed to Siva to forgive the sinner. The God gratified the wish of his devotee by amending the curse that even though he took thousand births, the pain and suffering of births and deaths would not affect him. By virtue of having taken birth in Ayodhya, he would cherish for ever devotion to Rama and remember all his previous births. Further he would have the power of going anywhere and everywhere without let or hindrance.

Thus turned into a snake, he moved to the Vindhya Mountain and lived there taking thousand births without any pain or suffering caused to ordinary mortals and passed through the brute creation by the grace of Siva and his Guru. At last, he was born in a Brahmin family. When he grew into a boy, his father gave him lessons pertaining to his caste. But his mind was so absorbed with the Lotus Feet of Sri Rama, that he cared for nothing in the world. After the death of his parents, he repaired to the forest moving like a wind anywhere and everywhere hearing Hari's glory. Seeing the sage Lomasa sitting under the shade of a tree, he fell at his feet and begged of him to teach him how to worship the incarnate God Rama. The sage, after giving a brief discourse, began to expound the highest state of God, namely Nirguna Brahman. But Bhujandar not being so advanced as his Master could not appreciate the sermon. Thereupon, he asked his master again and again to teach him Saguna Brahman, namely, the personal God Rama. As he went on worrying him at every turn, even the meek and mild sage flew into a rage and said, "You wretch! You suspect everything like a crow. Be turned into a crow."

The disciple was at once changed into a crow. But he was not affected by the change, for his heart was attached to the feet of Rama. Now his Guru's anger was changed into ocean of mercy. Much wonderstruck at his pupil's steadfast devotion to Rama, embraced him and taught all the secret mantras for worshipping Rama. Now the divine crow's heart became full with beatitude. The Guru blessed him saying that by the blessings of Rama he will attain everything at will. Just then God Brahma Himself said, "Oh, wisest sage, all your noble words will come to pass".

Then the divine crow returned to his abode in the forest and spent all his time uttering the glory of Rama. All the birds in the forest came there and drank the nectar of devotion to Rama and attained high state. In this way, he passed away 27 cycles or Chathur Yugas. Although he could leave his body at will, he did not give up for long ages the body of the crow for which he had a special fascination, for in that body he had the highest good fortune of getting vision of Sri Rama. Whenever Vishnu incarnated as Rama in every Tretha Yuga, he went to Ayodhya and enjoyed the youthful play of Rama.

By the grace of Rama he attained the highest knowledge. God Brahma himself taught Bhujandar all the secrets of astrology.

He was known as Kaka Bhujandar, because he attained the state of *Jeevanmukthi* in body of the crow which is called "Kakai" in Tamil. He was also called Kaka Bushandi. He wrote a monumental work in astrology called Kaka Bhujandar Nadi.

As years rolled by, some aberrations had crept in due to the long lapse of time. So he reincarnated himself in South India in a Brahmin family and corrected his Nadi and entrusted it to the custody of the then ruler of the country for his use for 3000 years later. Even though he reincarnated as a Brahmin, he took the name of the crow by calling himself Kakaiyar meaning in Tamil "Crow Brahmin". Such was his peculiar fascination for the body of the crow in which he attained the highest state of Godhood by devotion to Sri Rama.

The story also occurs with slight modifications in Tulsi Das Ramayana which was the version taught by Sage Yagnavalkya to Rishi Bharadwaja at the latter's request at the holy Prayag in the month of Magha.

Such is the sublime greatness and wonderful glory of Kaka Bhujandar Nadi. May Sri Rama bless the learned Editor of THE ASTROLOGICAL MAGAZINE with long life, health, wealth and happiness to serve the divine cause of astrology.

GRAVITATIONAL FORCE

Einstein's Theory Challenged

Dr. L. I. Schiff, a scientist of Stanford University, has challenged Einstein's Theory of Gravitation in a report he submitted to the National Academy of Sciences. He suggested that gravitational force may come from the constant interchange of the minute weightless particles called neutrons.

The Gravitational Theory advanced by Einstein does not involve any interchange of matter between different objects, but attributes gravity largely to geometrical properties of space, in which smaller moving bodies are pulled towards larger ones.

Dr. Schiff said that his theory was supported by some experimental evidence, but it was too early to say whether it would hold up.

THE RIDDLE ABOUT A WELL-KNOWN VERSE OF VARAHAMIHIRA

(Continued from page 118)

a rational thinker will not be prepared to believe that the sage would have assigned an unnatural motion to fixed stars.

VI

The Myth about the word 'Saka'

People generally interpret the word 'Saka' as the Salivahan era. Varaha, in preparing the formula for finding the year in question in terms of the Yudhisthira Saka had some definite era in his mind. It is not known what era was in use in the time of Garga III. History shows that there was nowhere in the world any system of counting years in terms of eras before the year 747 B.C. The following five eras were known upto the 2nd century A.D. :

Nabu Nazir's era, starting from			747 B.C.
Selucidan	,,	,,	312 ,,
Parthian	,,	,,	248 ,,
Vikram	,,	,,	57 ,,
Salivahan	,,	,,	78 A.D.

Jatakabharan, a notable work, is supposed to have been compiled in the 5th century A.D. This work adopts *Saka 445 as the epochal year* for finding Ayanamsa. I will now show that according to the author of this work himself, the word 'Saka' stood for a year belonging to the Vikram's era. The following verses could be stated in support of my arguments.

येनास्मिन् वसुधातले शकगणान् सर्वान्
दिशः संगरे ॥
हत्वा पंचनवप्रमान् कलियुगे शाकः
प्रवृत्तिः कृता ।
श्रीमत् विक्रमभूभुजा.....

—Verse 13, last Chapter

त्रिकेन्दुभिर्विक्रमभूपतेर्मिते शाकेन्वितीह-
क्षयमासकोभवेत् ॥

—Verse 53, Chapter 9

These verses clearly show that,—
(1) King Vikrama started an era after defeating the armies of Sakas.
(2) The suppressed month is obtained by..... (according to the author) *in terms of Vikram era.*

The *Romaka Siddhanta* adopts *Saka 427 as the epochal year.* All scholars regard this as the year belonging to the Salivahana era ; but they are unable to explain why the 1st lunar day of the Chaitra in that Saka year does not prove to be a Monday [12] or Tuesday.

One day, I just tried to find out the weekday on the 1st lunar day of Chaitra in Vikram Samvat 427, and I was surprised to see that it was a Monday. These lead me to suspect that, perhaps, before the age of Varaha, the astronomers used to adopt the Vikram era as the standard Saka era.

Saka = era started by	*Dwika=two plus 2526*	*Dwika=pair 2566*	*Dwika=square 2536*
Nabu Nazir in 747 B.C.	3273 B.C.	3313 B.C.	3283 B.C.
Selucidan 312 ,,	2838 ,,	2878 ,,	2848
Parthian 248 ,,	2774 ,,	2814 ,,	2784 *
Vikram 57 ,,	2583 ,,	2623 ,,	2593
Salivahan 78 A.D.	2448 ,,	2488 ,,	2458

Taking into consideration all possible years denoted by the word 'Saka' and by षट्द्विकपञ्चद्वि, we get the following figures as the possible years of King Yudhisthira's accession to throne which took place twice in his lifetime, the first one being about 20 years before the Bharat Battle.

CONCLUSION

My conclusions, therefore, are as follows :—

(1) The word *Munayo* has been used by old sage Garga to denote *living human beings* (sages) and not the seven stars as understood by Varaha.

(2) Varaha has committed an error in interpreting the word 'Pitridaivatam' as the star Magha, and also in assuming an unnatural motion for stars among the constellations.

(3) The word 'Saka Kalah' refers to *some era current in the time of Garga.* It may be any one of the three eras which were in vogue before Vikram's era, since Garga states in his Samhita that only one king out of six promulgators of eras had lived and that others are yet to be born.

(4) I am afraid, the expression षट्द्विकपञ्चद्वि may prove to be a variation and so also other words. A search for correct words has to be made. It is my conjecture that मघासु

[12] सप्ताश्विवेदसख्यं शककालमपास्य
चैत्र शुक्लादौ
अर्धास्तमिते भानौ यवनपुरे सोम
(or भौम) दिवासद्ये ॥

—Romaka Sid.

nay prove to be मखेषु हन्युः may be निन्युः and स्थिताः may be स्थित. It is very necessary to find out the oldest possible *Garga Samhita* for this.

(5) The word 'Saka' did not necessarily stand for the Salivahan era. It is a Sanskrit synonym for the word 'era'.

* The popularly believed year, *viz.*, 3101 B.C. is far different from any of the above figures and should not be accepted.

The year 2786 B.C. found by me on purely astronomical data resembles at least one of the figures.

BANGALORE-3

Astrology and Its Practical Application

BY I. AGHORAPATI, B.A., B.ED.

THE four primordial elements of nature—fire, earth, air and water together form the Bhachakra known as the zodiac. Such four-fold division assigns three signs under each element. Mesha, Simha and Dhanus form fiery triplicity; Makara and its trines earthy triplicity; Thula and its trines airy triplicity; and the rest watery triplicity. In our daily Sandyavandanam we utter the names of these elements and offer oblations *Prithivyapastejo Vayurakasat. Om Namobhagavatae Vasudevaya.* Well-integrated personalities have their planets well distributed among the signs. Greek philosophers constructed a thesis that the entire man consisted of the interweaving of the four categories into one of which can be placed every human activity. Thus the moral concept of man comes under fire, the physical activity under earth, the intellectual pursuit under air, and the aesthetic under water. Houses which comprise several aspects of an individual in his present birth form into four groups. The first, fifth and the ninth representing body, soul and spirit form the Trinity of Life; second, sixth and tenth representing possessions, comforts such as food, clothing, health and servants and the honour and public standing form the Trinity of Wealth; the third, seventh and eleventh corresponding to ties of consanguinity, ties of conjugality and ties of friendship together form the Trinity of Association. The remaining three, fourth, eighth and twelfth—the terminal houses-form the Trinity of Psychism.

Man acts by his unique plasticity of intelligence and animal by instinct. Intelligence is ruled by the 3rd house and the airy triplicity. The intelligence gathered by the third is sifted and weighed in the sign of balance (Thula) and transmuted into knowledge or Vignana in the eleventh (Kumbha). Among the several derivatives of the third bhava, I shall take up a few. According to Mr. Carter "education comes under this". Indians refer to 'Kundalmulu' (jewels for the ears) the right one ruled by the third and left one by the eleventh. Our Pandits, Kavulu (poets) and Mahamahopadhyayas in olden days were presented and decorated with these Kundalmulu by their patrons and kings as a tribute to their erudition, scholarship and *advitiya pratibha.* In the present day context they represent degrees B.A.,M.Sc., Ph.D., etc. Courage is another concept of this house. It means prowess and mastery in several languages and subjects of study—in short competitive examinations. In olden days and even now, we have *Astavadhanas, Satavadhanas* and *Vak-Vivadas.* Did not we hear of Srinatha breaking the 'Kanchu Dhakka' of Goudi Dindimabhat in Krishna Raya Asthana in a poetical contest? Think of the famous duel between our great Adi Sankara and Mandana Misra and the final victory scored by Sri Sankara in the exposition of several sastras. A third house having well situated planets and well aspected bestows good education and academic qualifications. Of the seven graduate teachers of a school five have strong planets in the third; Moon in two cases well aspected; Jupiter in the other three well aspected. In my brother-in-law's horoscope he has Mercury and Jupiter in the third and they receive the square aspect of Saturn. He had breaks in education and is now studying B.Sc. and Saturn's transit over the two is about to occur in a few months! His sister has Jupiter and Venus together aspecting her third house from the ninth. Both are squared by Saturn from the twelfth. When she sat for B.A. examination in March 1957 and July 1957, Saturn was transitting this Jupiter-Venus combination. She was having Venus (ruling her 3rd and 8th bhavas) antar in Moon. No wonder she failed twice much to the surprise of her lecturers. On the day of the announcement of results (May 15) the Moon was transitting Jupiter and Venus along with Saturn. In March last when there was no more that evil transit she passed in Venus antar itself. One of the two famous 'Tirupathi Venkata Kavulu' whose unrivalled Kavitapratibha permeats the whole of Andhra Desa has Mithuna (3rd) as Lagna with Venus and Jupiter rising. This is sufficient evidence. The true significance of the fourth is *Atmavidya* (science of the soul). Purana Sravanam (hearing Puranas) is ruled by the third house. In the present day its place is usurped by the newspaper and it has become the part and parcel of the daily routine. As this house rules all communications such as railways, telegraphs and telephones, accidents might be judged. I had a little funny accident when Mars in transit passed exactly over my radical Moon posited in the third house.

The pivot of this Trinity of Association is the seventh house. In a national chart, it rules the foreign policy and the pacts entered into. All contracts including marriage, whether legal or otherwise come under this. Present international policies and pacts done with the best of intentions (?) lead to war. War has come to stay with man. Man in his art of living with his neighbours (3rd house) displays two opposite policies. On the one hand, he acts by the instinct of love, sympathy and solidarity and on the other his heritage of aggressiveness, greed and brutality come to the fore resulting in conflicts. In between these two he is pulled hither and tither. He plays Dr. Jekyll at one time and Mr. Hyde at other times. Philosophers trace the causes of war to man himself (his very nature), economists to inequalities and biologists to the inadequate growth of man's social behaviour. Let us examine each one. Radhakrishnan, the moral philosopher says, "Wars do not occur as acts of God, they are made by man and the training they receive". The truth of it is partial for B. V. Raman says, "Nations have become entangled in a degenerating cycle of wars that breed more wars and these degenerating cycles of war as a discerning student of astrology knows are rhythmic, *i.e.*, astrological in character". There are certain planetary patterns under whose influence he resorts to war. The possibility of a great conflict arising out of the coming eight-planet combination in Makara is hinted at by our Editor (in 1962). The claims of astrology or its advocates have the support of the scientists. The sunspot cycles are nine maximum periods in a century. Political conditions, maximum tensions, revolutions, insurrections follow this cycle. There is a close relation between historical events and astronomical cycles. Chin Dynasty as well as Sur Dynasty lasted about 800 years each. Once in 19.859 years, Saturn conjuncts Jupiter and forty such conjunctions make up 800 years. Saturn conjuncts Uranus in 45 years and opposes once in 22.68 years which is the basic period of solar radiation. 1692 Saturn opposition Herschel—Britain's Glorious Revolution plus 45 years=1736 (nearly) Saturn opposition Herschel is the year of war of Polish succession and carrying on the addition of 45 we come to 1962 the year when Saturn

again opposes Uranus. This tallies with the Editor's above warning. (See "Planets and the Third World War" in August 1957 issue of THE ASTROLOGICAL MAGAZINE). The cycles of Saturn-Rahu conjunction in Scorpio in 1956 and Jupiter-Rahu conjunction in Thula in 1957 have started influencing the world. A survey of international events show considerable slump in moral standards and human conduct. A sort of depravity and intransigence seems to have gripped some of the nations. Britain is ruled by Mesha and these conjunctions fell in 8th and 7th (*Randhrasthana* and foreign policy). She started the disastrous war on Egypt and the whole world including herself denounced it. Her intransigence in her policy towards Cyprus mirrors the effects of Jupiter-Rahu conjunction. The various pacts—the N.A.T.O., S.E.A.T.O., Baghdad—are all the products of these vicious conjunctions. It is no wonder that each is failing miserably in its aims and objectives. The *muhurthas* for entering into such pacts befit the kind of collective destinies of those nations woven under the aegis of major degenerating conjunctions and eclipses.

Let us examine 'The Iraq-Jordan Federal Union (14th February 1958) and take up the horoscope of King Faisal of Iraq.

Sun	...	Mesha	17	12
Moon	...	Mesha	9	54
Mars	...	Kanya	13	40
Mercury	...	Mesha	23	8
Jupiter	...	Thula	25	26
Venus	...	Vrishabha	25	09
Saturn	...	Kumbha	14	17
Uranus	...	Mesha	8	03
Neptune	...	Simha	17	58
Pluto	...	Mithuna	29	57

No less than four planets Sun, Moon, Mercury and Uranus form a powerful destructive conjunction. It is aspected by Mars from Virgo and Saturn from Kumbha. Such an affliction of the lights by major malefics can nowhere be found. It must have been, as a result of the collective destiny of Iraq and its people that Faisal having such a horoscope portraying short life and fatal end should become the ruler. These birth promises were excited into action by the lunar eclipse of November 7, 1957 which took place in the 23rd degree of Mesha in exact conjunction with the natal Mercury. In the nativity Mercury is opposed by Jupiter. "Exaggerative, over-optimistic, apt to make mistakes and to be careless about mistakes." Did he not commit the fatal mistake of entering into the pact sponsored by Britain and America? Five months later in April 1958, a solar eclipse took place in the 8th degree of Aries over his natal sinister combination of Uranus, Sun and Moon. At the same time Rahu and Neptune were afflicting them by opposition. He could well have seen the celestial warning on the wall and refrained from entering into a pact so hastily in February. But the evil portends—astrological—in his horoscope were too heavy to bear.

Let us see how the time of signing the pact had opened the way for internal plot and insurrection resulting in his final assassination. Lagna is Kumbha, the natural eleventh rasi (acquaintances, friends and social relationships). Pluto, the planet of riots, plots and insurrection opposes it from the seventh house. The result could not but be insurrection. Did not our Rishis of yore lay it down as a rule that no planet, be he benefic or malefic, should occupy the 7th house in a marriage Muhurtha. Marriage is also a kind of pact. Its lord Saturn occupies a *Ganda Sandhi.* in an angle (I). Death of the pact was imminent. The Moon is besieged by Saturn and Mars. It is a stroke of *Balarista.* The crest jewel of the horoscope of the pact is the Uranus-Mercury opposition falling across Cancer and Capricorn, 6th and 12th houses. The sixth rules secret enemies and Uranus there shows what type of enemies they were—rebellious and frenzied. Mercury rules the fifth (Mantrasthana) and 8th (Ayusthana). What a mantra did the British (Mercury in Makara ruling the 10th from Aries ruling Britain) make this poor Faisal's chart keeping the dynamite (Uranus) opposing this Mercury! God's ways are mysterious.

The next question to be answered is what fruits do the partners reap from such a pact of their own doing. Super-impose the horoscope of one partner say Faisal on the horoscope of the pact. The Lagna of the pact is the 11th house from Faisal's satelletium in Mesha. So far 'Labha' is good. But it is labha pregnant with plots (Pluto opposes Lagna). The most dangerous and fatal Uranus-Mercury axis in the pact is at right angles to the Sun, Moon, Uranus conjunction in Faisal's map. The line through the centre of gravity of the opposition passes through the conjunction. Secret enemies of the pact. (Herschel in 6th). His own army men, assassinated him. Would it be wrong if we assume poor Faisal's Lagna somewhere between Aries 8th to 17th degree which stands in square aspect to Uranus (Cancer 14° 45') in the horoscope of the pact? Would any kind reader use the 'Prenatal Epoch' theory and fix the Lagna with the help of certain important events of his life? A good field of research is thus open to our brotherhood of astrologers. What an atom-bomb did poor Hussain let lose upon himself from the arsenal of his own Karma in entering into this pact! '*Yavaruchesina Karma Varanubhavinipako Yeri Kainanutappadanna* meaning that the doer of the act is himself the enjoyer of its fruits. If 'one impulse from the vernal wood may teach you more than all the ages can', one such astrological case from the astrologer's diary may teach the politicians more than what all their political theories teach mankind.

One ignorant of astrology may rise up and ask, 'Why did not Hussain die?' He was the other partner. His fate or his Karma is different. His horoscope is different from that of his partner. One can try the super-imposition method elaborated above. Sauce to a gander is poison to the goose.

Take India, the horoscope of the national Congress, the horoscopes of the two great leaders Gandhi and Nehru. India is ruled by Kanya. The sign ruling its foreign policy is Meena known for its selflessness, renunciation and altruism. This is exactly the Lagna of the Congress horoscope. Congress has really wedded itself to the principles mentioned above. A powerful Rajayoga combination of Moon, Jupiter and Mars occurring in Kanya is in the 7th house of the horoscope (its main policy). What else could that beautiful combination denote other than the policy of establishing 'Rama Rajya' in Kanya Rasi ruling India!

The opposition between Saturn in the 4th and Sun in the 10th from Lagna denotes poverty, squalor and misery in the home and a powerful adversary Sun (6th lord) in 10th representing the British. This opposition can be better understood when we recount the long travail and suffering and sacrifices that its leaders have undergone. It shows that the way was long and beset with failure and frustration. But for the 'Purvapunya' of this Bharatakanda (India), we could not have got leaders of the type of Gandhi and Nehru. Look at Gandhi's horoscope, his natal Sun is conjunct Moon in the Congress horoscope. The Congress mind and Gandhi's soul are one and the same. His Sun is in 12th house or of renunciation and emancipation and so he could bring about the political emancipation of the Indians. The

Astrology in Kerala

BY P. DAMODARAN NAIR, M.A., B.L.

ASTROLOGY had its flourishing foothold on Kerala from time immemorial. It has occupied a place of great importance in the day-to-day affairs of the people of Kerala and is considered essential for consultation on several occasions in the life of man. For every ceremony connected with birth, death and marriage, reference to astrology has become indispensable. For sowing seeds, harvesting crops, constructing buildings or shifting to new quarters, the advice of an astrologer is invariably sought for. The great temples and the festivals in them, fastings during Shashti, Ekadasi, Pradosham and the like, all have their close association with astrology. Hindus have abiding faith in it while persons of other religious faiths such as Mohammedans and Christians are also very much interested in and influenced by it. As soon as a child is born, its father approaches a qualified astrologer, gets the birth chart duly drawn by him and the future of the child got predicted. Not only the fortunes and misfortunes of the child but also those of its parents and close relatives are also got predicted. Similarly marriages are fixed only if the horoscopes of the bride and bridegroom are in sympathy with each other. These practices still continue in Kerala amongst the public in general.

There is no clear evidence as to the period during which astrology commenced to influence public mind in Kerala. However it is evident that it came into contact with public life fairly long before the advent of the Malayalam era. In M.E. 44 (A.D. 869) Ravi Varma Kulasekhara, the then ruler of Quilon established an observatory in his capital city of Mahodayapuram for conducting experiments, researches and observations in astrology. There was also a council of astrologers under him, where debates and discussions were held on matters concerning astrology. In those days there was no dearth for experts amongst astrologers who could calculate with precision the degrees of the various planets, prepare daily almanacs and also foretell events correctly without recourse to elaborate instruments. The astrologer had then a status of his own and no wonder, he was held in high esteem.

Kerala is unique in having given birth to a number of eminent astrologers, possessed with exceptional talents. Foremost among them were Thalakulathu Bhattathiri, Mazhamangalathu Sankaran Namboodiri, Pulimukathu Potti of Cherianad and Machatt Narayanan Elayat. It was Thalakulathu Bhattathiri who established the famous Pazhoor Padippura in Travancore. He is also the author of *Dasadhyayi*, the well-known commentary on Varahamihira's Hora. Pazhoor Padippura is about 700 years old and has become a household name in Kerala. It is said that the residents of Pazhoor Padippura are the descendants of Bhattathiri and have hereditary and specialised knowledge in astrology. Mazhamangalathu Sankaran Namboodiri was a great scholar. He had acquired special skill in dealing with Horary Astrology. There was once a child-feeding ceremony (Annaprasana) in the Illom of Edamana Pandarathil at Chengannur. When some friends invited Mazhamangalathu for the ceremony, he refused to go with them saying that there would be no such function and that the guests would all return disappointed. His friends did not pay heed to his words and went to the Illom. When the Muhurtham (auspicious moment) approached, the child who was being taken out for the function after the ceremonial bath slipped down and perished on the stone-flogged central pavement all on a sudden to the great surprise and grief of all. Pulimukathu Potti had once an occasion to meet the Raja of Chempakasseri. The Raja had only contempt for astrologers and their lore. He would deridingly ask every astrologer who visited him to work out a *prasna* for him without actually sharing with him what he had in his mind. Not knowing how to proceed and thus puzzled, the astrologer would aim the *prasna*, at the Raja's health and longevity and begin to sing songs of praise about him. The Raja in turn would immediately dismiss him off with abuses and rebukes. This practice continued for a long time. As usual, the Potti was also asked to work out a *prasna* (horary). Knowing fully well the ways and intention of the Raja, the Potti began to set his *prasna* on the future of a plantain standing close-by. He predicted that the tender leaves of the plantain were badly affected by a beetle, that only two leaves had been damaged, that if manured, watered and properly taken care of, the plantain would, in due course, produce a bunch having 94 fruits and that the Raja would be able to eat 3 fruits from it. The Raja acted accordingly and waited. The plantain produced a bunch with 94 fruits as predicted by Potti. But when it became ripe, the Raja could eat only 3 fruits, all the remaining ones having been eaten away by a pole-cat. The Potti was then called in and was suitably rewarded. Thereafter, it is said, the Raja gave up his prejudice against astrologers, and used to consult them whenever necessary. Vidwan Machatt Narayanan Elayath who flourished in the latter half of the 10th century was a reputed Vidwan in astrology. The then ruler of Cochin, Shaktan Thampuran had been wonderstruck several times at the correct predictions made by Elayath. There was no one in that locality in those days who could excel Elayath in working out *prasnas* correctly. In 964 M.E. when Tippu Sultan was camping at the north with a view to invade Travancore, he sent for Elayath to predict his future. Tippu was playing with a parrot at the time of Elayath's arrival. He wanted to test Elayath in his proficiency in predicting events before taking him into confidence. He therefore asked him to predict on the life of the parrot. Elayath said that the bird would live for some more days. Immediately the Sultan drew out his sword from the scabbard with the intention of killing the bird. But the tip of the sword struck his thumb and in the resultant commotion, he let the bird go. It was after testing the capacity of Elayath in this manner, that Tippu told him of his intention to invade Travancore. To the utter disappointment of the Sultan, the Elayath predicted failure for him. The Sultan lost his temper in no time and made Elayath his captive but later on since the prediction was found correct he was released and profusely rewarded.

According to the saying *Jyotissastram vadatyatra Kalam Vaidika Karmanam*, Astrology was employed mainly in Kerala as in other parts of India in ancient days to determine the time for performing the several rites ordained in the scriptures. It was therefore the *Ganitha* branch of astrology (mathematical portion) that attracted the Pandits in ancient Kerala. So many outstanding works on *Ganitha* were produced in those days, that it has been recorded by eminent tourists from abroad, that it was indeed Kerala

that had made rapid strides in the path of progress of the science of astrology in India. Known as *Muhurtapadavi*, there are four books, dealing with *Muhurtha Vibhhaga* all written by Kerala authors. In the commentary to one of them called Varadipika, prepared by one Parameswaran Namboodiri in ME 990, several original books on Muhurtha are mentioned in the following order: *Panchasiddhanta shatsutra, muhurtaratna, muhurtadipaka, vidiratna sarasamucchaya, sarvasidhi panchasika kalaprakasika, charadipika, charasangraha, madhaviya, muhurtapadavyadishu muhurtasastreshu.* The Bhashyam (commentary) of Kelalloor Chomathiri on the famous *ganitha* work, Aryabhatiyam is well known. It was a popular saying in those days that Chomathiri was to Aryabhata what Patanjali was to Panini. *Karanapadhathi* is yet another famous work of Chomathiri. During 600 ME. one Vadasseri Parameswaran Namboodiri discovered *Drigganitham* because the *ganitham* then being followed was found to be not in tune with the times. It is said that this great scholar took nearly 55 years to work it out. As a result it became widely known that there was no system in the whole world as scientific as the *Kalaganana* of Kerala. Even today the *Drigganitham* of Vadasseri is most respected and mostly relied upon in preparing almanacs. In fact this system has also gone out of date now. Sri Pulliyoor Purushottaman Namboodiripad and some other scholars have evolved new systems, but the fact remains that reforms which could claim universal acceptance are yet to be made. The Calendar Reform Committee appointed by the Government of India has published a voluminous report but unfortunately it does not represent the views of all the leading men in the line.

The reputation which Kerala had in ancient days as regards the development of the science of astrology is now fast fading. Learned Pandits in astrology are very rare nowadays, and very few people are bent upon studying the subject. It has to be remembered that most of the ancient works in astrology are in the Sanskrit language and the neglect shown to the study of Sanskrit is one of the reasons why learned Pandits in astrology are seldom available. However, though the predictions made by quacks do not prove correct, the public are interested in the subject and are satisfied with whatever little truth they receive from such predictions. It has also become a general feature that the newspapers publish *weekly nakshatra phalam*, since the general public are found interested in it. Even those who profess no faith in astrology or rather who deprecate it publicly, are used to select auspicious moments or at least avoid Rahukalam for all important undertakings. **It may be said that one of the main reasons why astrology cannot be ignored by the people of Kerala is that it has formed part and parcel of their culture.** As far as the Kerala literature is concerned, it is permeated with the spirit of astrology. Words and idioms of astrological origin for *e.g. Kemadrumam, Grahappizha, Ezharassani, Gulikan, Sukradasa* are found used in ancient malayalam works, since almost all poets of Kerala—Tunchath Ezhuthachan, Punam Namboodiri and the like, were well-versed in the subject. A knowledge of astrology has therefore become necessary for every Malayali in his own interests even if he did not want to take to it as a profession, because he could understand malayalam literature to its full extent only if he had a grasp of astrology also. Some of the well-known poets of Kerala have profusely contributed to the development of the subject. The name of Melpathur Narayana Bhattathiri, the great poet and author of *Narayaniyam* is in the forefront amongst them. *Chamatkara Chintamani* and *Ganita Narayaniyam* are the two main astrological works of Bhattathiri. Since many of the ancient works in astrology are not intelligible to the malayalam-knowing public, some Pandits of Kerala took to themselves the task of providing facile and felicitous versions of such works in Malayalam. Thus during the 7th and 8th centuries (M.E.), many such works especially those containing renderings from passages in Hora, were published. There are also numerous Malayalam books both in prose and poetry which prescribe the method of preparing *jathakams* (horoscopes) in lucid and simple manner. The Malayalam commentaries of the late Kaikkulangara Rama Varier, the noted annotator and scholar of Malayalam language, for *Brihat Samhita, Prasna Marga*, etc., are very well known and useful for amateurs in astrology. No one in Kerala can forget the name of the late Punnasseri Neelakanta Sarma (1033–1110) who was an expert in *Grahaganitam* and *Golaganitam* alike. He had also published commentaries of several astrological works in Sanskrit. His work *Jyotish Sastra Subhodhini* is an original one and needs little introduction to the students of astrology. In 1060 M.E. he began editing an almanac and it was known as *Pattambi Panchangam*. Another name which comes to our memory in this connection is that of Professor A. R Raja Raja Varma (1038–1093) the celebrated luminary in the firmament of Malayalam language and literature. He had not contributed much to the development of astrology but had been evincing keen interest in the subject throughout his life. His two papers on *Karana Parishkarana* and *Panchanga Sudhipadhati*, read at the Jyotisha Maha Sammelan at Sringeri in 1085 M.E. stand testimony to his deep erudition in and the vast researches he had made in the subject of astrology.

To be out shortly

Prasna Marga (English Translation)

With original slokas in Devanagari, notes and illustrations. A great and unique classic on Prasna (Horary) as well as Jataka (Horoscopy)

IN TWO PARTS

I Part....1 to 16 Chapters, Price about Rs. 12.75/-

II Part....17 to 32 Chapters ,, Rs. 12.75/-

First Part will be ready in April 1959

ORDERS REGISTERED FOR BOTH PARTS AND NOT FOR THE I PART ONLY

Raman Publications

Electional Astrology

BY K. V. SIVARAMA IYER

THE Hindus of Vedic times divided knowledge under eighteen heads:

अंगानिवेदाश्चत्वारो मीमांसा न्यायविस्तरः।
पुराणं धर्मशास्त्रं च विद्या ह्येताश्चतुर्दश ॥

The four Vedas and their six component parts, Mimamsa a system of philosophy, Logical philosophy, Epics and Jurisprudence are the fourteen branches of knowledge. Four more were added to these fourteen items and the eighteen branches of knowledge resulted.

आयुर्वेदो धनुर्वेदो गन्धर्वो वेद एव च।
अर्थवेदश्चतुर्थश्च विद्या ह्यष्टादशस्मृताः ॥

The science of Medicine, the science of Archery, Music and Economics were the four additions.

The six parts of Vedas are:—(1) *Siksha*—the science by which the art of correctly pronouncing and chanting of the Vedas is enjoined; (2) *Vyakarana*—deals in grammar, syntax, phraseology and prosody; (3) *Nirukta*—rendering paraphrases of the basic ideas mentioned in the Vedas; (4) *Jyotisha* (astrology)–advises the appropriate and auspicious periods for Vedic rites; (5) *Kalpa*—exposition of the order and methods of Vedic performances; and (6) *Chhandas*—dealing in the rhythm of Vedic mantras.

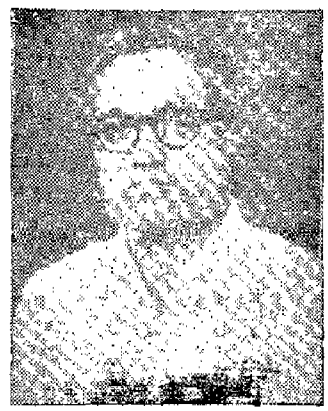
Mimamsa helps the study of Vedas in all their aspects by correct interpretation of the rituals and of ambiguous points in regard to Vedic texts. Nyaya Sastra establishes the truth of the Vedas by judicious and lucid arguments and illustrations. Puranas (epics) are in fact deemed to be the fifth Veda and they are eighteen in number. Ayurveda helps to preserve the health of the physical body. Dhanurveda (the art of archery) assists kings in the protection of their subjects from enemies. Gandharva Veda teaches music, an unavoidable necessity for the recital of Sama Veda. Artha Veda is the scientific knowledge for the accumulation and preservation of wealth and connected subjects. Dharma Sastra is an elaborate treatise on the theoretical Vedic points with appropriate definitions bearing on the duties of the various castes of people subject to time, place and eligibility.

From the foregoing it will be seen that the fourteen branches of knowledge are of immense help for an intellectual and intensive study of the Vedas.

Like the eyes which are of supreme importance to the physical body, the science of astrology which is rightly termed the eyes of Vedapurusha, has an exalted position among the Vedic science.

The science of astrology is broken down into three main divisions and six sub-divisions.

स्कन्ध त्रयात्मकं ज्योतिश्शास्त्रमेतत्
षडङ्गवत्।
गणितं संहिता होरा चेति स्कन्धत्रयं
मतम् ॥



K. V. SIVARAMA IYER

The calculative or mathematical part, Samhita and Hora are the three main divisions. The six sub-divisions are Jataka (horoscopy), Gola (planetary), Nimitha (omens, etc.), Prasna (horary astrology), Muhurtha (electional astrology) and Ganita (mathematical astrology).

जातक गोल निमित्त प्रश्नमुहूर्त्ताख्य
गणितनामानि-

Ganita Skanda consists of the mathematical and planetary parts. *Hora Skanda* treats of predictive, horary and electional astrology while *Samhita Skanda* speaks of omens and other allied subjects. It should however be noted that *Hora Skanda* also deals with subjects like omens, etc, to some extent.

The mathematical portion, *Ganitha Skanda* forms the authoritative basis of the science while the other two divisions—Samhita and Hora are purely predictive. The *Ganitha Skanda* itself has been divided into ten sub-divisions. To obtain a comprehensive understanding of the *Ganitha Skanda* an intensive study of the five Siddhantas is unavoidable. Brahma, Saura, Vasistha, Raumasa and Pulisa are the titles of the five siddhantas.

The topic of Muhurtha or Electional Astrology which has become the veritable offspring of a deluge of contradictory opinions and dogmas has been selected from this all embracing and mighty science of astrology.

Muhurtha may be defined as the most auspicious moment that enables one to observe and perform successfully the various Vedic rituals without the risk of being obstructed by any unforeseen hurdles or impediments and thereby confers on the doer the full beneficial effects of the rituals.

मुहुर्म्मुहुस्मारयते कर्तारं श्रेतकर्मणां।
तस्मान्मुहूर्त इत्याहुर्म्मुननयस्तत्वदर्शिनः ॥

Any one can realise from actual experience that things properly done in good and opportune periods bear desirable results while the haphazard way of doing things at times suited to convenience and creature comforts unmistakably bring in its train quite adverse, unpalatable and more often than not unexpected results. Muhurthas enable one to carry out things unhindered and unembarrassed. Even today Hindus consult astrologers for auspicious times for setting out on a journey, for constructing a new house, for embarking on a new adventure, for marriages and similar other important things. The science like any other modern science should not be decried if bad results are brought about due to the inefficiency of those who are consulted for selection of auspicious Muhurthas. Due regard should also be given to the fact that in these days of Kali Yuga it is next to an impossibility to get an auspicious Muhurtha devoid of any blemish whatever. Nevertheless the astrologer who fixes up Muhurthas for his consultants should always bear in mind the Sastraic saying:

ज्योतिषं व्यवहारं च प्रायश्चित्तं
चिकित्सितम्।
विनाशान्नेणयो ब्रूयात् तमाहुर्ब्रह्म
घातकम् ॥

(Continued on page 134)

A NEW METHOD OF PROGRESSION

(Continued from page 56)

	Age Ascdt.	Sun Position	Result
	22 Dhanus	Libra	11 Good
* To be got determined accurately	23 Kumbha or Meena *	,,	9 Good 8 Bad
	24 Mesha or Vrishabha *	,,	7 Bad 6 Good
	25 Simha	,,	3 Good
	26 Scorpio	,,	12 Bad

Like this, the scheme can be extended.

Extension to prognostication for any desired day.

In the course of one sidereal year, the earth makes one more revolution, with the result that the zodiac of signs in one day makes a revolution of 1.00273783 circles or 1.00273783 $\times$ 12 or 12.03285396 signs.

Example.—Ascendant at birth 6.2349 signs.

Date of birth 9th June 1907. Required the effects of progression for 1956, March 21.

1. No. of years past 48.
2. No. of days past to the previous date of reference and the moment of birth—285.
3. Progressed Ascendant will be therefore :

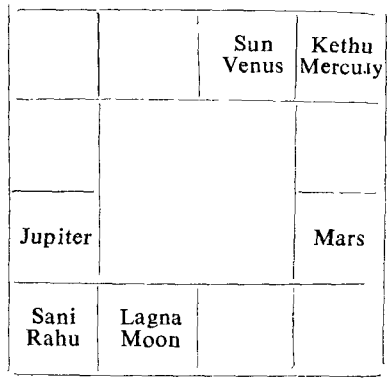
$$= 6.2349$$
$$3.0765928 \times 48 +$$
$$1.00273783 \times 12 \times 285$$
$$= 6.2349 + 3.6765 + 9.3633$$
$$= 7.2747 \text{ signs.}$$

The progressed planetary positions for 1955–56 will be (for 48 years past) as follows :—

Moon	7.5587
Mars	4.1649
Mercury ...	2.9370
Jupiter	9.6718
Venus	1.0219
Saturn	8.8982
Rahu	8.9010
Kethu	2.9010

The chart for that anniversary day would be as hereunder :—

(*N.B.*—The positions in the chart are for the day of anniversary of birth; but by the date of reference, *i.e.*, 1956 March 21, the planets Moon, Sani, Sukra and Budha have changed over to Dhanus, Makara, Karka and Karka respectively).



The following features may be noticed :

(1) Lord of Lagna is in 10th aspecting Lagna.

(2) Lords of 9th and 10th in 1 and 7 respectively aspecting each other with Venus (in his own house) who is the lord of birth Lagna.

(3) Jupiter lord of 2nd and 5th in the 3rd aspecting the 9th as also lord of 10th.

(4) Moon and Jupiter though apparently in their houses of debilitation have crossed their debilitation degrees.

The result was that the native became a Gazetted Officer on that day, although much of monetary benefit did not obtain due to Sani and Rahu in second house.

Lastly, this system can be extended to mundane charts as well to predict long-range effects as the prosperity or adversity of a country takes a long time to shape itself. It is my intention to take up the question as a separate article.

In conclusion, may I request my learned readers to apply the above principles in their own cases or to those of their friends and find out for themselves the measure of success that can be claimed by this novel method of progression.

ASTROLOGY AND ITS PRACTICAL APPLICATION

(Continued from page 124)

Congress horoscope as well as Gandhi's horoscope are free from aggressive tendencies. The fact that he differed from its policies and the strange fact that he was not even an anna member are clearly indicated by the *Shadastaka* (6 and 8) disposition of the two Lagnas. If you superimpose Nehru's horoscope onGandhi's great radical harmony obtains between the two. Nehru's Lagna as .well as Moon come to the M.C. of Gandhi (profession and creed). So Nehru was a true successor. The Pancha Mahapurusa Yoga caused by Venus in this horoscope falls in the ascendant of Gandhi and *vice versa*. How closely are they knit together. Of course, Mars in Jawahar's horoscope is conjunct (separated by 7°) Gandhi's natal Sun. Where deep harmony exists such points of discord act as a foil to the gem of unity. Gandhi's political philosophy is tinctured with extreme spirituality while that of Nehru's (Mars 10th lord in 3rd) is one based on ceaseless activity and dynamism. My line of argument would be still more clear and lucid if we compare Gandhi's horoscope with that of Godse, his assassin. Godse's Saturn, 8th and 9th lord, opposes Gandhi's ascendant. A malefic in one should not come to the angle of the other. If so the latter will suffer. Gandhi's Saturn (ruling Mantrasakti) afflicts by opposition Godse's Mercury, the ruler of his ascendant. He did not like his policy of pacifism towards Pakistan. The consummation of disharmony lies with Mars. Mars for Mithuna Lagna is a great malefic and to add to it he resides in Godse's Lagna and occupies Aridra ruled by Rahu. Mars therefote is criminogenic in nature. Just as Faisal's lights stood in square aspect to Uranus in the horoscope of the ill-fated chart, Gandhi's natal Sun (Kanya 18° 22′) is in full square aspect to Godse's Mars (Gemini 19° 16′). The martian fired the bullets and made an end of the Mahatma.

Man is a social creature who acts by his intelligence. He always lives in a society. Even nations cannot live independent of others. Disturbance to peace in any corner of the world causes disturbance everywhere. All nations are struggling hard to live together as one big well-integrated association. They must all bear in mind the several astrological implications before entering into pacts, organisations or associations.

ASTROLOGICAL SIGNIFICANCE OF BASIC INSTINCTS

(Continued from page 64)

its object is to take all necessary steps to achieve the protection, care, upbringing and training of the progeny. The emotional colouring which is superimposed upon this instinct is what the layman calls "love". But because the average person normally fuses (as well as confuses) three dynamic emotions in this his conception of love, namely, sexual desire, sensuality, and real love (which consists of a genuine care for the welfare and well-being of the person beloved) the reasons why a completely inhibited parental instinct can become extremely deleterious should be perfectly obvious.

One of the fundamental needs of a child is love—real love, as above defined. But there are many mothers whose idea of love is to gratify their own personal vanity. Such mothers will pamper their children, fondly believing they are lavishing love upon them, when all the time their primary idea is to dress their children nicely in order to show off to the neighbours; to give their children the most expensive toys in order to satisfy their own vanity and to gratify at the same time a patronising whim. And if the net result is also calculated to impress the neighbours, so much the better, for the mother is then able to enjoy the reflected glory of the child.

Few such mothers realise that the children themselves can see through these tactics. This is because what the children need is real love, not adulation; and real love is just what they are not getting.

But mothers and fathers need not imagine they are bestowing real love when they proceed to pamper, indulge, and fondle their children. What they are doing when they do this is to gratify their own sensuosity; and their action is capable of doing mischief to their offspring. For this is a form of purely sensual love which is aimed more at producing self-gratification for themselves than at promoting the welfare of the child. Mothers who fall in love with their sons (or fathers with their daughters) in this sensual way easily produce unconsciously in their offspring an Oedipus complex. Later on, the parent may have to pay a heavy price for this, since in most cases the child ultimately breaks loose from the sensual enchainment, very often with bitterness and hate against the parent. In which case the biblical lament: "How sharper than a serpent's tooth..." reflects the paradox. Whence is seen the need for the interposition of selective love-inhibitions in connection with this instinct.

Another necessary inhibition to the parental instinct is the one which is devised to safeguard against *possessiveness*. For the possessive parent can be one of nature's worst abominations. This is because the craving for self-importance becomes unnaturally grafted on to the main feeling of tenderness. It therefore develops into a morbid craving to mould the children's lives into the pattern of the parent's own proclivities, to hold on to the children and enslave them by becoming so essential to them that the children cannot do without the parent. This form of training, however, is not equipping the children to face life and its problems. Indeed, it is turning them into misfits and into potential problem parents of the future.

Again, a child needs protection; but at the same time it needs to be safeguarded against overprotectiveness. Life is an adventure and an eternal risk; and those parents who carry their protection to excess will end up by finding their children peculiarly vulnerable when the time comes for them to take wing and leave the downy nest at the heart of the impregnable fort which the parents had built for them.

There is an awful lot which could be written about this instinct and the astrological insignia going with it. But lack of space forbids and we must pass on to consideration of the next instinct.

The Acquisition Instinct is governed by Leo. It is an instinct which induces us to hang on limpet-like to objects, property, people, causes, or things, with the full sense of possession. The acquisitive instinct, in fact, frequently builds up the possessive mother who regards her children as vital parts of herself and as necessary supports for her ego. Also it is the compulsion of the acquisitive instinct which builds the multi-millionaire and the man with an obsession to make a fortune. It is the acquisitive instinct which gives rise to the collecting craze and which turns some individuals into hoarders and misers. It is an instinct which can make kleptomaniacs of some people and thieves out of others. For the instinct is indiscriminative *per se* and can readily attach itself to objects which are not the property of the individual concerned. This is clearly seen in the way in which work people are apt to identify themselves with tools, machines, animals, etc., which have been provided by the employers. Such employees ultimately come to regard the items as their own special property, and they react accordingly should another worker attempt to make use of the items in their stead.

Obviously, certain inhibitions reventing the extreme force of is instinct from being felt con-iously, require to be built up y the unconscious censor as oderators. For the purpose the safeguarding inhibitions to damp down a proportion f the compulsive urges and thus revent the situation from get-ng entirely out of hand—as it oes get out of hand when, in the se of the Acquisition Instinct, person is transformed into kleptomaniac or a thief.

The Curiosity Instinct is iden-fiable with the sign of Virgo. low a healthy curiosity can be xtremely beneficial—which is hy we need to be careful over lecting the types of inhibitions hich the unconscious censor ould apply to the repression f this instinct. For the instinct rms the basis of the investi-atory spirit, bestows a thirst r knowledge. It promotes the ioneering spirit as well as imulating inventive genius (a enius which is developed hen our curiosity as to how ings work is gratified leaving s free to apply our acquired nowledge in liaison with our naginative faculty). It is the uriosity Instinct which gives us e urge to know what life is all bout, to sound and attempt to iscover all the secrets and mys-eries of nature, to take grand-ther's clock to pieces in rder to find out what makes it ck! The compulsion of the stinct becomes manifest in the uestions posed by childern. ut a child is caused to construct e wrong type of inhibition to e instinct should we choke im off by declaring that "child-en should be seen and and not eard" as our reaction to an mbarrassing question to which e cannot find a ready answer. fact, we cannot be too careful ver dealing with questions posed y children, no matter how tire-me the children may some-times be. For it is all too easy to dam up the instinct at its source—with deplorable later results.

However, readers should be forewarned and should not construe the above statement as constituting a recommendation to develop a completely uninhibited curiosity instinct. Remember, it was curiosity that killed the cat! Totally uninhibited, the compulsion of this instinct will drive us to poke our noses into quarters where they are not wanted, will make Peeping Toms of us, will turn us into Paul Prys and Mrs. Grundies, will turn us into informers, spies, and objectionable prowlers.

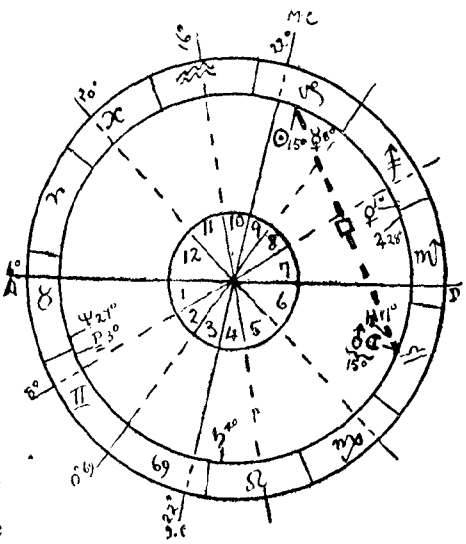
Newspaper reporters are perhaps as uninhibited in regard to the curiosity instinct as it is possible for people to be without running smack into trouble. But even journalism for the yellow press must have its ethics—a fact which argues that even the key-hole journalist has to prepare some inhibitions to his instinct if he wishes to steer clear of trouble. However, I have provided these little vignettes of the curiosity instinct in extreme forms in order to demonstrate clearly that we cannot afford to remove all inhibitions from any of our basic instincts. For if we do, their compulsive powers will ultimately become uncontrollable—to our cost and our sorrow. In my view, the inhibitions are vastly more important than psychologists have yet realised. Up till now, the thoughts of psychologists seem to have centred exclusively upon the problem of removing inhibitions in order to release the repressed tendencies; and they have been led in that direction through an over-specialisation in the theories of Sigmund Freud—with the result that they have come to believe that sex-motives explain everything! That is why I am now proceeding to show them how wrong they are. For I am demonstrating that they have not only the Oedipus Complex, Narcissism, the Id and the Libido to contend with; but much more importantly the twelve basic instincts.

(To be continued)

TROINSKI'S TERTIARY DIRECTIONS

(Continued from page 42)

859 days. From this we subtract 730 (2×365=2 years), leaving us a remainder of 129, which according to the Table for year-numbers comes to



Aspects:

1. Neptune conjunction Moon, conjunction Pluto, conjunction Mars, conjunction Aldebaran in 8th house.
2. Neptune, Moon, Pluto, Mars, square Saturn in 10th house.
3. Neptune, Moon, Pluto, Mars, square Jupiter in 4th house.
4. (R) Mars in 8th house square (R) Saturn in 10th house.
5. *(T) Mars in 8th house square (T) Saturn in 10th house.
6. (T) Mars in 8th house square (R) Saturn in 10th house.
7. (T) Saturn semi-square with (T) Herschel.
8. (T) Mars quintile with (T) Herschel.
9. Mars and Pluto in 8th house =Lord of the ascendant (Scorpio 9°) in TDH.

---

*T=Tertiary. R=Retrograde.

9th May.* So the date for the TDH is 9th May 1891.

In the TDH of Hitler dated 9th May 1891, we find the following:—

1. Neptune, Pluto, Moon, Mars and Aldebaran are in close conjunction in one house and on the cusp of the 9th house—or within its orb—and in square to Saturn in the 10th house.

2. Mars near cusp of the 8th house and in square to Saturn in 10th house in the Radical Horoscope is repeated again (Mars square Saturn) in the TDH.

3. Mars and Pluto (of the group of planets on the cusp of 8th house) are the lords of the ascendant (Scorpio 9°) in TDH.

4. Jupiter also throws a square aspect to the conjunction group on the cusp of 8th house.

5. Also Saturn semi-square Herschel; Mars quintile Herschel; Saturn semi-square Herschel; Mars sesquiquadrate Herschel. This TDH of Hitler for 194-, on the completion of his 56th year, speaks for itself and hardly requires any further clarification.

Examining the aspects separately (without taking on overall view of the TDH), we find the following:—

1. The group of planets (Neptune, Pluto, Moon, Mars and Aldebaran) on the cusp of 8th house is very near to the birth position of Pluto (4° to 5° Gemini) which in the Radical chart also occupies the 8th house. The effect of this Radical Pluto, we must therefore add to that of the group conjunction on the cusp of the 8th house.

2. Further, one day before (*i.e.*, on 8th May 1891 and therefore in TDH for March 1945) there was a tertiary New Moon Sun conjunction Moon in Taurus 17°. This is the position of Venus-Mars conjunction on the cusp of the 8th house in the Radical chart, which are also severely afflicted by Radical Saturn (square) in the 10th house. And the 8th house in a Radical chart is the house of death and the 10th house represents the native's honour, trade and profession.

3. Finally, it may be pointed out that at the time of Russia's counter offensive in January 1945, Hitler's tertiary Mars in 8th house and lord of the ascendant in the TDH was in exact square to his tertiary Saturn, and tertiary Sun being square to (R) Saturn at the same time.

*The time to be taken for the TDH is the actual time of birth 18*h.* 30*m.* (Local Time) Braunau.

TABLE FOR TROPICAL MONTHS: (PAGE 100)

(Or the Number of Zodiacal Revolutions of the Moon)

Note :—Deduct one day for each leap year (excluding 1700, 1800 and 1900) falling between the date of Radical Horoscope and the calculated date of TDH.

(To be continued)

Astrology and Modern Thought

BY B. V. RAMAN

(FOURTH EDITION)

The rationale and claims of Astrology have been examined from the viewpoint of Modern Scientific Thought. The arguments put forth by some of the scientists to decry Astrology have been ably refuted and supported by unimpeachable evidence.

The book will convince any so-called sceptic who is accustomed the slogan 'I do not believe in Astrology'. To an intellectual it contains full of weighty material for reflection.

It is a book that every one should read.

THE ASTROLOGICAL MAGAZINE

RAMAN PUBLICATIONS, "SRI RAJESWARI", BANGALORE-3

AROUND *the* WORLD

By DOUGLAS HUNT, M.A.

THE science of astrology can hardly ever have been done so proud in a single periodical as in the special astrological number of *La Tour Saint-Jacques*. Nearly three quarters of this superb bimonthly has been devoted to the subject.

It begins with four articles on contemporary astrology. The first of these, by Maurice Colinon, chastises severely the ignorant commercial 'astrologer', who is out only for the cash, and grinds out his prognostications with robot-like efficiency, pestering his customer with progressively cheaper 'special offers'. One of the last of these roneotyped letters informs the prospective client that his map has so intrigued the writer of the letter that he is prepared to offer an interpretation for a quarter of his 'regular' price This appeal to human vanity is especially cunning, and almost deserves to succeed.

Some fifty pages are then devoted to the history of astrology—with especial reference to Copernicus and Kepler.

Copernicus studied at the University of Cracow, the oldest, I believe, in Europe, under Johann von Glogau and Albert de Brudzewo, both of whom published astrological works and predictions. He lived in Italy for seventeen years, and while at Bologna was the pupil and lodger of the town's official astrologer, Domenico Maria di Novarro. At Padua he studied medicine under the doctor and astrologer Fracastorio, who had postulated 79 concentric 'spheres'.

It was, of course, Copernicus who revived the ancient knowledge of the heliocentric system. It was, however, Rhaeticus, a Lutheran astrologer and Professor at the University of Nuremberg, who persuaded Duke Albert of Prussia that the system was in every way compatible with the theories of astrology. He then obtained from the Elector of Saxony the permission to print the *magnum opus* of Copernicus. The astronomer was at first reluctant—did he foresee the fate of Galileo at the hands of an 'infallible' Church?—but finally consented. In 1542 the work was begun, and the following year the first copy was laid on the death bed of the author.

This work, which was supposed to have given the death-blow to astrology, was, as we see, born under the influence of astrological teachings, printed thanks to the zeal of astrologers, and finally dedicated by Copernicus to Pope Paul III, the patron of astrologers.

It was Kepler who was largely responsible for securing a wider acceptance of the heliocentric system. Serge Hutin contributes a scholarly article on *Le Fondement 'Platonicien' de l'Astronomie Keplerienne*, which includes extracts from the astronomer's *Somnium* and *Harmonices Mundi*.

Johann Kepler (1571—1630) belonged still in the tradition which saw nothing extraordinary in combining the functions of metaphysician and scientist. He was, says M. Hutin, a Platonist. He speaks of pre-existent ideas in the mind of God which have been implanted in the human soul. These 'ideas', which the soul perceives by means of 'instinct' are what Kepler himself calls archetypes, and come very close to the archetypes to be found in the psychology of Jung.

M. Hutin quotes freely from *Naturerklarung und Psyche*, by Jung and Pauli—recently published in English by Kegan Paul under the title of *The Interpretation of Nature and Psyche*. Commenting on Kepler's views on astrology as expressed in *Tertius Interveniens* and *Harmonices Mundi*, that the individual soul contains in itself the idea of the zodiac, but that it is the planets, not the fixed stars, which by means of their light are the vehicles of astrological influence, Pauli remarks that in this respect Kepler is opposed to the traditional astrology. Astrological effects are not caused by the heavenly bodies but rather by the individual souls, with their specific reactions to certain proportions.

"In Kepler's theories", writes Pauli, "astrology has been completely integrated into a scientifico-causal system of thought. In putting the emphasis on the role of the rays of light he has incorporated astrology into physics, and indeed into optics." (My own translation from M. Hutin's French).

It would be interesting to examine Pauli's chapter on the disputes between Kepler and the Rosicrucian, Robert Fludd, but there is still much more in this fascinating volume which I can hardly even touch on.

An article on astrology in art is followed by a section on statistics in astrology. There is a note on C. G. Jung and astrology, and one on the attitude of the Roman Church to the science. As far as I could gather from a typically tortuous exegesis, that Church approves of all those aspects of astrology which do not *meet with its disapproval, while* strongly condemning those which do not meet with its approval.

The astrological section of this publication concludes with a summing up by the editor, M. Robert Amadou. "Mystic, philosopher, poet," he writes, "the ideal astrologer is all of these...Practical astrology cannot be unconcerned with *any* human activity." At the same time he condemns the 'mathematici', those mechanistic astrologers who would exclude from their calculations all human factors, even free will.

The remaining 80 pages or so are devoted to reviews of books and periodicals, and to some enlightening articles on the scientific study of E.S.P. For those who would like to procure this veritable encyclopedia of astrology the address is 53, rue Saint-Jacques, Paris 5me.

Writing at the end of October, I have before me Lyndoe's November Preview (written in early July) from *Prediction*. I quote at length and without any comment, except to restate my conviction that even in the hands of one of the masters of the craft, such as Lyndoe, mundane astrology is still far from reliable.

Lyndoe writes: "We are now at one of the major junctures in world affairs. You can be *quite sure that* the Mars-Taurus association will give the gravest turn in those Middle-East concerns which chiefly affect Britain... My impression is that by this period the ultimate challenge, so far as the British interests are concerned, will have been given...And that means, of course, military measures afoot.

"Parliament...passes into a phase which could be extremely critical... There is the beginning of a major change, and it could bring down not merely the administration but a large part of the very institution itself... Let there be no doubt about it, November is one of the great watersheds in our political history, and there are events in the making that must alter everybody's way of life.

"If no other chart ever spoke of warlike measures this one surely must

be taken to do so? The least that can be said of it is that if actual war has not had its beginning by this reading—a fact denied by events now proceeding, to be blunt—the consequences of this chart certainly imply such a course ...We have passed the point of no return.

"To those in high position the next seven or eight weeks provide some of the most terrifying experiences. I will not, for reasons obvious enough, specify. But I will say that there is removal by death of important people, that the course of state affairs will be interrupted now and again in coming months by events of the gravest nature, and that these things run side-by-side with constitutional issues of the most important kind.

"The whole world (as innumerable charts testify) is going into the melting pot again. There can be no doubt that this is one of the great troughs in history, and that a devastating series of changes will occur. Their impact will shake us, but it will shake other countries (not overlooking U.S.A. and U.S.S.R.) still more."

ELECTIONAL ASTROLOGY

(Continued from page 127)

(He is considered the greatest sinner who without a sound and sufficient knowledge poses as a learned man and gives advice on matters astrological, medicinal and judicial.)

One should not also jump to the conclusion that anything begun at an auspicious moment is bound to come to a happy consummation. One cannot escape the fact that even actions begun in suitable Muhurthas should necessarily be implemented by adequate efforts and expeditionary measures required of such actions. Desirable results lie in the harmonious combination of the Muhurtha for starting on the ventures in question and thereafter contributing to them the human efforts required for them. We might not be far from the truth in coming to the generalisation that things well begun at the proper auspicious time often end well even in the absence of proper efforts. The converse of this is also often true. Things started on inauspicious times, despite strenuous efforts of persons concerned often if not always bring in bad results. Any action begun at an inauspicious moment will bring in its store insurmountable difficulties on the way, making progress impossible. On the other hand an action started on an auspicious moment surmounts and overcomes all difficulties and is brought to a very speedy consummation.

There is a story, the authenticity of which is for anyone to conjecture, that Sri Rama's life in the forest, his separation from Sita and the series of calamities that followed were all due to the defective Muhurtha when he espoused Janaka's daughter. Many will remember that though Sahadeva himself gave Duryodhana the most suitable Muhurtha to commence the battle for the complete annihilation of Pandavas the bold but unlucky warrior was not able to begin the war at the exact time so stipulated.

The innumerable accidents which beset the various stages of a man's life, failures which turn life sour and miserable, divorces and absence of offsprings, domestic quarrels and illness and untimely deaths—all these can be reduced to the utmost minimum by wisely making use of this part of astrology for selecting appropriate moments for commencing various actions. From sexual copulation to the performance of the death rites of man—for all actions—auspicious and suitable Muhurthas are to be found and wisely made use of. For starting construction of new buildings, for commencing life in newly made houses, for ploughing fields and sowing seeds, planting different kinds of plants and trees, for collection and storage of crops, and even for making watch-sheds in fields; for starting on travels, journeys and trips, by air, water or land; for wearing new clothes and ornaments, for cleansing teeth and for taking oil baths; for purchase of lands, gold, silver and cattle; for making visits to kings, officials and priests; for appointing servants and cooks; for commencing medical treatments; for clearing debts; and for conducting death ceremonies and anniversaries, this all important science is to be consulted. The faithlessness of the modern educated towards this science is mainly responsible for the general unhappiness and restlessness writ large in the life of man today.

Ancient Kerala had produced many a learned astrologer well versed in Muhurtha Sastra to whom are attributed the inimitable works of *Madhaveeya, Krishneeya* and *Muhurtha Lanchana*. The following notes are prepared on a comparative study of *Panchasika, Sarvasiddhi, Kalaprakasika* and *Sarasamuchhaya* in addition to the three works mentioned above.

An astrologer who is sincerely desirous of attaining proficiency in this branch of the science should lead a clean and controlled life. *Ahimsa* in its broadest sense should be his leading light. Having mastered the science he should have attained *Mantra Siddhi* before he begins practice of the art. Mere calculation of dates and arrangement of details cannot give accurate results though they may be mathematically correct and theoretically right. The results thus produced will be like a body without a soul. Such results should flow through the mind and lips of an astrologer who has attained the requisite spiritual and moral standards Hereditary astrologers are respected and their opinions are valued, for the art of divination is in their blood.

Even at the risk of being scorned and ridiculed it may be stated that bumper harvests and a pleasanter and easier life would have been possible if only the men in authority took a little notice of this science and directed their course of actions at the most suitable moments. As has already been said simple dependence on the science alone cannot lead one to the elysium of best results. Beginnings at auspicious periods should be necessarily followed by enthusiastic efforts for the attainment of success.

The Almighty Power often referred to as *Kalapurusha*, ever existent, without beginning, end or repetition, is Time. Time causes everything in this world, nay, in the whole Universe. Life, growth and decay are controlled by time. One infinitesimal point of time is different from the other, thus accounting for endless variations and diversities. No two living beings are identical in this world as the time of their inception and manifestation could not be the same. The conjoint effect of the various rays of the ever revolving, effulgent and radiating heavenly bodies on any one thing in this globe of ours cannot be the same at any single moment. The countless cast of features, colour, shape, demeanour, behaviour and character, health and ill-health, luck and ill-luck, wisdom and idiocy, wealth and poverty, work, status, the span of life and death are all determined by the moment when the spermatozoon joins with the ovum in the womb during or after the sexual intercourse. That is why it has been laid down by the ancient seers that auspicious Muhurthas are to be selected for sexual unions. The increasing number of criminals and decrepits, invalids affected by incurable and chronic diseases from birth, the blind, the deaf and the dumb, the insane and the imbecile, and the dull, the idiotic and the perverted seen in our society today are living proofs to show the indiscriminate and thoughtless actions of their parents. *(To be continued.)*

THE PROOF OF ASTROLOGY

(Continued from page 60)

By self-discipline, austerities, love of all life, sacrifice,. compassion and benevolence, adherence to strict moral principles and cultivation of the *Atmagunas*, it is indicated that the *Jiva* can by degrees extricate himself from the strangle hold of *Karmabandha* — the autocratic sway of the planetary influences —and strike out boldly an independent path for himself towards the goal of spiritual realisation. The science of Hindu astrology is based upon these fundamental axioms of Hindu philosophy and is in perfect harmony with the Hindu outlook on life.

When dealing with Ayurdaya the texts lay down that the results guaranteed are subject to the native leading a proper moral life according to the *sastras* and honouring the regulations of the *sastras* in regard to food-taking. And further, the longevity indicated by the planets can be prolonged by *Yoga* and *Mantra-sadhana* and is liable to be cut short by loose and irresponsible living. *Jataka Parijata* declares:

येधर्म कर्मनिरताः द्विजदेव भक्ताः ये
पथ्य भोजन रताः विजितेन्द्रियाश्च ।
तेषामिदं कथितब्धमायुः ॥
ये पाप लुब्धांश्च देवब्राह्मणनिन्दताः ।
सर्वाशिनश्च ये तेषामकालमरणं नृणां ॥
स्वधर्मचार हीनानां पापकर्मोपजीविनां ।
शास्त्रेष्वनियतानां च मूढनामपमृत्यवः ॥

The *Saravali* concurs—

पथ्याशिनां शीलवतां नराणां सद्वृत्तभाजां
विजितेन्द्रियाणां ।
एवं विधानामिदमायुरत्र चिन्त्यं सदा
वृद्धमुनि प्रणीतम् ॥

There is also the well-known dictum of *Dharma Sastra*—

अन्युत्कटैः पुण्यपापैरिहैव फलमश्नुते ।

By conspicuous deeds of *Punya* or *Papa*, the results are reaped in this life itself.

Longevity is divided into seven classes of which the last, which surpasses the human span is said to be possible through *Yoga* or *Mantra Siddhi*.

बालारिष्टं योगसञ्जातमल्पं तेषां
भंगान्मध्यं दीर्घमायुः ।
दिव्यं योगाभ्यास मन्त्र क्रियाद्यैरायुः
सप्तैतानि संकीर्तित नि ॥

The *Vriddha Parasari* and other works prescribe the *Vidhis* for *Dosha Parihara*. In the *Asirvada Vakya* which we hear repeated on every religious occasion the same surmountability of the *Graha doshas* is presumed in utterances like:

ये ये ग्रहाः शुभेतरस्थानेषु स्थिताः तेषां
तेषां ग्रहाणां आनुकूल्य सिद्धयर्थम् ।
ये ये ग्रहाः शुभस्थानेषु स्थिताः तेषां
तेषां ग्रहाणामत्यन्तातिशयित शुभफल-
प्रदातृत्वसिद्धयर्थं..... etc.

The *Niti Sastra* has the following verses proclaiming the dual emphasis:

यस्याश्च येनेच यथाच यदाच यश्च यावच
यत्रच शुभाशुभमात्मकर्मं ।
तस्याश्च तेनच तथाच तदाच तश्च त्यवश्च
तत्रच विधातृवशायुपैति ।
रोग शोक परीताम बन्धन व्यसनानिच ।
अत्मापराध वृक्षाणां फलान्येनानि
देहिनाम् ॥
आयुःकर्मच वित्तंच विधानिधनमेवच ।
पञ्चैतान्यपि सृज्यंते गर्चस्थस्यैव देहिनः ॥
उद्योगिनं पुरुषसिंहमुपैति लक्ष्मी दैवेन
देयमिति कापुरुषावदन्ति ।
दैवं निहन्य कुरु पौरुषमात्मबुद्धया
यत्नेकृते यदिन सिद्धयाति कोत्रदोषः ।
नदैवमिति संचिंत्य त्यजेदुद्योगमात्मनः ।
अनुद्योगेन तैलानि तिलेज्योनाप्नुमर्हति ॥
यथाधेकेन चक्रेण नरतस्य गतिर्भवेत् ।
एवं पुरुष कारेण विनादैवं नसिद्धति ॥
पूर्वजन्मकृतंकर्म तद्दैवमितिकथ्यते ।
तस्मात्पुरुषकारेण यत्नंकुर्यादतन्द्रितः ॥

At the beginning of this article, we referred to the *pramada* of the astrologer as having brought upon the science a kind of disrepute, though it has record enough to show in its favour. It was also pointed out that the *pramada* was not only pardonable but for the most part unavoidable, because of the inscrutable nature of the transcendant subject and the vast variety of the literature upon it not unoften mutually conflicting or exclusive, and of the limitations of the human mind entering into the investigation. Great preparation and immense one-minded application are demanded of one who professes to be an astrologer and would do what is humanly possible for his client. The scrutiny of a single horoscope is such a mighty work for even an alrounq, well-equipped astrologer that not only he will be obliged to be employed with it for hours and days at a time but will have to revert to the labours from age to age of the native. In such a state of affairs an astrologer will have to confine his services to a few patrons only and cannot exercise his talents in a slipshod manner to all and sundry, if he should take to his profession conscientiously. That is why *Saravali* declared that the science was intended for kings. (राजोप योगि शास्त्रं यस्मात्).

But if we look to the real state of affairs we find to our sorrow and disappointment, that astrology is the exploiting ground for amateurish dabblers and professional pretenders. Sri Nilakantha Dikshita indulged in gibes at the expense of astrological quacks of his day:

अपिसागरपर्यंता विचेतव्य वसुंधरा ।
देशोद्यरंतिमात्राडपि नास्तिदैवद्वर्जितः ॥
वारान् केचित् केजित् दक्षाणि जानते ।
त्रितयं ये विजीनंति ते वाचस्पतय:
स्वयम् ।

सर्वं कोटीद्वयोपेतं सर्वं कालद्वयावधि ।
सर्वं व्यामिश्रमिवच वक्तव्यं दैव चिंतकैः ॥
निर्धनानां धनप्राप्तिं धनिनाधिकं धनम् ।
ब्रूवाणाः सर्वदाग्राह्याः लोके ज्योतिषिका जनाः ॥

The poet's words are only too true in regard to the prevalence of predictive astrology in modern times. To predict or speculate on destiny is such a sweet pastime that not only professionals but everyone capable of a little vanity and happening to know the ABC of the science picked up from books or hearsay shrinks not from staking a throw.

It is not customary in our part of the country to cast the horoscope scientifically marking the degrees and enriching the data which shall form the basis of the reading sought for, with all necessary details. And there are *Vakya*, *Siddhanta* and *Drigganita* methods which give conflicting calculations of *tithis*, *nakshatras* and planetary positions. Custom and tradition and almost a sacrosanct religious faith pin certain people to certain systems and no thought is wasted upon the question which system is scientifically accurate. The client takes the deplorably meagre and error-ridden chart to the astrologer who without in the least seeming hampered by the lack of the essential calculations and without passing for a moment to check up the soundness of the material supplied, proceeds with audacious gusto to make his pronouncements in most emphatic terms, now growing eloquent on the magnificence in store for the native and now spurting out alarming prescience of impending calamities for him. When he speaks of kendras he is wrong; when he refers to aspects and conjunctions he is wrong; when he draws conclusions from lordships and occupations of houses he is wrong. For him the twelve Rasis are twelve distinct mansions partitioned by impenetrable walls, however invisible, and it is all the same for him if birth is in the first or the 15th degree of a Rasi and a planet is in the 15th or 30th degree of another Rasi or *vice versa*. Even as he does not care to make accurate calculations of the planetary positions in relation to the exact degree of the rising sign, he never thinks also of making a correct study of the interplanetary relationships.

But some of these astrologers are *Upasakas* and men of religious merit and their trust upon their intuition dependent upon the grace of the *Ishtadevata* does not invariably betray them; and they go on well indeed with a swing towards an abundant practice. The students of the

(*To be continued*)

FUNDAMENTAL PARTICLES

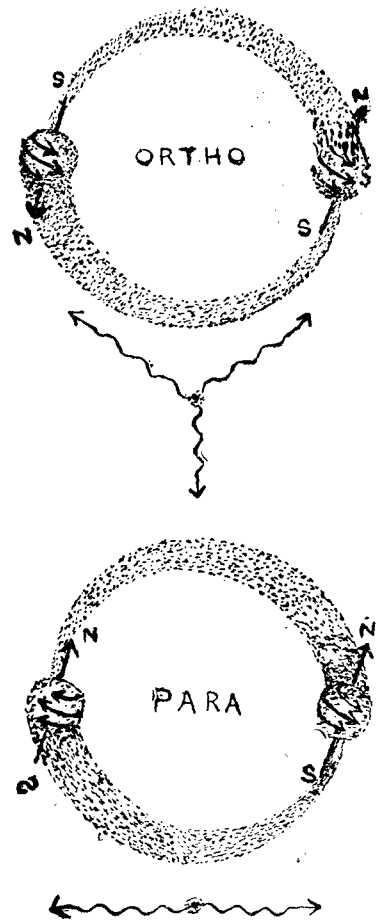
(*Continued from page 51*)

detected by means of scintillation counters.

The life of positronium atom is very small as judged by our standards of time. From the moment the atom is formed it survives for no more than a tenth of a millionth of a second. The ortho variety lives for less than just two ten millionths of a second while the para variety is still more transient: it lives for a tenth of a billionth of a second. Inspite of their flickering and fleeting lifetimes they dance for a pretty long time and revolve at least a million times before they give up their material existence.

An observation of the spectrum of positronium confirmed the validity of the proposed model of its atom. The absence of a nucleus makes the diameter of the positronium atom double that of the atom of hydrogen. The wavelength of the corresponding line of the atomic positronium should be double that of the hydrogen line; and so it was actually found to be.

Starting with two fundamental particles, electron and proton, we have reached a number about 20; we are not sure we have reached the end. In the scientific quest we find that new tools and new methods unravel new



and untrodden lands and the time for crying halt seems to be ever receding. But the human intellect is never tired of exploration and it never satisfied with the progress made. It is out to know the ultimate truth; it may be a few years hence or some centuries hence. In the meantime it cannot rest.

[The Editor does not hold himself responsible for the views of his readers. Constructive criticism is always welcome. Vituperation and innuendo will not be permitted. While the Editor encourages healthy controversy on subjects relevant to THE ASTROLOGICAL MAGAZINE, he must remind readers that claims on the available space in this column are heavy. The Editor, therefore, requests readers to be as brief as possible in all letters submitted for the correspondence columns.—*Ed., A.M.*]

Drawbacks of Western Astrology

Sir,—I give the greatest importance to Rahu and Kethu and have given the positions of the Nodes in my third book "1001 World-Political Horoscopes", pages 160—238. But it is true that my publisher (Baumgartner in Warpke-Billerbeck/Hann) has often cancelled the positions of Rahu and Kethu. This is incorrect. Rahu and Kethu are very important in our science (not merely in connexion with the eclipses), *and I calculate and consider Rahu and Kethu constantly.* I am convinced all leading astrologers in the West in general and Germany in particular consider the positions of Rahu and Kethu in their researches. There exist no "drawbacks" in Western astrology with regard to Rahu and Kethu.

Berlin. E. H. TROINSKI.

All-Kerala Astrological Association

Sir,—It is highly scholarly and scientifically thought-out and carefully worded address which you have delivered before the Trichur Conference. Lovers of astrology should feel grateful to you.

But, I doubt, if the Universities will lend ear to your suggestion to institute courses in astrology.

Madras. Dr. R. NAGARAJA SARMA, M.A., PH.D., D.LITT.

Sir,—I am in due receipt of the November 1958 issue of THE ASTROLOGICAL MAGAZINE and I was indeed very much impressed by your address delivered at the All-Kerala Astrological Association, when I went through the magazine. It is simply superb. You have dealt with the subject in a most scientific manner at every step. It is quite welcome. All will definitely accept anything if it is scientifically proved. Due to the dearth of such a scientific and methodical exposition of facts, the noble science of astrology had begun to wane gradually in its glory from its grand position or status. Such an attitude is highly welcome and essential nowadays towards the science of astrology, nay, to all the Indian sciences, to restore their lost dignified position. Mr. K.K. Kurup has not erred in selecting you to do the inauguration.

My grandfather, late Sri Rayasam Subbier of the Tiruvavaduthurai Adheenam Mutt, used to tell me often very high of your illustrious grandfather late Prof. B. Suryanarain Rao who was one of his best friends and who took great pains and efforts to restore the science of astrology to its lost status which are too well-known to your readers, to be mentioned here.

How true is the dictum or saying of our seers of yore that the grandson will portray the qualities of the grandfather! How true is the same in your case?

I warmly congratulate you on this and wish you, as also Mr. K.K. Kurup and the Association, every success.

With my best respects,

Tiruvidaimarudur. R. PICHUMANI.

Casualty Tracks in National Astrology

Sir,—With regard to the criticisms of Mr. Fagan re. my letter to you in the September 1958 issue, may I be permitted to reply to him as follows? Most of his remarks require a large amount of space for full discussion, as they touch the very foundations of astrology, but in the sequel I shall try to be as brief as possible.

It is true that the word "Capsolar" was coined by Mr. Allen to indicate the Sun's ingress into the constellation Capricorn, and I have merely used the word to indicate precisely the same event; which I do not think is an offence unless the word was copyright. Mr. Fagan had never previously seen a Capsolar chart in print. May I ask him to read Mr. Nixon's article in the February issue, wherein he states: "In previous articles I have already presented to Indian readers the ingress maps for Makara and Mesha". That is one instance. Perhaps Mr. Fagan is not acquainted with our local almanacs; but if he was, he would have known that almost every such almanac draws charts for the Sun's entry into every sidereal zodiacal sign, and draws predictions therefrom, and have been doing so for the past half a century at least. Again Prof. Raman in his book *Hindu Predictive Astrology* (my edition dated 1947) states: "Mark the horoscope for the time of entry of the Sun into Aries, Cancer, Libra and Capricorn." These, of course, refer to the sidereal zodiac. Lastly, I may inform Mr. Fagan that so great was the importance attached to the Capricorn and Aries ingresses (known as Sankrantis) that some decades ago these two days were general public holidays in this part of Western India. With Mr. Fagan's statement that "without the true value of the Ayanamsa no Capsolar chart would be considered of any value", I certainly agree, but nevertheless the practice of setting these ingress charts has been widely used in India and with some measure of success. Mr. Allen gives little importance to the Aries entry, still both the Aries and Capricorn charts were deemed to be important by the ancients. Perhaps if Mr. Allen were to re-examine his records, and redraw the Aries charts deleting the correction to the Ayanamsa due to the aberration of light which is a maximum at the Aries and Libra entries, and zero at the time of the other two entries, he might get better results.

It is true as Mr. Fagan states that $15\frac{1}{4}'$ will not bring the planet exactly from the meridian to the descendant, etc., for high latitudes, and I knew this when I wrote about it. But my object was not to write scientifically but to point out to lay readers that other values of the Ayanamsa are quite possible even with the conditions laid down by Mr. Allen. Indeed, Mr. Fagan himself confesses that $30\frac{1}{2}'$ will do the trick so far as the meridian and I.C. are concerned; and further agrees that the "true" value of the Ayanamsa can be obtained with great accuracy *once an approximate value of* it has been fixed. This has exactly been my contention, indeed he has used almost my own words. But whereas I am pushing this to its logical conclusion and import, Mr. Fagan seems to shy like a frightened horse from its implications. It is exactly the "approximate" value (which once was scientifically exact) which I am questioning.

Mr. Fagan is very indignant re. my remarks about bringing a malefic to an angle. Nowhere have I stated that

Mr. Allen lays any such claim. But if Mr. Fagan carefully re-reads my original letter he will find that in the second para of that where I have made this statement I have wholly addressed myself to refute the criticisms made by Mr. Nixon. Now if he reads Mr. Nixon's article, he will find that he states "It is difficult to decide..... whether he is in favour of the Cap-solar chart or not and *the methods employed*... Mr. Cyril Fagan's insistence on the importance of the planets in the foreground... Mr. Kharegat has the temerity to make predictions by using this very *method* of the angularity of the malefics which he also condemns". Evidently Mr. Nixon was under the impression that bringing the malefics to angles was the invention of Messrs. Fagan and Allen, at least that is how I understood it and still do so. Read in this context my remarks are perfectly fair and reasonable, as I merely pointed out to him that this was an ancient method employed and even quoting references. I believe that even Ptolemy employed this method. Mr. Fagan's indignation is therefore unreasonable.

With regard to the navamsa, Mr. Fagan himself states that minute differences in the value of the Ayanamsa give correspondingly large differences in the values of the navamsas ; and it was precisely for that very reason that I had originally suggested the use of the navamsa diagrams for the determination of the true value of the Ayanamsa. That such a determination can only be approximate is evident for the fact that the extent of the division is 3° 20′. Therefore on an average the value should be capable of being fixed to at least half this extent. However, that is now only of academic interest since Mr. Allen's method is much more sensitive.

Mr. Fagan agrees that as regards his own approximate value no rigorous proof exists, "except the evidence established by Garth Allen". I do not believe that the latter evidence was of any great value, unless Mr. Allen by further researches can *prove* that no other value of the Ayanamsa will give as good results as those now obtained by him on the basis of Mr. Fagan's approximate value. May I also draw his attention to the fact that 6′ is 0.1° and not 0.01°. Perhaps this and the other figure of 0.03° is a printing error, if not then 0.1° is more than three times the probable error.

Mr. Fagan has given an example of a moron and a scholar born on the same day and at approximately the same time. Unfortunately, he does not give details of the times at which they were born so that we can make detailed comparisons of the two charts for ourselves May be facts are as stated by Mr. Fagan, but it might be noticed that he himself gives no answer to his own problem, but merely makes the general statement that "all that befalls the native is not shown in the horoscope of birth". I would slightly amend this statement to read "all that befalls the native may not be apparent from his horoscope". With this amended statement all astrologers will agree. For, as yet, astrology is hardly a science but is still largely an art. It is our defective knowledge and there is probably no inherent impossibility that stands in the way of our reading everything that befalls the native from his chart. However that may be, all this is hardly relevant to the question that was originally raised namely that directions only time the event and may perhaps show in detail the nature of the event, but such events must be shown in the original chart. Charts very like each other in times, etc., are fairly common in astrological literature, and will become an increasing problem as the rate of population increases in future. I would however like to draw the attention of Mr. Fagan to two remarkable cases. One is the case of the twins given in Quarterly *Journal of Astrology* of Mr. Carter. These twins had identical accidents and of an identical nature, though one was in Australia and the other in England, and not only once but on three separate occasions was this identity of times and nature of accidents maintained (incidentally, what happens to locality charts of solunars, when one is in England and the other in Australia ?). The other case is that given by Alan Leo where a labourer (I am quoting from memory so that the exact status escapes me) was born at the same time and locality as King Edward VII. In this case also events (that is directions) ran parallel in the two cases. Evidently both horoscopes showed social rises, illnesses, etc., and the directions indicated the times which were identical. If Mr. Fagan still does not believe, may I ask him what made one man a moron and the other a scholar in his own case ? Surely he does not seriously imply that it was the directions, that is, the solunars of the one turned him into a moron and those of the other into a scholar? For unless he implies this the case and the whole discussion is harldly relevant. In any case the subject is too vast to deal with here and I would suggest to you, Sir, that you invite the opinions of astrological scholars on this, and publish them in your magazine.

Mr. Fagan refers me to Mr. Allen's "Open Letter" as to why no bomb was dropped on Vladivostock at the same time as it was on Hiroshima. I have replied to this in another letter to which I refer Mr. Fagan but to recapitulate, Mr. Allen's arguments boil down to these two statements: (*a*) Any one who puts such questions is either silly, unscientific and unintelligent or all three I suppose. (*b*) Why some things happen at one place and not at another is that the conditions are favourable at the former place but not at the latter. Evidently, Mr. Fagan considers this as an adequate and complete reply. I must be very silly, etc., for I am still unconvinced especially as I think that the reason (*c*) savours of the fallacy of "begging the question". If he refers to Mr. Nixon's article he will find a much more intelligent and reasoned answer, with a frank confession (which is the true scientific attitude) of inability to explain certain circumstances.

I was very interested to learn that Mr. Fagan had made a study of the horoscopes of many (how many ?) of the victims of the "Titanic" disaster ; and that Mr. Fagan had found no common planetary pattern and hence his previous generalisation. May I ask Mr. Fagan with all due respect that if he has not found any common ground, are we to take it as final that no such ground can ever be found ? or that no such grounds actually exist ? Time and again in the history of science we have found that whereas correlation of apparently unconnected facts has escaped the notice of even highly educated persons, and secrets of nature which have stubbornly resisted some have been laid bare by others, and generalisations of the kind made by Mr. Fagan are both inappropriate and inopportune. Further, if Mr. Fagan maintains that the horoscopes of all passengers were subservient to those of the captain, how comes it that out of a total complement of 2224 persons carried, only 1517 perished? (See Ency. Brit. 12th Edition, Pp. 732). Why did only about 70% die, and not the whole lot, *i.e.*, 100% ? What was there in the horoscopes of the other 30% that they were spared ? Unless Mr. Fagan can answer these questions satisfactorily, his generalisation is worthless.

Mr Fagan wonders if I am familiar with "modern" statistical methodology. On the other hand, I am wondering whether Mr. Fagan knows anything about it. Merely in passing I may mention that I was a statistician to a large public utility for over 30 years and am acquainted with all its

branches, and its tests of significance, both parametric and non-parametric. Mr. Fagan's remark about this being "the only science that can prove or disprove...all teachings" betrays his ignorance of what statistics can or cannot do. No amount of statistics can "prove" or "disprove" anything, it can only point out the probabilities with statements (the so-called null hypothesis) which can be made or rejected. Also there is no necessity for a sample to consist of "hundreds or even thousands of cases". The statistical techniques developed by Sir Ronald Fisher are quite adequate to deal with very small samples for certain purposes. If a "fully qualified" statistician *demands* that only one angle at a time be considered I suggest that Mr. Fagan do not employ him, he does not know his job. Of course, it would be *preferable* to consider only one item at a time but it is not *necessary*, else how would he be able to predict, say wheat yields, which depend on the simultaneous variation of several factors which are under only partial control, or like the weather not controllable at all? I therefore repeat that modern statistical theory with its many tools like multiple and partial correlations, analysis of variance, etc., can and does tackle jobs that consist of many factors which vary simultaneously, and hence Mr. Fagan's apprehensions are unfounded.

When I had first learnt of Mr. Fagan's solunars in an article in this magazine in 1953, I was very enthusiastic. But actual experimentation in quite a large number of cases has convinced me that his method is not adequate because it is unduly simplified and therefore of very little value for prediction purposes. Ordinary or orthodox methods of prediction gave far better results, but of course they were then no longer solunars, they were Varshaphal charts which had been for centuries in use in India!

Bombay. K. M. KHAREGAT.

Transit Results

Sir,—In Hindu Astrology transit results are usually judged with reference to Chandra Rasi, *i.e.*, the sign occupied by the Moon at birth. During the past few years, I, too, have followed this practice. It has, however, been my experience that in a number of cases the results have not been correct.

In April last an incident occurred, which has set me to think. I had been invited to a friend's house for dinner in the evening of April 18. I did not feel quite well after returning home. In the morning I developed acute indigestion, flatulence and constipation and sore throat and hoarseness. Later, I found that my friend also developed the same sickness on the same date, though other persons who partook the dinner had no such trouble. Our dates of recovery also coincided.

My horoscope and that of my friend are given below :—

(*a*) *Horoscope of self*:—Sun—4°; Moon—173°; Mars—109°; Mercury—7°; Jupiter—353°; Venus—49°; Saturn—79°; Rahu—281°; and Lagna—101°.

(*b*) *Horoscope of friend*:—Sun—5°; Moon—329°; Mars—355°; Mercury—22°; Jupiter—22°; Venus—6°; Saturn—93°; Rahu—262°; and Lagna—273°.

It will be observed that the position of the Moon in the two horoscopes is different, while that of the Sun is practically the same. It, therefore, occurred to me that the position of the natal Sun might be important and that the practice of Western astrologers of taking the sign of the radical Sun for judging transit results might deserve consideration.

On April 18, 1957, the planets were situated as below :—Sun—6°; Moon—230°; Mars—58°; Mercury—25°; Jupiter—151°; Venus—7°; Saturn—232°; and Rahu—209°.

This combination cannot be said to produce the ill-effects on health described above on the persons possessing Virgo and Aquarius Rasis as myself and my friend do. However, if we judge the results for Arfes (the sign occupied by the Sun in our horoscopes), they are accurate. Mars occupies the second sign from Aries and Saturn and Moon the eighth; moreover, they are in opposition. Hence, the troubles pertaining to the throat and abdomen occurred to both of us and those, too, simultaneously.

Saturn for the owners of Virgo Rasi has moved into the third from October 1955. Saturn in the third is good. Naturally, I expected good results for myself. But during this period, the results have been contrary to my expectations. Viewed from Aries, Saturn is in the eighth, which is notoriously bad. Evil results are, therefore, justified.

The Rasi is the focus through which transit results operate with reference to an individual. In view of the observations made above, I am inclined to believe that Chandra Rasi is not necessarily the Rasi for this purpose. We have to select the strongest Rasi out of those occupied by the Lagna, the Moon and the Sun, and then judge transit results with reference to the same. In this connection, it may be stated that the strength of the sign is to be judged from the strength of the owner of the sign, the planets posited in it and also from the numerical strength of the planets posited in that sign.

I have tested this method on a number of horoscopes and have found it correct. Discrepancies which could not be explained through the usual Chandra Rasi method can easily be explained through this method. It would also be clear that the determination of the Rasi of a horoscope is a necessary prerequisite for a correct prognostication of results.

Lucknow. R. D. GUPTA, M.A.

Psychic Mediums

Sir,—Mr. K. Viswanathan's article on page 813 in October 1958 issue of THE ASTROLOGICAL MAGAZINE under the caption "Locating the Hidden Treasures" has induced us to send you this article for publication.

We are obliged to Mr. Viswanathan for thinking on the subject, and writing on it, and our effort is to give our readers an idea of the Ceylon Science of depositing and recovering treasures. There are hundreds and hundreds of said treasures buried or hidden specially, deposited in "Dagobas" (*i.e.*, Pagodas), prohibited from excavation or removal, while there are many more in almost all parts of the country, which can be taken, but the Archaeological Deparment has now completely prohibited from interfering with any treasure. But the science is there, kept as one of the greatest national secrets. But in many instances thieves had entered into treasures, in jungles and had stealthily removed gold, precious stones and jewellery, including images of silver and gold, worth lakhs and lakhs of rupees. Sometimes, the thieves are caught and charged criminally, and it is a common sight to see such cases in our village courts being proved, and accused sent to jail.

The most important thing in locating a treasure is to get hold of a good, and reliable psychic medium. Once such a person is available, the rest is plain sailing. On one occasion, we were entrusted with the excavation and removal of a treasure, which was well known; it is in a place called "Pannala" about 40 miles from Colombo. The property on which the treasure was located, is a flat rock and a very large circle was to be found carved on it, showing the extent and exact location of the treasure. About a thousand years ago, one of Ceylon's greatest King's—(poet to boot)—had kingdom in this area, and the treasure is supposed to contain his *regalia*,

and all his wealth, perhaps gold, worth millions of rupees. It was owned by one Mrs. Effie Dias Bandaranaike, the consort of Sir John Kotalawala, who at this time was Ceylon's Preimer.

As luck could have it, in Mrs. Bandaranaike we found a medium of great psychic powers, and we at once utilised her services. It so happened, Mrs. Bandaranaike told us, that every two or three months, an old man clad in white, with a flowing beard, used to appear to her in her dreams, and say to her: "Daughter, we are guarding your treasure, yonder; and have been doing this so long! why not take it?, can we do this for ever?" This phenomenon used to appear regularly, and on many occasions her servants attempted to blast the rock, and burst into the treasure, but with fatal consequences. Our services were called in at this time, because of fatal results, suffered by novices.

We explained that all valuables in the bowels of earth are guarded and protected by *Gnomes* or *Bhairavas*; unless you get directions and permission from them, it would be highly dangerous, and even fatal to approach to excavate a treasure, even when it is fully known where it is found. The *Gnomes* or *Bhairavas* can be easily called in, as we did in this case, through our host, Mrs. Bandaranaike, from whom full details of the incident can be got. We contacted the *Gnomes* in charge of this treasure, through her medium, by getting her to invoke the *Gnomes* by reciting *Bhairava* invocations–324 times she seated round a circle of scraped cocoanuts, with plenty of other offerings. This is the usual way of invoking these spirits, according to the Ceylon Science of location and removal of treasures.

The chief *Gnome* or *Bhairava* actually appeared to her in a dream on this night in response to her call—and according to Mrs. Bandaranaike, the *Gnome* said to her: "Daughter", I am the *Bhairiva* that came to you on so many occasions. You are now in the correct path, leading to the treasure which is your property. My Daughter, *three moons* from today, you collect 14 people—7 men and 7 women, of whom you should be the leader. You all must be clad in white. With white lamps in your hands, form yourselves into a procession and come into the place of the treasure, singing our *sastras* (hymns). Form yourselves into a circle, upon the treasure on the treasure rock—"Then let your *Guru* start the pujas, and then, reciting *mantram* and the (scientific) spiritual rites, all well-known to your *Guru*, we shall then open the treasure, and it is for you and your friends accompanying you to remove the treasure deposited by your great King thousands of years ago and left us in charge."

Mrs. Bandaranaike gave us this story in the following morning and the same spread far and wide—as being a unique event in the history of our land! The Ceylon and foreign press men flocked in to her as it afforded wonderful "copy" for them. But the moment Sir John Kotalawala the Premier, at the time, came to know what was going to take place, he firmly put his foot down and stopped all further proceedings as, apparently he feared it would have brought into prominence her or his exploits with his late "consort" with whom his associations during the period of marriage, did not bear much scrutiny; —that was how the great attempt to explore a wonderful treasure in Ceylon, ended.

This account is useful as every word of it can be verified by reference to Mrs. Bandaranaike. It also proves that there was nothing like this Ceylon Science found in any other country for locating and securing treasures. In the event of any party wishing to locate and secure treasures, hidden or concealed in India or in any other part of the world, we can easily invoke *Bhairavas* in charge of it, and always exploit the same successfully from Ceylon. We can even undertake to train any person, especially ladies willing to act as medium, if they join our circle, when they can go through a special course of training, upon which each of them can set up herself as medium fully conversant with Ceylon Psychic Science, in relation to locating treasures, etc. Training is free under the Director, which will last for a few months, the only expenditure involved being for one's food and lodgings in Ceylon, which will be arranged by a member of the circle, or the Director himself—on application.

Supreme Court
Notary, Colombo. DAVID DE SILVA.

Saradeepa Sakti Yoga

Sir,—Varahamihira in his *Brihat Jataka* (Chapter 11) describes Raja yogas from slokas 2 to 18 brought about by the position and strength of the seven planets in the 12 signs of the zodiac. In the next Chapter 12, the author deals with what are called Nabhasa yogas. These are again divided into *Akruti, Samkhya, Asraya* and *Dala* yogas.

Yavanacharya mentions 1800 Nabhasa yogas. These yogas have been condensed into 32 yogas by Varahamihira in his *Brihat Jataka*.

The 13th Chapter of the *Brihat Jataka* deals with Chandra yogas or lunar combinations. These have been dealt with by me in THE ASTROLOGICAL MAGAZINE for March 1954.

There is no mention in any of these chapters of a yoga called Saradeepa Sakti Yoga. This yoga is mentioned by Kaka Bhujandar in one of the readings of the horoscopes dealt with by him.

I give below the horoscope of the native in Nirayana system wherein this yoga is described :—

Rasi:—Ascendant – Virgo; Saturn–Scorpio; Moon – Capricorn; Kethu–Aquarius; Jupiter – Pisces; Venus and Mars – Gemini; Sun and Mercury–Cancer; and Rahu – Leo.

Navamsa:—Ascendant – Leo; Moon and Saturn – Virgo; Mars – Libra; Kethu – Scorpio; Sun and Jupiter–Capricorn; Rahu and Venus – Taurus; and Mercury – Cancer.

The Saradeepa Sakti Yoga is peculiar to the persons born in Kanya or Virgo. This yoga affects the native in Saturn's period in his own or *Swabhukthi*. It is brought about by the lordship of the 5th and 6th houses of Saturn and by the occupation of the 3rd house, Scorpio (from the ascendant). Saturn has also the aspect of Jupiter from Pisces. Bhujandar says the effect of the yoga drives the native into indigence. The domestic peace of the native is disturbed and there will be acute mental agitation. Lastly, the native will be forced to live outside his place of

Leprosy

Sir,—I have read with much interest the article written by Dr. Jagannath Rao under the caption *Combinations for Leprosy* in the August 1958 issue of THE ASTROLOGICAL MAGAZINE. One of my friends is having similar combinations as described by the learned author, and is now under treatment here. The author claims that white leprosy is different from ordinary leprosy, but has not mentioned any combinations for that disease. I hope he will publish soon an article devoted completely to this subject as many men and women suffer from this disease and are condemned for marriage, etc. in the society.

I have also read the book *Predictive Astrology* written by the same author and find it very interesting. He has made the principles of astrology easy to understand and his treatment of the *Bhavaphala* and *Gocharaphala* is really exhaustive. We are glad that he being a doctor has taken so much interest in this occult subject. And one should admit that but for your magazine, most of the educated men would have never exerted themselves in this line. May God give you strength to serve the nation for a long time. Will you kindly publish this letter in your valuable magazine and oblige ?

Hyderabad. K. RAMANATHAN.

Saturn and Makara Lagna

Sir,—With reference to Mr. Sastri's letter on the above subject on page 999 of THE ASTROLOGICAL MAGAZINE, November 1958, Mr. Sastri will please furnish the full horoscope with Rasi and Amsa diagrams, balance of dasa, time, date and place of birth, to enable a full assessment of Saturn's Mahadasa results. It is rather surprising that Saturn in Makara Lagna should give bad results. All standard works on astrology proclaim that Saturn in Makara Lagna is good.

Trichy. N. SUNDARESA IYER.

A Tragedy

Sir,—Mr. R. Ramaswami has given in September 1958 issue of THE ASTROLOGICAL MAGAZINE the horoscope of an unfortunate bride who married in May 1957 and was widowed within the all too brief period of 5 months, inspite of the fact that her husband also had a corresponding *Kuja Dosha* and has requested the readers of your esteemed journal to throw light on the astrological causes for such an early widowhood.

In the first place, I think, it should be clearly understood that the mere fact that each of the partners to the union has a *Kuja Dosha* does not necessarily remove the yoga for "widowhood" if it be present in the horoscope of a girl for the simple reason that it is not the *Kuja Dosha* alone that is responsible for "widowhood" in a female nativity for the "widowhood" may be due to the weakness of the lord of the 7th house or the weakness of the *Karaka* or significator of that house (*i.e.*, Jupiter in the case of female nativity).

In the second place, it would be observed from the horoscopes of the couple that while Mars is occupying the 7th house (one of the houses stipulated in the definition of the term *Kuja Dosha*) in the case of the bride's horoscope, it is in the second place (house) in the case of the boy and thus does not constitute the dosha in that horoscope.

लग्ने व्यये च पाताले जामित्रे चाष्टमेकुजः ।
वरः पत्नी विनाशायकन्या पतिविनाशिनी ॥

From the above sloka it is clear that the 1st, 4th, 7th, 8th and 12th are the only houses stated to be relevant, to the *Kuja Dosha*.

In any case, the main point I am concerned with in this letter is the accuracy of the horoscope (of the bride) which I doubt very much. We have not been told about the latitude of the place of birth of the bride hence it is not possible to verify whether with Gh. 35-57, the Lagna Cancer is possible but this much is certain that near about and below latitude 13° the Gh. 35-57 will definitely give for date 30-11-1935 *Mithuna* and not *Cancer* as Lagna. Thus if the birth is near that latitude 13° (and I guess it is so from the fact that the correspondent is a South Indian gentleman) the Lagna will be Mithuna—alas, a most unfortunate Lagna, sometimes, for a lady to possess for the very simple reason that if Guru (Jupiter) happens to be weak, its weakness will mean the weakness not merely of the *Karaka* of husband but also of the lord of the 7th house. And if by unfortunate bhava the 7th house for such a lagna also is under malefic influence, then God help such a lady for then all the three factors standing for the husband, *viz.*, the 7th house, the lord of that house and Jupiter the *Karaka* for that house would be suffering and thus indicate an early demise of the husband or widowhood for the wife as in the present case with Mithuna Lagna.

With Cancer as the lagna of the lady, no doubt, there are malefic influences on the 7th house and its *Karaka*, *viz.*, Jupiter; but Sani—the lord of the 7th house being in the sign Kumbha its *Moolatrikona* and in the 8th house will be very strong and will prevent any astrologer from predicting "widowhood". But the story with Mithuna Lagna will alas be different for her; in addition, the lord of the 7th house too would be in almost total eclipse and under the strong malefic aspect of Saturn.

As regards the longevity of the husband, from his own horoscope it will be noted that Venus lord of Lagna is in Lagna but is not having the influence of any planet. The peculiar position created by the absence of any influence on the Lagna and its lord definitely weakens the Lagna and consequently the longevity more particularly when the kendras are devoid of benefics and the house of longevity (8th) is suffering by the aspect of as many as 3 malefics. Sani the *Ayushkaraka* is weak in an inimical sign with two malefics. *Alpayu* or short life is thus astrologically justifiable.

Kanpur. J. N. BHASIN.

Sir,—Reference the letter of Mr. R. Ramaswami published on page 845 of your magazine for September 1958, permit me to make a few observations on the horoscopes.

The star or asterism is not given to calculate the Dasa. In the bride's horoscope, Saturn in 8th gives long life. *Mars Dosha* is powerful being in the 7th with *Lagnadhipathi*. Again in her horoscope on both sides of Moon are malefics. In the bridegroom's horoscope planets are only on one side of Moon, lessening its strength thereby. For Thula Lagna, Guru, Kuja and Sun are malefics. Guru and Sun are *marakas*. Leaving Moola, if we take Poorvashada to be the star for him, he must have died in Kuja or Rahu Dasa. If Uttarashada be taken as star he must have died in Rahu Dasa. Lord of 8th is in kendra. Guru is in 6th (own house) with aspect of Sani. Rahu is in 8th ((exalted). Mars dosha was not balanced.

In the girl's horoscope Kuja dosha is strong. Mars is exalted. In the groom's horoscope, Mars in own house in the 2nd is not strong enough to oppose the *dosha* of the girl. The horoscopes were not properly matched. There might also have been *dasa sandhi*. The groom's horoscope is not strong inherently while the girl's is. Further details of the girl may be useful for study.

In another *horoscope of a female in my possession, Mars in 7th is more powerful. She became a widow after

*Lagna—Virgo; Rahu, Venus and Jupiter—Aquarius; Sun, Mars and Mercury—Pisces; Saturn—Taurus; Kethu—Leo.

about 12 years of married life in the prime of youth. She has 3 children. In the girl's horoscope given by Mr. Ramaswami, Mars is exalted. *Doshasamya* has to be carefully calculated.

Bombay. K. VISWANATHAN, B.Sc.

Putra Viheena Yoga

Sir,—With reference to the letter on "Putra Viheena Yogas" published in the July 1958 issue of THE ASTROLOGICAL MAGAZINE, a mere glance at the chart in question is sufficient to indicate that the native has got a *dosha*, namely, Sarpasapa, to his lot, due to the presence of Rahu in the sign of Mars identical with the 5th house (*vide* Yoga No. 212, *Three Hundred Important Combinations*, Part II, by B. V. Raman). Not only that but the elements governing the house of issues, being heavily afflicted, is another significant feature worthy of note. Mark the 5th house being occupied by neecha Saturn and Rahu. The 5th lord Mars also happens to be the lord of the 12th house (*Durităm*). As such, he occupies the *Durithasthana*—his own sign—and subjected to Papakarthari Yoga (also Subha Karthari Yoga). Putrakaraka Jupiter, no doubt, aspects the house of children, but is combined with Kethu and afflicted further by the cruel aspects of Saturn and Rahu. Besides being Putrakaraka, Jupiter is the lord of Lagna and 4th house (*Sukham*). It will be very significant to note that Jupiter as such occupies a *dwirdwadasa* (2nd and 12th) position with respect to the lord of issues.

When viewed from the Moon, the 5th house Thula is occupied by its own *Karaka*. It is held to be quite inauspicious for a *Karaka* to occupy a house for which he stands as a *Karaka*. Again, the 5th house is afflicted by the occupation of Kethu, and by Saturn and Rahu as well. Likewise the 5th lord Mars from Lagna, the 5th lord Venus from the Moon also happens to own the 12th house (*Durităm*) and is combined with his bitter enemy, the Sun, in the 7th house. It may be noted that Putrarudha falling in Gemini is occupied by the 8th lord Moon and subjected to evil aspects of dire malefics like Saturn and Mars, and by the afflicted Jupiter as well. The 5th house (Kumbha) from Jupiter is aspected by Kuja while its lord Saturn is debilitated and combined with Rahu.

Since the 2nd house indicates family development and the 7th house the source thereof, the importance of these two houses cannot be lightly brushed aside. Though the 2nd house is aspected by its own lord, but it is an aspect of a neecha and afflicted lord of that house. From the Moon, the 2nd house is squared by Saturn, while its lord, the Moon is subjected to the malefic aspects of Saturn and Kuja. Jupiter is also the *Karaka* for the 2nd house, but he is afflicted as stated above. Though the 7th house is aspected by its lord as well as *Karaka*, it will be seen that it is occupied by the 8th lord, and further afflicted by the malefic aspects of Saturn and Mars. Moreover, the 7th lord and the Kalatrakaraka are combined with the Sun.

Now, if we take the 5th house as the native's past life, the Sun happens to be the lord of issues. As such, he is combined with his bitter enemy Venus as well as Mercury, who happen to be the lords of the 7th houses in past life and present life respectively. Likewise the *dwirdwadasa* positions between the lord of issues and the lord of Lagna in the birth chart, the same positions of planets in the native's previous life also draw our attention. What is still more a significant feature in the chart is that Jupiter, who happens to be the lord of the 12th house (*Durităm*) in previous life of the native, is now acting as Putrakaraka as well as the *Karaka* for the 2nd house in the native's present life and as such aspects the *Putrasantana*. Saturn, the lord of karma or actions in past life, is debilitated in the house of issues, and in direct opposition to Jupiter, the lord of 9th house (religion) and 12th (evil deeds) in previous life of the native.

Phaladeepika, one of the standard authorities on the subject of astrology, states (Adh. XII, Sl. 6) that the following yogas lead to family extinction, *viz.*, the 12th, the 8th, the 5th and the 1st houses being occupied by malefics: Venus and Mercury in the 7th, Jupiter in the 5th and malefics in the 4th houses, etc. It is true that the above two yogas do not apply *in toto* to the nativity in question. However, it will be very significant to note that there are malefics in the 5th, the 12th and the 1st houses with reference to the former yoga, while if judged from the Moon, Venus and Mercury are in the 7th and Jupiter in the 5th in so far as the latter yoga is concerned.

Under the circumstances, it appears that the poor native will not be able to derive happiness of children. He should perform proper *shanthis* to ward off the doshas.

Nadiad. M. D. TRIVEDI.

ASTROLOGY FOR BEGINNERS

By B. V. RAMAN

TENTH EDITION

Are you prepared to demand the hidden facts of Astrological Science? Read this book and learn Astrology withouf effort. This is unquestionably the best for beginners. This is the first real effort to teach you Astrology in a simple manner free from all technicalities.

Why should you believe in Astrology; Basis of Astrology Fundamentals explained; Casting the Horoscope; Hints on Judgment; Longevity and Death; Predicting Personal Appearance, Character, Health and Disease; Educational and Financial Prospects; Means of Livelihood, Parents, Brothers, Enemies and Debts; Marriage and Children; Timing Events; Answering Questions; Predicting Transit Results, etc., etc.

"This little book is designed to give free from technic ities, at clear and concise exposition of the essential facts of Indian Astro logy, and achieves its object in an admirable fashion. The presens work does not, of course, exhaust what is known on the subject, but it is accurate and reliable as far as it goes, and is bound to prove oa considerable assistance to those who contemplate an initial study of Astrology". —*Times of Ceylon.*

Raman Publications

"Sri Rajeswari" : : BANGALORE–3.

BY DR. R. NAGARAJA SARMA, M.A., Ph.D., D.LITT.

1. OCCULT PHENOMENA IN THE LIGHT OF THEOLOGY—By Abbot Wiesinger, O.C.R.—(Burns and Oates, London. Pp. 294. Price 25 s. net.)

Occult Phenomena constitute a permanent and persistent problem which remains even today challenging and disquieting, notwithstanding the advancement effected in the different sciences commencing from the Copernican Revolution and culminating with the launching of Sputniks. The author's purpose has been quite a correct and legitimate one. He has been anxious to find and give solid and substantial support to the Occult derived from theological conclusions.

Two such conclusions have been given as foundational and fundamental. The first is that if man fell, even after the fall, he must have latent in him divine qualities, features and endowments which he must have had in full prior to the fall. The second is that when the soul or spirit, is freed from the limitations of bodily encasement, it is able to achieve certain extraordinary things which seems to be occult, supernatural and so forth.

Part I of the volume running to seven chapters, traces from the dawn of creation the relation between Body and Soul, and examines and interprets the phenomenon of fall. In the course of Part II, running to six chapters, the author's Theory is expounded in detail and Occult Phenomena are sought to be explained, on the basis of that theory.

Natural sleep, Pathological sleep, and Artificial sleep, and their conditions have been examined as illustrative and exemplificatory of the state in which the soul is able to get and enjoy freedom from bodily bondage. Such freedom will explain all occult phenomena ranging between ghosts, devils, haunting, black-magic, witchcraft, etc. and other forms of higher mysticism.

Attention may be drawn to the author's treatment of *Diabolical Possession* (Pp. 243-255) and in this country, one should be familiar with many instances of diabolical possessions and professional exorcists. Not merely this. Evil-minded persons practise black-magic and let loose evil spirits on their enemies who often suffer from mysterious neuro-muscular troubles. In Malabar and other places, there are professional exorcists who drive these evil spirits by means of tantric rituals and incantations.

It is obviously not possible to accept or endorse all the author says about *yoga*, *astrology* and other occult phenomena of India. The volume contains an important glossary of technical terms, but, there is an inaccuracy. Horoscope is not prediction. Students of religion and theology, the odd and occult will find the volume highly instructive and stimulating.

2. MAHATMA GANDHI-THE LAST PHASE -Vol. II-By Pyarelal-(Navajivan Publishing House, Ahmedabad. Pp. 887. Price Rs. 20 or Sh. 30 or Dollars 5.)

If one were to judge from the opinions of distinguished persons recorded in favour of this volume written by Pyarelal, Gandhi's secretary and close associate, it must be admitted that the work has been universally welcomed. It stands divided into five parts entitled respectively, Parting of the Ways, the Battle of Partition, Left alone, the Titan at Work, and the Journey's End, Appendices A and B, Notes, Glossary, and an exhaustive alphabetical Index make the work take its proper place amongst carefully edited and attractively printed publications.

A person not having his mind poisoned by political considerations and predilections, going through these pages, will have compulsorily to conjure up before him dreadfully disturbing pictures and visions of the partition or *dichotomization* of this great country into two, and all that followed in its wake, and he will address himself many questions to which, he would never get satisfactory or convincing answers—such as—has the division of India been a blessing or a curse? Are the people happy? Has Hindu-Muslim concord been restored, and so forth.

I direct attention of readers to the happenings of 30th January 1948 which are recorded with thrilling details and precise particulars, on Pp. 765 and sequel. In the concluding chapter entitled "Epilogue", the author has discussed two important questions: What message has Gandhiji for the present day world?

Going through the pages of this mind-stirring volume, it is impossible not to entertain certain reflections. In the days of Queen Victoria, the whole of India lying between the Himalayas and Cape Comorin was under a single Ruler. India became independent. The unity of the Victorian period has disappeared, peradventure, never to return. In this volume, reference has been made to Sir C. P. Ramaswamy Iyer, who was then Dewan of Travancore who soon after cessation of paramountcy of the ruling British power, proclaimed the independence of Travancore. The Nizam, it is observed followed suit. (Pp. 340). He who runs may read how rapidly conditions have changed, and today, the Pakistan brought into existence in the days of the Mahatma, has emerged into a new existence.

Gandhi had throughout his career advocated two articles of faith—one was *non-violence*, the other was *happiness and prosperity for the poor millions* of the country. It is generally not to be hoped for that the message of non-violence, whether proclaimed by Gandhi or by the Pope and others would be found acceptable to foreign powers like France, Britain, Russia and America. If the western powers did not care to follow the ideal of showing the other cheek when one is slapped, preached by the apostle of non-violence Jesus, it is not reasonable to expect that they will now feel fascinated by the doctrine of Gandhi.

In India itself, the recent labour disturbances, use of tear gases, lathi-charges and occasional opening of fire, here and there, would demonstrate that it is surely not non-violence of the Gandhian pattern that is the guiding factor of administrative policy of Independent India. Though a great deal of din and noise prevails about village-reconstruction schemes, plans and programs, a visit to any of these villages must convince that simple, poor villagers are by no means living in miniature models of earthly paradise brought into existence by followers of Gandhi (avowedly or confessedly) who are ruling Independent India.

How would Gandhi meet the atom bomb with non-violence?—was a question which an American correspondent addressed him just a few hours before his assassination. Gandhi answered that he would come out into the open without a trace of ill-will against pilot, and so on. It is

obvious that such attitudes and reactions cannot be universalized. For, in the day-to-day administration, followers of Gandhi who are present rulers have not maintained the policy of their Master.

Be that as it may. In all departments of life, food-stuffs, essential commodities, posts, railways, court-fees, house-building materials, and so forth, there has occurred an enormous rise in prices, which has adversely affected the poor villagers, whose welfare was the main concern of Gandhi.

Gandhi's confesstion of philosophical faith is recorded on Pp. 792. It is observed that Gandhi believed in *Advaita*. He said that he could not be happy when the humblest are not. Whether today, the humblest are being made happy, or whether the followers of Gandhi are flying round the globe as ambassadors, etc., staying and making merry in fashionable hotels, etc., it is for the tax-payers to decide.

Winning or gaining of freedom from foreign rule is one thing, but, utilization of the said freedom for the good of the masses is totally a different one. This truth is strikingly illustrated in post-Gandhian period.

When all is said and done, this authoritative account by Pyarelal will be welcomed by all students of Indian history and politics.

3. FOOTPRINTS OF GAUTAMA THE BUDDHA—The story of his Life and Teaching.—By Miss Marie Beuzeville Byles—(Rider & Co., London. Pp. 227. Price 16 s. net).

In the course of a very complimentary and commendatory "Foreword" contributed by Sir Lalita Rajapakse, Q.C., Ceylon's Minister of Justice from 1947 to 1953, it is pointed out that Miss Byles, born in England had made Australia her home, and pursued her career as solicitor of the Supreme Court of New South Wales. Here is a brilliant volume in which the teachings and doctrines of Buddha are portayed as seen through the eyes of a pious and devoted Christian Lady. She has sketched the life and teachings of the Master as narrated by Yasa, the sixth disciple of the Master. He had not met the Master before obtainment of Enlightenment.

Yasa tells the story of the ministerial life of the Master and gives an account of the teachings of the Master imparted in concrete settings to men and women endeavouring to solve some of the persistent problems of life and existence, sin and suffering. Miss Byles has taken care to point out that she is a disciple of Buddha and what she has written would be acceptable to orthodox Buddhists.

As an active member of the legal profession, she had scrutinized and carefully sifted the facts and data collected and indicated her conclusions. Miss Byles has very rightly explained that Buddhistic terminology is not to be confused or identified with Buddhistic Doctrine. Buddha tacitly accepted the Cosmology prevalent in his time. That Cosmology may not be acceptable to modern scientific minds. That would not matter at all. The Buddhistic doctrine of Four Noble Truths and the Eightfold Noble Paths would constitute the common heritage or property of the entire mankind without reference to geographical and other differences. Mankind may soon be sojourning to the Moon, Mars and Venus, but, it is certainly none any nearer solution of the problem of evil and suffering.

Life is inseparably intertwined with suffering. The Buddha showed the way to obtain freedom from suffering. Whosoever feels that life is dominated by suffering, and desires freedom from it, can walk the Path of Buddha, be he Christian or Moslem, or Parsi, and so forth. Miss Byles is strongly convinced that moral and philosophical problems stand exactly where they stood at dawn of creation. Modern Sciences have not solved these problems. Where the sciences have failed, Buddhistic doctrine may succeed. Miss Byles says it is the way that matters most—the way which leads to termination of suffering, here and hereafter.

As the Bhagavad Gita so aptly has it, one in a million, perhaps, would feel any attraction for the way. Students of higher thought would feel grateful to Miss Byles for her inspiring research-work on Buddhism.

4. THE JEWEL IN THE LOTUS—Recollections of an Indian Political—By B. J. Gould—(Chatto and Windus, London. Pp. 252. Price 25 s. net).

The title of the book is a bit misleading. It purports to be a rendering into English of the well-known sacred incantation—*Om Mani-Padme-Hum* familiar in Buddhistic and other Tantric circles. It is quite understandable that the title has been chosen as a tribute to Tibet and its characteristic civilization. B. J. Gould was a member of the old Indian Civil Service of the British Government, and his vastly diverse experiences, have been narrated in this volume, under the comprehensive and perfectly intelligible sub-title "Recollections of an Indian Political". The author entered the Indian Civil Service in 1907. The present narration commences with the celebrated and colourful Delhi Durbar of 1911, and ends with the Installation of the *fourteenth* Dalai Lama in 1940. North-West Frontier Province, Baluchistan, Afghanistan, Persia, North-East Frontier and Tibet were the scene of his activities in the narration of which the author has taken more than auto-biographical interest.

Sir Ernest Barker has contributed an appreciative "Foreword" in which the versatility of the author is rightly commended. The author concludes his "recollections" by making a reference to the future of the political evolution of Tibet and the Dalai Lamas. The author records that in 1950, the Communist Government of China invaded Tibet. The Dalai Lama fled to the Chumbi Valley, and subsequently, he returned to Lhasa.

The *thirteenth* Dalai Lama had drawn up something like a political testament, before his demise, it said. The Government of India is near to us and it has a large army. Likewise, the Government of China, has also a large army. Tibet should maintain firm friendship with these two. Both are powerful. The author concludes the volume striking a note of uncertainty about the future of the political development of Tibet and of the Dalai Lamas.

The old Indian Civil Service was not generally looked upon with favour as the members were alleged to keep themselves aloof from the Indian masses. Hilton Brown is an exception and his sympathies with India and her political evolution are well-known. His contributions appear in some of the daily newspapers of India. B. J. Gould, likwise, appears to have been supremely sympathetic to aspirations of India and Tibet.

The volume is a striking illustration of the fact that official routine is transformed into thrilling experiences by non-official cultural ties and interests. Students of Indian history and politics would readily welcome this volume of absorbing personal and anecdotal interest.

5. HEAD FIRST FOR HEALTH—By Calvin Cottam—(House Warven, Hollywood-27, California. Pp. 122. Price 3 Dollars).

Described as based on 30 years of discoveries and developments by Dr. Nephi Cottam, the present volume contains an exposition of a new technique of cure of many strange and mysterious maladies which would not

yield to ordinary medical treatment as given by physicians.

The new cure technique is known as Craniopathy. These mysterious diseases or maladies are due to high and abnormal pressure exercised on the brain which then becomes too tight. There are sutures like seams where the bones join together to form the head. If the cells are made to expand and have more ease, the pressure on the brain would be reduced. Tightness will disappear, and with tightness, the mysterious maladies likewise will disappear.

By means of executing the necessary movements, in the shape of massage, etc., at back and front of head, the tightness can be removed. Several important cases which have been cured by the new technique have been listed in the volume. The book has been fashioned in the form of a dialogue or discussion between two persons. One is ZUM, who sticks to old and conservative methods in life. The other is ZY, who delights in new and has an exploratory bent of mind.

The volume contains a number of illustrations of the brain and the skull and the important centres. Patients suffering from strange and mysterious maladies just want cure. They do not mind if the cure is effected or brought about by means of an old method or by means of a new technique. The title of the volume is highly significant. For perfect health, it is the head that requires attention first. The Hindu mind will find a ready and sympathetic response to the new technique of cure.

The head is described as *Uttamanga*, i.e., the most important part of the body or nervous system. The Ayurvedic systems has in use many oils, application of which to the head is believed to cure many troubles. The yoga system has rightly emphasized the posture (*Aasana*) known as the *Sirsha-Aasana* practising of which is sure to cure many physical and mental abnormalies and ailments.

The volume contains an account of many cures effected by the application of the new technique. Such discoveries are beyond controversies. If the new technique is practically used and success obtained, it stands universally justified and vindicated. But, here, as everywhere else, all that glitters is not gold. Genuine experts should be carefully discriminated from quacks.

6. YOGA FOR PERFECT HEALTH—By Alain—(Thorsons Publishers Ltd., 91, St. Martin's Lane, London. Pp. 156. Price 12 sh. 6d. net).

It is a truism that perfect health is wanted by everybody. Health is wealth. There must be a sound mind in a sound body. *Mens sana in corpore sano.* It is, however, very difficult, if not altogether impossible to prescribe a medical or psychological, or any other recipie that would guarantee perfect health throughout life. From time immemorial elixirs have been promised and distributed, but, to no purpose. Voronoff's monkey-glad-grafting and other operations have been of no avail.

In India, the system of psychophysical discipline, known as *yoga*, has been in existence for thousands of years together, and it is hopeful and encouraging to note that foreigners are taking in the yogic exercises. The author, during convalescence was annoyed to note the slow progress. So, he took to the practising of yoga, and his convalescence was accelerated.

The author's practical knowledge of postures and breathing exercises is embodied in the volume. On the title page is printed a dictum of Swami Sivananda to the effect that "Hatha yoga insures beauty, health, strength, and long life".

There are 16 photographic representations of the well-known postures advocated by yogic methodology. The author is to be gratefully complimented for his courage and conviction in the efficacy of yoga system, and in having given expression to these. Still, even the most sympathetic foreigner has some difficulties in correctly understanding the significance of Sanskrit terms.

Thus, in the classification of yoga, there has occurred a confusion between two fundamentals. The division of yoga should be into Hatha yoga, Laya yoga, Mantra yoga and Raja-yoga. Or, the division should be into Jnyana yoga, Bhakti yoga and Karma yoga. Confusion between the two is unwarranted.

Rama is not the incarnation of Siva. The view of Valmiki as embodied in the text is that He is incarnation of Vishnu. *Kumbhaka* is translated into inhalation. (Pp. 155). This is incorrect. It is suspension of breathing. *Pooraka* is inhalation. There are some other minor inaccuracies which, I trust, will be eliminated from a subsequent edition.

The author has very rightly pointed out prolongation of life cannot be had for mere asking. Important and highly taxing conditions have to be fulfilled. Whether death is or is not conquered by yoga, there is no doubt that good health can be maintained. That has been his personal experience. A valuable service has been rendered by the author in vindication of yoga methodology.

7. THE FLUTE OF KRISHNA—By P. A. Krishnaswamy, M.A.—(S. P. League Ltd., Calcutta. Pp. 103. Price Rs. 3.)

Lord Sri Krishna who, while in incarnation on earth, in flesh and blood, hypnotized and enchanted the girls and damsels of Vrindavan, through the instrumentality of divine musical notes flowing from His Flute, has for his inseparable companions the musical instrument and a Divine rod by means of which He kept the cattle tended by Him under control.

What is the origin of the Flute? What is the origin of the Rod? Mr. P. A. Krishnaswamy describes the origin of both. His description has been fashioned or patterned as a Drama. Here is the argument. A young man of a lower class leaves home and gets the highest wisdom and education from certain sages. This young man is named Vidyaratna. He attracts the notice of the father of Murali, a lovely girl. They are married. Differences in social status are ignored.

The marriage is not a mere physical union. They develop to be mystic personalities. They are both God-intoxicated, in a sense. They strive for God-realization. God can be realized only through service to His Creatures, and accordingly, Vidyaratna and Murali dedicate themselves to service of the poor and the depressed, the dejected and downtrodden. Murali contracts a fever and dies. Vidyaratna too dies of the same malady. Over the grave of Murali, hollow bamboo grows. Over that of Vidyaratna, hard bamboo stands.

Out of one of the hollow bamboos growing over Murali's grave, Krishna made His Flute. Out of a hard bamboo towering over Vidyaratna's grave, the Lord made a rod, or stick which is His *vade mecum*.

The above plot has been expanded and developed by Mr. Krishnaswamy into a fascinating Drama of Five Acts. Dialogues, characterization, development, denouement, blend of social, religious moral and didactic sentiments, stand superbly harmonized by the author into a play.

Swami Sivananda, Dr. Pattabhisitaramayya, and Dewan Bahadur K. S. Ramaswamy Sastry have written appreciative Forewords. Valuable notes have been added. The great doctrine of the Gita is that the Lord uses men and women as His chosen instruments for the onward march and

progress of cosmic scheme. So, have Murali and Vidyaratna been chosen as His instruments. This is typical Divine Grace without which salvation cannot be obtained. I hope Mr. Krishnaswamy's dramatic genius will find expression in many more such interesting plays as the *Flute of* Krishna, which is perfectly stage-worthy instructive and appealing to intellect and imagination.

8. SRI KALIDASA KERALI—English Translation by Pandit Viswanadham—(Kasimkote-Visakha Dt., Andhra Pradesh. Pp. 12. Price Re. 1.)

The author of the translation into English of the original text in Sanskrit which is attributed to the authorship of Kalidasa, points out, in his "Preface" that the Sanskrit text is being published for the first time. It would seem that Kalidasa in his verses has first addressed a lady describing her charms in glowing terms, and then, described the effects of the different bhavas. The author has omitted the portion re'ating to glorification of the attractions of the lady. So, out of the 65 stanzas, computed as the maximum, only 45 are given. The text is printed in Telugu characters and each stanza has been rendered into English.

The title of the work suggests that the Kerala country must have been familiar with it, and, this is understandable, as Sankara was born in Kerala and visited the land of his birth after he had become world-famous, and some have attributed, the work to Sankara himself.

But, I do not see the exact relation between Kalidasa and Kerala. Whoever composed the work, be it Kalidasa or Sankara, it is a small and handy publication that would be useful to astrologers—students and practitioners. There are several typographical errors, which must be removed in the next edition. Pandit Viswanadham has brought out a new and useful work on predictive astrology.

9. BHASA—By A. S. P. Ayyar, M.A., I.C.S.—(V. Ramaswamy Sastrulu and Sons, 292, Netaji Subhas Chandra Bose Road, Madras-1. Pp. 592. Price Rs. 5 or 7 sh. 6d.)

The present volume appearing in the series known as "Indian Men of Letters", deals with Bhasa, a pre-Kalidasa dramatist of great distinction and literary output. It is a revised and enlarged edition.

Rediscovery of Bhasa is the subject-matter of Part I. Part II contains an account of the 13 plays of Bhasa. The greatness of the dramatist is brought out in Part III. Part IV stands devoted to an exposition of the characteristic features of the personality of Bhasa, and of his ideas and ideals.

Readers will remember the amusing discussion pursued in Britain regarding the authorship of the plays attributed to Shakespeare, and the belief is not yet completely dead that Shakespeare did not write the plays, but, somebody else did. In Indian literary criticism, the issue is not as bad as that. It is not sought to be denied that even the great Kalidasa himself has made reference to his predecessor Bhasa. But, there is no doubt that Kalidasa merely damned Bhasa with faint praise. In a single act of sweeping condemnation, Kalidasa easily dismissed all the old dramatists and their plays. Kalidasa has sarcastically commented that old things are not always the best, just because, they are old.

Kalidasa's reference to Bhasa contains the subtle and subterranean insinuation against old Bhasa, and an invitation to the public to patronise his own plays categorized as new. The characteristics of Bhasa's dramatic art, conditions of stage and acting in those days, contemporary social, literary, and political factors, and connected issues are all fairly elaborately treated by Mr. Ayyar, so that readers may form in their minds, a correct picture of the world of Bhasa.

Mr. Ayyar has doubtless drawn certain lines of comparison and contrast, between Bhasa and Kalidasa, but, the comparative study, is as such inadequate, as it is confined just to theology and concept of kingship. The contrast and comparison should have been worked out and developed on the lines of canons relating to dramaturgy.

It is unfortunate that errors have crept in, in the "contents", and in main body of the work. Thus, in "contents", Pratima-nataka is numbered as X, but, in the main body of the book its number is IX. Pagination alse is erroneous.

It is permissible to hope that Free Bharat's Playwrights may be able to produce works like those of Bhasa and Kalidasa.

10. ASTROLOGY AND YOU—By Carroll Righter—(W. H. Allen, London. Pp. 173. Price 12 sh. 6 d.)

The author is described on the title page as "The World's greatest Astrologician". After detailing the historical background of astrology, in Part I, the author has explained the significance of the twelve signs in Part II. Part III stands devoted to an account of planets. The importance of 12 houses is emphasized in the fourth. The fifth deals with vocations. The sixth refers to the Aquarian age.

The stars are said to impel, but, not compel. The dictionary meaning of the term impel is to move forward. Compel means to drive, to force. If the stars are admitted to impel just, that must be as good or as bad as compelling.

The features associated with signs and planets do not seem to be universal. For instance, it is observed that many Geminis are actors and actresses. There are, on the other hand, several Geminis who have nothing to do with acting.

So, neither in Oriental, nor even in Occidental astrology has it been possible to arrive at Universally Valid Laws. The existing laws are highly probable empirical generalizations. The chapter on vocations tells the same tale. One simply cannot have a general law that all Geminis are actors, but, we have a Universal Law that all material bodies gravitate. That is the difference between astrology and other sciences.

After two thousand years of Piscean age, the Aquarian age commenced in 1904. This is an age of tremendous scientific advancement (Sputniks, etc.) The world will be watching with keen interest and expectancy what the age has in store for mankind..... Never mind whether it is impelled or compelled. I feel impelled to admit that the author has written quite an attractive volume on Astrology and You.

MENTOR AND SIGNET BOOKS

11. THE CREATION OF THE UNIVERSE—By George Gamow—(Mentor).—Pp. 144. Price 50c.

12. MODERN MUSIC—By J. T. Howard and James Lyons—(Mentor).—Pp. 160. Price 50c.

13. THE FBI IN ACTION—By Ken Jones—(Signet).—Pp. 161. Price 35c.

14. THE HUMAN BODY—By Elbert Tokay—(Signet).—Pp. 248. Price 50c.

15. NEW WORLD WRITING—No.12—(Mentor).—Pp. 288. Price 50c.

16. ROGET'S COLLEGE THESAURUS—Ed.-National Lexicographic Board—(Signet).—Pp. 416. Price 50c.

17. EIGHT GREAT COMEDIES—Ed.-S. Barnet, M. Berman and W. Burto—(Mentor).—Pp. 472. Price 50c.

(All published by the New American Library, New York-22, N.Y.)

Whether one takes the theistic, Biblical view of the Creation of the Uni-

verse, or the strictly scientific one (methodologically atheistic—like the Cartesian Doubt) there is no doubt humble students will feel a sense of deep mystery when they contemplate the Creation of the Universe with galaxies,stars, planets, oceans, mountains, and so on, and in this volume, the author gives an arresting and thrilling account of Creation of the Universe in the light of facts revealed and verified by sciences and scientific observation. Whosoever made the atoms, the time taken was less than a hour. To make the stars and planets, it took a few hundred million years, but, to make mankind, it has been a duration of 3-billion years. (Pp. 136). Such a time-interval must seem absolutely staggering to those who are contemplating a trip to Moon and Mars.

Modern Music is described as a popular guide to greater musical enjoyment. The authors have explained the differences between *polytonality* and *atonality*, and explained also easy and simple ways of enjoying modern music. If music of any given age is to be enjoyed, one must know the differences in style adopted from one age in another, and also differences in technique employed. This perception of differences in style and the technique will apply to Oriental Music as well. In Indian Music, one would see that from the pure classical music to the present music democratized by the Radio, there is indeed a far, far cry. It is most likely that such a state of affairs prevails in Occidental Music as well.

With advancement in civilization crime also advances. If new laws are passed to prevent or punish crime, the professional criminal exercises his creative imagination and endeavours to circumvent the law. The Federal Bureau of Investigation of America has successfully hunted down notorious public enemies, and in *FBI in Action* the author has narrated 22 thrilling crime stories constructed on the basis of data found in the actual files of the FBI. Justice must overtake the criminal through the due process of the Laws, and when the law has been violated, or broken, the malefactors, should be brought to justice. If not, the Majesty of Law will never be vindicated. These principles will be universally welcomed. I would like to draw particular attention to the case "My Wife is Missing", in which one kills his wife and reports to the Police she is missing. Eventually, the FBI brings the criminal to book. I hope the volume will be read by the Police staff of every modern civilized country. The stories appear remarkably similar to the adventures of Sherlock Holmes. On page 68, one would find a high compliment and sincere tribute paid to the FBI.

In this revised and expanded edition of *The Hindu Body*, Dr. Tokay describes in detail the structure and functioning of the Human Body. Even amongst the educated, many do not know the anatomical and physiological facts concerning their own nervous systems, and this volume which contains 44 illustrations and 24 pages of Anatomical Atlas, will enable laymen and even experts to understand something about the nature of the Human Body. What are hormones and how do they act? How is food digested? How do exercises affect body? These and connected questions are answered by the author in a fairly simple and easily understandable manner. It is hoped that knowledge of the different functions of the body will enable people to lead happy and healthy lives.

Vol. No. 12 of the *New World Writing* contains something of the best of what is to be found in the different literatures of the world, in reference to fiction, literary criticism, drama and poetry from the works of authors well-known and recognised as such. "Homecoming" by Balachandra Rajan will be of interest to Indians. It constitutes the first chapter of the author's first novel which is to be published by Simon and Schuster. W. Brockway's comments and reflections on the nobel literary prize are cruelly candid and devastatingly straightforward. It seems that someone jokingly remarked that Alfred Nobel "was the richest vagabond of Europe". (Pp. 274). How Tagore was chosen for the award is related on page 287.

This college *Thesaurus* in Dictionary Form is described as "newly written, newly edited, and newly published", and it is intended for use in home, in school, in college, and in office. Synonyms and antonyms are given arranged in alphabetical order and new words and phrases, and certain new synonyms have also been added, it is observed. Some important foreign pharses are given together with renderings into English. The volume includes colloquial and even slang terms. Of course, English is scheduled to disappear from the shores of India, by a specified period, but, so long as it lasts and continues in the hospitable land of Bharat, the great and universal language should be correctly understood and properly used, and that end is served by the present volume.

Eight Great Comedies of the world staged from the earliest times down to the present day have been assembled in this volume. Part I contains the texts of these comedies and Part II contains critical essays which are descriptive and evaluative. The comedies are—Clouds (Aristophanes), Mandragola (Niccolo Machievalli), Twelfth Night (Shakespeare). The Miser (Moliere), The Beggar's Opera (John Gay), The Importance of being Earnest (Oscar Wilde), Uncle Vanya (Anton Chekhov), Arms and the Man (Shaw). Laughter is indispensable for happy and healthy life. I am sure study of these world's great comedies would enable persons to indulge in innocent laughter for some time and get the best out of life. Both in respect of quality and quantity, the output of the New American Library is remarkable and highly commendable.

SANSKRIT

18. SRIMAN NARAYANEEYAM OF NARAYANA BHATTA—with commentary in Sanskrit by K. Krishna Wariyar, copies from K. V. Achyuta Wariyar—(M. R. Vaidyasala, Cranganore, Kerala State. Pp. 790. Price Rs. 10-8.)

Just as the Ramayana and Mahabharata have kindled the creative inspiration of many a poetic artist or genius into production of new literary works, Bhagavatha also has been responsible for emergizing of creative imagination. The Narayaneeyam of Narayana Bhattapada is too well-known to need any special introduction. It is universally admired and read with religious zeal and devotion, particularly in Malabar, or, the modern Kerala State.

There is an illuminating "Introduction" (Avatarika) in Sanskrit written by Pandita Raja K. Achyutappoduval, in the course of which, details are mentioned about the author and the circumstances that led to the composition of this great and celebrated work. Darsanakalanidhi Ramavarma Pareekshit, ruler of Cochin, has recorded a commendatory testimonial in favour of the work and the commentary.

The entire work has been counted to run to 1036 stanzas. The stanzas stand arranged into decades or decalogues, each containing ten. There is a century of such decade-units. The whole of the Bhagavatha has been retold in the form of verses by the talented author. Tradition has it that the Guru of the author was suffering from a severe malady. As prescribed in ancient texts, this malady was given or transferred to the devoted disciple. The disciple, then, prayed to the Lord at Guruvayoor and freed himself from the said malady. His penance consisted in composing daily

ten stanzas and offering them as prayer to the Lord.

It is noteworthy that the commentary follows the orthodox traditional lines and throws a flood of illumination on the hidden and obscure meanings, implications and veiled suggestions contained in the original text. Quoting the authority of the great Adi-Sankara himself, the author expounds the theological doctrine of the absolute supremacy of Lord Vishnu, who is identified with Brahman of the Vedanta-sutras.

The present publication is bound to enrich the contemporary stock of devotional literature in Sanskrit, and it will be particularly welcomed in Kerala associated with the author and the Deity glorified.

19. SRIMAD VALMIKI RAMAYANA—(Text only Devanagari)—Published by Mr. Ramaratnam—(The Madras Law Journal Press, Mylapore, Madras-4. Pp. 1096. Price Rs. 12.)

In the course of a Note by the publisher, Mr. Ramaratnam, M.A., B.L., it is explained that after a lapse of about 25 years, this second edition of the text of the Valmiki Ramayana has now been printed, the first edition having gone out of print, roundabout five years ago. Mahamahopadhyaya Pandit Chinnaswamy Sastry and Pandit Subrahmanya Sastry (Vedanta-visarada, etc.) have carefully prepared the edition for print.

The volume contains the orthodox account of commencing and completing the devotional reading of the Epic (Parayana) as practised by followers of Sankara, Ramanuja and Madhva. The contents of each chapter (Sarga) have been indicated for all the chapters of all the Kandas. Then, the text of the work is given in attractive Devanagari types, and *variae lectionae* have been given in footnotes on each page.

The "Foreword" to the first edition contributed by Prof. S. Kuppuswamy Sastry has been reproduced, and it has a permanent interest, as having proceeded from a first-rate veteran savant in whom the best elements of Oriental and Occidental culture had harmoniously existed in striking personality blend.

It should not be out of place to mention that perhaps, the best South Indian editions of Ramayana one in Text only and the other with the commentary of Govindaraja and extracts from several other commentaries, were given to the public by Pandit T. R. Krishnacharya, proprietor, of the Madhva Vilasa Book Depot, in Kumbakonam decades ago. Since then, several editions, have appeared, of which the M.L.J. Press edition is easily the best.

The assessment of the spiritual and philosophical significance of the personality of Sri Rama, arrived at by Prof. Kuppuswamy Sastry, is highly scholarly illuminating and unexceptionable. In certain compelling and pressing emergencies, the Almighty Lord has to take incarnation on Earth as Man, and restore equilibrium or balance between virtue and vice. While moving and behaving as Man, such an incarnation reveals glimpses of Divine as well.

Prof. Kuppuswamy Sastry has rightly emphasized the fact that the great Epic of Ramayana would last as long as mountains and rivers last on this planet. Critics may come and critics may go like the German detractor, but, Ramayana goes on for ever as the world's most fascinating and greatest epic.

I have great pleasure in commending the M.L.J. Press edition of Ramayana to the attention and patronage of the public.

20. SRIMAN NARAYANA VYASA CHARITAM—By Pandit Gopikrishna Sastry, Professor of Sanskrit, Madhav College, Ujjain.—(Pp. 23. Price not marked).

Pandit Narayana Vyasa was a distinguished and illustrious personality of Ujjain well-known for his wide and deep scholarship in Indian astronomy, astrology, and other branches of Sanskrit learning. He was born in Vikrama Samvat 1917 and passed away in 1992. His horoscope is given in the booklet under notice.

Pandit Gopikrishna Sastry, Vyakaranacharya, Kavyatirtha, etc., has written a brief biographical account of the late Pandit Vyasa, in Sanskrit verse and prose. A work written in a mixture of prose and verse is technically classified as a *Champu*. (Gadya-padyatmaka).

Pandit Gopinath has composed a miniature Champu, and he has easy and efficient control over the mechanism of Sanskrit composition. Mars in the 10th and assemblage of planets in the 4th, readily lend support to the subject-matter of the biography having been a powerful controversialist and a scholar of substantial equipments and achievements.

It is noted that Pandit Vyasa had been held in great esteem by late Lokamanya Tilak and others who had taken active part in the movement for reformation of Panchang. Sanskrit works are becoming rarer in these days, and the author has to be complimented on production of an interesting biography in a classical language.

TAMIL

21. SOUTH INDIAN TEMPLE INSCRIPTIONS,—(Tennindiya Koyil Sasamangal—Vol. III, Part II, Government Oriental Manuscript Library, Madras-5. Pp. xxviii+ 251 + 386 + 1295 + 1610 + cxii. Price Rs. 5.)

The Second Part of the Third Vol. of Temple Inscriptions found in South Indian Temple edited by Mr. T. N. Subrahmanyam with critical introduction and notes is a scholarly and authoritative research work thoroughly documented, and produced with great care and critical judgment.

In the course of the "Preface", it is pointed out that the present volume contains 35 inscriptions traced anew, and the entire collection totals to 1299–which constitutes a fairly formidable number. There is a historical survey which covers the period commencing from that of Rajaraja–I, and ending with that of Kulottunga–III, and Ballala–II.

Then, appears historical survey in Tamil, after which, are given Texts of the inscriptions. There are four Appendices. Then occurs an exhaustive study of Tamil Palaeography. Epigraphical glossary, an Index in English and another is Tamil, make the publication fall in line with modern research publications.

The volume throws considerable light on the Saiva-Vaishnava controversies then prevailing, and in those days such debates, disputes, and differences were not in any manner sought to be solved by advocating a simple religio-theological equation between Siva and Vishnu as if these were mathematical entities. It is necessary to draw the attention of your readers to the scholarly note on the date of Ramanuja. (Pp. 147—160).

The king who persecuted Ramanuja has been identified to have been Kulottunga–III, though there are still some lingering doubts, as ancient Indian History and Archaeology have for their subject-matter only doubts, conjectures, and surmises, soap-bubbles and speculations. It is the Chola period, an image of Lord Govindaraja can be so unceremoniously thrown into the sea, in modern times, one may seek to find some justification or extenuation of the acts of some modern iconoclasts who go about advocating the breaking of the images of gods like Lord Vinayaka.

The inscriptions, here studied, suggest a striking contrast between the way in which ancient rulers were

administering temples and temple funds, and the way in which modern congress government is dealing with them. It remains to be seen to what extent, and in what respects, publication of these inscriptions will throw new light on South Indian history or lead to reconstruction of it.

Meanwhile, Curator Mr. T. Chandrasekharan and Mr. T. N. Subrahmanyam should be regarded to have done valuable service is the cause of ancient Indian history and chronology.

FRENCH

22. BALANCE—By Andre Barbault—("Le Zodiaque" aux Editions du Seuil, Imprimarie, Georges Lang, Paris. Pp. 128. Price Fr. 250).

The present work on *Balance* or *Libra,* maintains the usual level of excellence as revealed by other volumes in the series previously noticed in these columns, relating to the other zodiacal signs. The period concerned lies between 23rd September and 22nd October. The astrological preliminaries associated with the signs and planets found in the predecessor volumes are also reproduced in this, which greatly facilitates ready reference. The nature and symbolism connected with Balance, the personality types and characteristics, the peculiarities and idiosyncracies of persons born under this zodiacal sign are described in an attractive manner with iliuminating details and striking illustrations.

The significance of the relation between the other signs and Balance are described, and the main characteristics of the sign are sociability, harmony, sexual contacts and alliances. The most important section of the volume is the third, in which an account is given of different personalities born under this sign.

It may be assumed as a fairly general proposition that if Venus, the lord of Balance is favourably situated and aspected, it may be taken for granted that the persons considered will be lucky in life, with plenty of world's goods surrounding them throughout life. If, on the contrary, Venus be unfavourably situated, or aspected, or otherwise unfavourably disposed, the subject is sure to be confronted by ill-luck, frustration, particularly in matters of sex-relationship, lack of financial resources, and comforts of life.

The influences of Balance on men and women would seem to be different, and these are described on Pp. 60–63. Amongst the personalities mentioned dominated by Balance, are Henri IV, Louis XIII, Katherine Mansfield, Nietzsche, Virgile and others.

But, your readers will be particularly interested in the account of Gandhi found on Pp. 87. Gandhi has been a world-renowned and universally respected personality, and all his successes and failures (there were some few in his life) may be traced to the indications conveyed by Balance. I refer readers to Prof. B. V. Raman's study of the chart of Gandhi in *Notable Horoscopes.*

It is to be carefully noted that an unfavourable lord of Balance will indicate colossal moral depravity from which even some of the world's greatest are not exempt. The author has written an attractive and authoritative work for which the astrological world should feel deeply grateful.

PERIODICALS

23. DIVYA JYOTHI—Sanskrit Monthly—Vól. 2, No. 12, Sept. 1958—(Ananda Lodge, Jakhoo, Simla. Annual subscription (Inland) Price Rs. 6. Single copy 62 nP. (Foreign) Sh. 15.)

Journals and periodicals are very rare in Sanskrit, and it should be a great pleasure to record that the Sanskrit Monthly journal edited by and founded by Acharya Divakara Datta Sarma entitled *Divya Jyothi,* has completed two years of existence, and will be entering on the third year with the next number.

In the course of a well-thought-out and closely-reasoned, and finely-worded article, the learned and talented Editor, while, surveying retrospectively the work accomplished in two previous years, has pointed out in what lines, future programs should be planned, projected and executed.

The Editor, rightly, regrets, the number of journals can be counted on one's fingers, and absence of encouragement, absence of or lack of contributors, and inability of existing journals in Sanskrit to pay their correspondents and contributors are responsible for the present unhappy and unpromising condition of journalism in Sanskrit. If schools, colleges, Universities and other learned bodies, would make it compulsory to subscribe for copies and encourage existing journals, in Sanskrit language (divine and living, dynamic and delightful—*not dead* as some say) conditions may improve, is the hope expressed by the Editor, which, I daresay will find a sympathetic echo in the heart of every lover of Sanskrit.

The volume opens with some verses on the illusoriness of the Universe, (*jagatah mithyattvam*) by Pandit Radhakrishna Tiwary. Acharya Gajanana has contributed an interesting biographical study of the well-known scholar late Mahamahopadhyaya Raghupati Sastry. The prayer to the Almighty Lord composed by M. Pandeya Sastry, and the striking description of the rainy season by Somanath Sarma reveal poetry of

birth. The relevant *Tamil verse is also given.

I request your earnest readers if they have come across this yoga in their pursuit of the study of astrological books, to give more details of the yoga through the pages of your esteemed magazine.

Madras. V. VENKATARAMANA RAO, B.A., B.L.

ASTROLOGY AND THEOLOGY

(Continued from page 70)

Science, there are various other possibilities. I have already said that an object can be split up only with a thinner object. An axe can cut a wood, but for cutting a diamond we must have thinner, finer instruments. Material objects can be split up in various ways; but an atom can be split up only through a "cutter" that can penetrate through the parts of an atom. If the parts of an atom, like electrons, are material particles with spacial extension, then they by their very nature, must be capable of being cut into parts.

What is it that is finer than the parts of an electron which can penetrate through such parts and split up the electrons? Scientists say that there is no such cutter that they are able to think of. Can ancient Indian thought reveal such a "cutter"?

One may ask what purpose will be served by attempting an answer to such idle questions, since science is able to get on without the aid of a universal agent or of a universal law worked out by an infinite number of intelligences. Science deals with the material world, and such questions have no place in science. I have no difficulty about a suitable reply to such an objection ready at hand. Suppose Einstein could project his thoughts backwards through time and contact Newton and had suggested to the latter certain new methods of approach regarding the nature of time, space and matter; perhaps Newton would have advised Einstein to proceed along his own line of approach with a three dimensional space extending in straight lines, and make further progression in science instead of wasting his intellectual powers and his time over such idle positions. And if Einstein had surrendered, what would have been the position of scienee today? Similarly, if Democritus could have reappeared in the world and asked Rutherford not to think of splitting up the atom, but to work out scientific problems within the range of his own theories about atoms, and if Rutherford had accepted the advise of the Greek philosopher, what would have been the position of science today? **Life and intelligence and certain hidden powers in man are not to be ignored as unworthy of being introduced into the realm of science.**

What is experienced as "sound" is, according to ancient Indian thought, a certain manifestation of a phenomenon in a finer medium that is subtler than anything thought of in the material world. Those waves are finer than the *gama* rays and may penetrate through forms of matter finer than the electrons of which electrons are the composits. Then there are gradations in this system of waves also, as there are gradations in the known waves of radiations. If scientists are hoping to get together the electrons and construct an atom, there are the further possibilities of man being able to collect together the finer parts of such electrons and construct electrons. An investigation into what is manifested as the phenomenon of sound may have very valuable consequences in science.

Scientists have accepted certain mysteries about the sound-waves and their relation to biology. Then there is the phenomenon known as the mind. Scientists are completely ignoring this very important subject-matter. Mind has lost its reality at present in the eyes of the scientists and has been reduced to a "behaviour". Let it be only a behaviour and let there be no substance called the mind. But the question stares us in the face what this "behaviour" is. Is it anything different from what behaves or is it that itself? A behaviour is the thing that behaves in a particular state or it is the effect of something outside on the thing which behaves in such a way. Either there is the personality in a particular state or a behaviour which is called the mind, or there is a thing called the mind which produces a particular behaviour in the personality. Scientists must investigate into the nature of this "mind", and in this investigation, the background of ancient Indian thought will be of great help.

Mind may be taken as a sort of wave, which wave is much finer than the sound-wave, and as such it is capable of splitting up the atom or electron or even the parts of electron much more easily than the latter. Mind, being an aspect of the intellect itself, is capable of functioning by itself, whereas the sound-wave can function only through the agency of the intellect. Mind by itself, or through the instrumentality of the sound-waves, can not only split up the smallest particle of matter known in science, it can also collect such finer parts and compose an electron and such small particles of matter. It can also infuse life into matter and convert matter into living or organic matter. Mind has this capacity; but the capacity has to be developed and made operative.

Intellect at this stage acquires certain new potentialities. Certain powers of combining parts of matter without a spacial extension into composite matter with spacial extension, or certain powers like infusing life into matter, were assigned to a super-intellect, according to some systems of thought in India; in other systems, such an intellect was not accepted, and they accepted only a universal law, of which only parts came within the sphere of the knowing process of the infinite intellects. When the individual and limited intellect develops certain powers through the operation of the sound-waves or through the operation of the mind itself, at that stage, the intellect acquires powers that were restricted to the super-intellect; in the view of there being no such super-intellect, the individual intellect widens its powers of understanding within the limits of the universal law, and sometimes can even expand the sphere to such an extent that for practical

purposes they may be accepted as omniscient. In the normal state, the individual intellects can grasp only the behaviour consequent on the operation of the law, and not the nature of the law itself; but at that trained stage, the individual intellects acquire the power of realising the true nature of the law itself, though limited in scope.

Whether such statements regarding these advanced intellects in ancient Indian literature relate only to the postulations of theoretical possibilities in science or were actual records of real achievements among humanity, does not make much of a difference to us in the present context; even such a postulation is worth acceptance for investigation. Have modern scientists even dreamt of such immense possibilities for man? Whence other than from ancient Indian thoughts can science receive an inspiration for making an open effort to lift the position of man to such heights of knowledge and power?

There are various other problems that rise up for consideration when the sphere of science is expanded to such extents. Is there a beginning for the world process? If so, what is it and how is that point to be determined? Can there be a point on a scale without a prior to it? Is there a goal and a termination for the world process? If there is a termination, there must certainly have been a beginning. If there is not such a terminus there is no goal, and without a goal there is no progression; progression is an orderly movement towards a fixed end along a pre-determined method. If there is a beginning what was there prior to it, and if there is an end what will there be after it? Is the movement from absolute uniformity to absolute differentiation, or is it the opposite way? Why should there be such a change and what is it that determined the preference for one over the other? If there is no such preference, why should there be such a migration? Again, is the change from a static state to a state of movement or is it a change from movement towards a static state? Is the universe by nature static or dynamic and is the change meant for attaining its real nature again? Why was the world upset from its real nature, simply to be restored to that real nature?

Ancient Indian thought is not silent over such facts nor are the thinkers indifferent such problems. They did not also consider such questions idle or impertinent. Literature bearing on the problems is full of suggestions regarding the solution for such questions, though we may not have any finished commodity with labels on the packets and directions for use. I cannot discuss any of such questions in this context. But I know the answer.

The first thing that scientists must do is to accept a science called astrology. They must have vision and courage in their procedure, and it is only then that science will be really scientific. **If the universe is accepted as an organism, then astrology cannot be denied its legitimate claim of being recognised as a science and as a very important science;** astrology deals with the relation of the parts of this organism to the other parts. **That there are astrologers who are quacks and who cannot be admitted into the fold of scientists, is no justification for condemning the science.** Are there not bad politicians and bad administrators, and yet do we denounce governments as such? Are there not bad lawyers, bad physicians, bad policemen and bad businessmen? And yet do we boycott law courts, do we keep away from hospitals, do we flaut law and order, and refuse to recognise business? Why should astrology be an exception to such a universally accepted policy?

I know that I cannot convince politicians who are dried up and hardened, who are incapable of emotional urges, who cannot entertain grand intellectual ideals; there may be scientists who are under the thumb of such politicians. But I am sure that there are broad-minded scientists with vision and courage who will look at things with a scientific balance, unmoved by prejudices and false notions of prestige. Man stands to gain through the recognition of science as a study and understanding of the world as an organism with life in preference to continuing to think of science as what relates only to the material world outside, ignoring man and life as an accident. If such a shift is effected astrology comes in as a great science and man's range and depth of understanding will be increased.

Nothing that I have suggested above comes into conflict with the fundamentals of a scientist's position. The change results only in an extension and an expansion of the field of science and does not compel a migration from science to another field. **When astrology steps in, science become truly scientific.**

BOOK REVIEWS

(Continued from page 149)

high order. Critical study of Ramayana by Sri Srinivasaraghavacharya contains an illuminating study of the character and personality of Sita. Harinanda Sastry has some stanzas on the functions and operation of *Fate* and *Karma*, but, it is unfortunate that in one or two places, the composition reveals a definite metrical breakdown. Mr. Srinivasaraghavacharya's humorous story, Acharya Mahesa Datta's article on "Education in Free Bharat", and the section containing contributions in Hindi, make the journal rich in literary fare.

It is announeed for the benefit of the public that the inaugural issue of the third year will be a special number. In earnestly commending this journal to the attention of the public, I urge that all lovers of Sanskrit will patronize it as best as they could.

24. WORLD STATE—Vol. 1—No. 1—(Editor S. Viswesvaraiah, "Savitri Nilaya", 55, Nehrunagar, Bangalore-3. Price Re. 1 per copy)

This monthly journal in English is described as "dedicated to world-peace and international co-operation" which certainly is an eminently desirable goal, ideal, or objective.

In the course of the editorial it is observed, "This tiny spark from Bangalore will become a mighty flame, and will blaze a new trail in human history". The world-state like Plato's Republic may be a consummation devoutly to be wished and particularly prayed for. In these days, no doubt, countries are exchanging countless goodwill and cultural missions, and some mediocres make merry staying in fashionable hotels in the capital cities of Europe and America, return to India with plenty of goodwill after having spent huge sums of the public tax-payers' money.

Many such delegations and deputations, missions, and missionaries have recently visited Europe, America and Russia, which country deserves special mention. And yet, an ordinary average, Indian finds it difficult to obtain boarding and lodging in the hotels of the West.

Under these undeniable conditions of existence, world-state, world-family, world-government, world-societies and world-ccmpanionship should all be regarded as music of the distant drum, if one is to adopt a realistic view of things.

Under the section, "Profile", there occurs fascinating account of the life works and achievements of Sir S. Viswesvaraiah, the grand-old-young-man and architect of modern industrial, Mysore. The section entitled "History" contains an interesting contribution. "In quest of Buddha" which is claimed to throw some new light on the visit to India of the famous Chinese pilgrim—Hiuen Tsiang. An account is given of "Industrial Development in Siberia", in the section entitled "The Neighbours". The contribution has been, it is said, supplied by the Soviet Embassy. The relation between Economic Progress and Individual Freedom is discussed and expounded in the section entitled "The Economy". The writer observes that the Nationalisation of Life Insurance has not brought good to the people at large.

"Literary Treasures", "The Ninth Dubrovnik Summer Festival", "Why Intellectuals go to the country-side", "Asian Philosophy", "Towards A New World", "Art is Life", are some of the contributions appearing in different sections.

In extending a hearty welcome and in wishing it a long life of useful service to the public, it should be observed that the world-state is bound to be just a dream, a vision of some few, seeing that today, there is not even a common currency system for the whole world.

ARYAN MYTHS, LEGENDS AND TRADITIONS IN THE BIBLE

(Continued from page 74)

of paternity, in contrast to say many of the remoter Negroids, who believed even in our own day that the male had a little or no part to play in reproduction. This suggests that all the cultures which came from the one primitive and early Caucasoid stock had acquired that knowledge before their dispersal. This is consistent with the story of Genesis.

That the climate was growing colder is made clear by the fact that while at first Adam and Eve took to some form of platted vegetation (that is some primitive forerunner of weaving), this was insufficient for we read that the Lord God made them coats of skins and clothed them.

Here then, in an account written down in Palestine in the 6th century B.C., by scribes who had no conception of ice conditions of Central Asia, there were recorded sufficient references to increasing cold for us to see, even in their account, the onset of the last maximum of the ice age. In the Vedas we have a much more detailed, and perfect account of these conditions, which even give us the number of months of darkness, the intensity of the cold, and the fact that the burial of the dead could not take place in the winter months because of the frozen ground, and much more besides. The Hindu Aryans, with their account already crystallised in its present form earlier than this Biblical aspect of the same event, and themselves nearer to the source of the original events, and with the Himalayas and the tablelands of inner Asia always at hand to remind them of what ice conditions are like, carry a more detailed account of the same onset of the cold.

Now it is not without interest to note that Cain (after killing Abel) when driven out of the presence of the Adamic peoples, was afraid to fall among other men, lest they would kill him; and later we get the story of the intermarriage of the Sons of God and the Daughters of Men. All this indicated, that so far as the narrators were concerned, that while they considered themselves the apex of creation, they recognised the fact that there were other, and lower, racial strains. This attitude is, incidentally, very typical of the Caucasoids, and finds its expression frequently among the Aryans.

Before the advancing cold there is no doubt that the Caucasoids had retreated south westwards, and of them, the Aryan branch was probably lying most close to the cold front, but, nevertheless, in a region where agriculture and pastoralism was possible.

When the maximum of the ice age collapsed, it seems to have done so suddenly, and it was accompanied by vast flooding. The Baltic flowed far into Eurasia, the Caspian was enlarged, so the Aral, and low-lying areas were flooded.

Similar floods would occur on other fronts of the ice sheet, in eastern Asia, and in America. Therefore, the tales of floods will be found among all the principal racial stocks of

(Continued on page 154)

ASTROLOGICAL APPRAISEMENT OF BEHAVIOUR-PATIERNS

(*Continued from page 78*)

about reconciliation.

That the four kendras are favourable is a general statement. Of these, the 7th is to be transferred to the category of inauspicious. In the light of the inclusion of the 7th in the list of evil houses, the general statement about the four quadrants should be correspondingly modified, and this would leave 5 houses as favourable and 7 as unfavourable.

The author, then, proceeds to make another striking statement. One may not be under the impression that all the kendras are equally important. It is said that the 4th and the 10th are vitally important. They are taken to be instrumental in bestowing benefits. (*Yogakaraka*). The other two, 1st and the 7th, are described to be comparatively passive recipients of the beneficent effects. (*Phala-bhaginau...*)

But then, the author is not quite consistent or uniform. While, he has subjected the kendras to comparative judgment, he has not done the same in regard to the konas. He has taken the two konas to be co-ordinate in importance.

It is not understandable why such a discriminatory procedure has been followed in regard to the konas. If the analogy be extended it may be permissible to assume that of the two konas, the 9th may be taken to be more powerful than the 5th.

In addition, the author has laid down that a kona should be considered to be ruled or dominated by *Lakshmi*, and the kendras are likewise, presided over by *Mahavishnu*. Combination between the rulers of the two is to be understood as a very powerful configuration which would elevate the subject far above the average and the ordinary in possession and enjoyment of all the good things of life such as wealth, prestige, official status, honour and so forth.

Another grouping or assemblage of planets is mentioned. Should there be, in a given chart, combination of rulers of the konas, and the kendras, it is judged to be a very exalted yoga. Some other planetary groupings are also mentioned, which, can be easily had from the text.

(6)

With the help of the conditions and considerations laid down, in the previous section, let me set forth the interpretations given by the author. The author seems to lay great emphasis on the negative, cancelling or destructive power or potency of the unfavourable houses indicated.

If one or more of the rulers of the inauspicious houses were to enter the assemblage or grouping of favourable planets, the good effects are considerably neutralized or cancelled.

Conjunction is considered to be more effective than aspecting or aspectarian. If the favourable combinations are aspected by the rulers of the unfavourable houses, the good effects stand neutralized or adulterated, or even negatived, in proportion to the strength of the planets. In the light of these general rules or laws of interpretation, the behaviour-patterns are to be judged and appraised.

For instance, let a beginning be made with the Lagna or the Ascendant. It signifies or stands for individual behaviour-pattern *par excellence*. If the ruler of the Lagna be actually stationed in one of the unfavourable houses listed, it is certain there would be something abnormal, or unpleasant about the behaviour of the subject. It is common knowledge that personal or individual behaviour can be very violent and aggressive, or it can be very mild and persuasive.

If the ruler of the ascendant be in the 8th, the behaviour-pattern will be aggressive, frustrational, cruel and dominated by a certain amount of callousness and doggedness.

In respect of all the approaches two leading or main ones would be more powerful than the others. In the present instance, the ruler of the ascendant may be in the 8th house. Or, the ruler of the 8th may be in the Lagna or the ascendant. Intensive study is yet to be pursued, and sufficiently convincing or compelling statistics are yet to be collected.

It seems to me that of the two, the ruler of the ascendant being in the 8th house may be milder in effect or consequences, than the ruler of the 8th, being stationed in the Lagna. Because, if the ruler of the 8th house were to take possession of the Lagna like some evil spirit, the behaviour of that individual is bound to be more difficult to manage than in the other case. This interpretation is to be attempted in regard to all the houses one by one. If the ruler be, on the ascendant, in the 2nd, 3rd, and so on, in the unfavourable houses, the consequences of behaviour-patterns will be unfavourable. If, on the other hand, the ruler of the ascendant is stationed in one of the favourable houses, the results or consequences will be beneficial and favourable.

I am not quite sure. But, something like a general law or principle seems to emerge from an observation of facts. If the ruler of the ascendant should be stationed in one of the houses with which some relation, or friend, or official, or some other person, has been correlated, the behaviour-pattern of the latter would be controlled by the for-

mer. If, however, the rulers of the different houses correlated with persons, be occupying the ascendant, then, the former would be controlling the latter.

I am stating this formulation only as a very tentative and provisional generalization, just a possible hypothesis, awaiting confirmation, or rejection, as the case may be, in accordance with positive or negative evidence that may be made available in the shape of facts collected by means of horoscopic studies.

Whether one dominates the family, or is dominated by the family, whether one victimizes brothers, sisters, and others, or is victimized by them, whether one is able to defeat the machinations of his enemies, or is himself defeated by them, whether one is able to control his wife and keep her behaviour decent and disciplined, or, he himself is compelled by circumstances to be henpecked and cuckold, whether the frustrational forces in the environment will get the upper hand, or, whether the subject would be able to control them and secure adjustment to the environment, in the shape of advantageous activity, whether, again, official life or behaviour would be smooth and harmonious, or rough and disturbed, whether one would be pulled up the official ladder, or pulled and dragged down, and finally, whether life behaviour is or is not a pleasant journey throughout, where one would have life and career ruined by secret enemies, or whether one would thwart and annihilate them, would depend on one's own *Karma*, as indicated by the ruling planets connected with typical behaviour-patterns, being in favourable or unfavourable houses listed as such.

(7)

While, in the case of Varahamihira, and some other distinguished classical writers, it is noticed that these writers, make reference to other schools, systems, and opinions and judgments of some predecessors and even foreigners, the author of

(Continued on page 160)

ARYAN MYTHS, LEGENDS AND TRADITIONS IN THE BIBLE

(Continued from page 152)

the northern hemisphere, but only those of the Caucasoids will carry the tale as it relates to the flooding from the Baltic, and the Black Sea and the Caspian Sea, into western inner Asia, except so far as these stories have spread culturally, at a later date, to other stocks.

Now in all the Aryan peoples, who were the furthest north of the Caucasoids, and most in the area of the floods arising from the rapidly melting ice, and the flooding from the seas of lands depressed still from the former weight of the ice which they carried, and which had not yet reached equilibrium, we get the story of this flood, and the escape by boat, except in the case of the Iranians, where the garden of Eden motif appears to have become confused with it, and retained in its stead, as the place of refuge.

In the Vedas, the Brahmanas, the Mahabharata and the Puranas, we get the story. King Satyavrata who had been installed as the seventh Manu, also named Vaivaswata, was warned by God of the coming of the flood, and he made an ark, into which he went with seven companions, taking seeds and pairs of animals, and after the flood the ark came to rest on a mountain, and the King came out and sacrificed.

The Genesis story is parallel. For with Noah, and his three sons and their wives and his own wife, went into the ark the animals. The recurrence of the same number of people involved will be noted. **If there is any doubt as to the Aryan nature of the Genesis account it is surely itself set at rest by the fact that Noah's name is basic Aryan, related to the Latin Navis, Sanskrit *Nau*, meaning ship.**

Space will not allow any further exposition of this subject. We hope however that we have established two facts—first, that coming down in the sacred books of the higher civilisations, especially those of the peoples whom we have discussed, there are evidences of the folk-memory of very real and great events, which witness to the essential verity of the accounts which are being conveyed, although their media being by way of folk-tale, otherwise the story could not have been transmitted at all over such great spaces of time, they have been subjected to the needs of moral and theological teachings, in past times, and so their plainer historical meanings have been lost sight of; secondly, that in and above this there are accounts, such as those with which we started, which cannot be explained as evidence of folk-memory, since they are of events before the memory of man could operate, and therefore of events which could only be learnt supernaturally or psychically. These last facts establish the essentially sacred and divine nature of the narratives, although we must interpret them in the light of both the historic facts which the folk-memory has sought to convey, and the moral and theological principles which later scribes have sought to weave into the accounts.

At a later period it might be possible to carry the account further and demonstrate the meaning of the Tower of Babel story, and show some very striking Aryan characters in the whole Abramic and Covenant story of this first book of the Bible.

Your SCIENTIFIC DIFFICULTIES Solved

BY MIHIRA

[In the letters THE ASTROLOGICAL MAGAZINE receives from the readers, many interesting questions are put pertaining to astrological and scientific problems. Here are a few recent queries together with answers. If some similar doubts are puzzling you, why not write us about them? *This service is free to all readers of* THE ASTROLOGICAL MAGAZINE. Address communications to—MIHIRA, c/o THE ASTROLOGICAL MAGAZINE].

Q. 1. *(a)* What is the effect of Mars and Kethu in Leo in the asterism of Venus, Lagna being Cancer? *(b)* What are the effects of chain formation for Cancer Ascendant,—1st lord in 10th; 10th lord in 8th; 8th lord in 2nd; 2nd lord in 6th; and 6th lord in 2nd.

J.P.A., Chandusi.

Ans. *(a)* Both Mars and Kethu are malefics occupying 2nd house in a friendly sign for Mars but not for Kethu. They are however in the asterism of a benefic. For Mars and Kethu in Sukra's asterism the effects are given as follows:—"A sort of vain glory which is unreal, is exhibited. The native further sustains losses through women and ill-health and enmity are also caused; but if they are favourable to the native, the results will not be very harmful." In this case, Mars is yogakaraka. Hence the effects will not be very harmful. *(b)* Of the above so-called chain formation, only the last which goes by the name exchange is recognised in the texts, namely exchange between 2nd and 6th lords. This is a Dainya yoga for which the results will be ups and downs in the life.

Q. 2. What is Kalasarpa yoga and what are its effects?

N.K.B., Navrangapur.

Ans. This is formed when all the seven planets are so distibuted as to be within the 180° between Rahu and Kethu. The planets are thereby considered to be rendered powerless. This is not generally taken into consideration in natal astrology but only in Mundane Astrology.

Q. 3. What combinations cause thread worms and how can it be remedied astrologically?

R.M.M., Bellary.

Ans. When waning Moon is aspected by Mars in strength and Saturn is in 8th, trouble due to worms may be present. No authority deals with thread worms as such. Kethu figuring in connection with illness, is also liable to cause worms.

Q. 4. *(a)* For Taurus Lagna, cusp of 4th house falls in Cancer and that of 5th in Leo. 4th house is occupied by Moon and 10th by Sun and Mercury who is retrograde. Is there any Rajayoga? *(b)* What are the effects if Gemini and Sagittarius are occupied respectively by Kethu and Rahu identical with 3rd and 9th bhava? *(c)* In a Taurus Lagna horoscope, Mars is ruler of 7th. If Saturn is ruler of 10th and 11th, what are the effects if they combine in 11th? *(d)* Lagna Aries, Mars in Cancer has attained seven benefic vargas and has 88% residential strength. What results to expect in Mars Dasa? *(e)* Jupiter in Scorpio aspects full Moon in Cancer in kendra. Is it Rajayoga?

H.C.P., Balrampur.

Ans. *(a)* There is Rajayoga as lord of 4th and 5th aspect each other. *(b)* Kethu in 3rd house makes the native adventurous, strong, artistic, wealthy and popular, but Rahu in 9th is not considered favourable. The effects of both will be coloured by the planets which rule their signs and the planets that aspect them. *(c)* As even malefics in eleventh produce only good effects, this combination is beneficial though full effects cannot be realised because after all it is a combination as between malefics. *(d)* Though some disability attaches because of debilitation of Mars, the dasa will prove prosperous and beneficial in many ways especially in respect of 1st and 8th house matters, being the houses ruled by Mars. *(e)* For Rajayoga in addition to rulership of kendra and kona, there should be mutual aspect which is not present in this case.

Q. 5. Can a yogakaraka planet exercise maraka powers because of his association with a maraka planet, *e.g.*, Saturn for Libra and Taurus Lagnas by association with Mars?

Sub. No. 6956.

Ans. Yes. But this in itself cannot be a sufficient answer, as there are quite a number of other factors that have to be taken into account before deciding whether a particular dasa and bhukthi can cause maraka and will have to be judged from the entire horoscope.

Q. 6. *(a)* What is Vakya method of astrology in general and what is its speciality? Is there any difference in the Ayanamsa followed in this Vakya system? *(b)* Is the rule mentioned in *Brihat Jataka* that if a malefic planet is posited in a trikona and is aspected by another malefic, there will be loss of a limb found to operate in practice? *(c)* What to predict when two contraditory directions occur in respect of two planets under primary arc method, *e.g.*, Venus in 3rd degree of Cancer and Mars in 3rd degree of Leo? For 30th year of the native, progressed Venus will be conjunct Mars radix while progressed Mars will be sextile to Venus radix.

B.S., Madras.

Ans. *(a)* Vakya method is a system of calculation, not astrology. Vakya ayanamsa or very nearly, that is, what is adopted by THE ASTROLOGICAL MAGAZINE. *(b)* You misquote the rule. Aspect by one malefic will not be sufficient but by more than one. We have had no occasion to come across such cases. *(c)* Primary arc is measured along the equator. You give only the positions along the zodiac or ecliptic which is different. Both directions will not occur at the same time because of difference in latitude and declination. The directions you give are what are called converse directions. Of course, these are also included. The other directions will have also to be computed and then only judgment can be made. One direction though contrary or opposite to another direction, both do not cancel each other out. Each will operate in its own way and this has to be merely adjudged in the context of other directional influences that may be present along with these or close to these.

Q. 7. *(a)* What is the relative importance of Rasi chart and Bhava chart? Lagna is 27th degree of Capricorn. Rahu in 7° of Pisces, Jupiter in 3° of Gemini and Mercury in 3° of Taurus. According to Rasi, Rahu is in 4th house, Mercury in 5th and Jupiter in 6th while in the Bhava Chakra it will be Rahu in 3rd, Mercury in 4th and Jupiter in 5th. How to reconcile the two? *(b)* In answer to question 18 in May 1957 issue of THE ASTROLOGICAL MAGAZINE, it is

explained that Saturn retrograde has more strength and in the short-lived and now defunct *Indian Astrological Journal* August 1957 issue, page 46, it was stated that planets in retrogression lose strength. Which is correct? *(c)* For Capricorn Lagna, Jupiter is a malefic as lord of 3rd and 12th houses, but if he is in 6th house, it is a beneficial yoga. Does Jupiter become a benefic thereby?

N.M., Nagpur.

Ans. *(a)* Difficulties arise because you consider them as different charts. But they are to be considered as a single chart. In the example given, the proper way to view is Rahu in 3rd house in sign Pisces, Mercury in 4th house in sign Taurus, Jupiter in 5th house in sign Gemini. The Rasi chart is to be looked to for sign position and the Bhava chart to be looked to for house position only. *(b)* There are different views about the phenomenon of retrogression. In the absence of the reference quoted, it cannot be ascertained in which context the statement is made in the said journal. *(c)* In the above case, Jupiter a natural benefic becomes maleficially inclined by rulership of 12th and 3rd houses. Lord of 12th in 6th gives rise to Vimala yoga which is favourable. Lord of 3rd in 6th gives rise to Mriti yoga which is bad. When both good and bad yogas are present, the effects of both have to be considered. So one good yoga does not convert Jupiter back into a benefic.

Q. 8. *(a)* In *Jatakabharana*, it is stated that one having Jupiter in Capricorn even if he may have Rajayogas, becomes a pauper. Moreover he states that Kemadruma yoga abolishes even 100 Rajayogas. How far do you agree with these propositions? *(b)* In the book by 'Jupiter', 4th house is mentioned as house for education and learning whereas in the above mentioned book he gives the 5th house for the same. Which is correct?

J.J.B., Nadiad.

Ans. *(a)* No value can be attached to such sweeping statements. It should be noted that even this authority confines the effects to Jupiter's Parama Neecha—that is only when Jupiter occupies the deep debilitation degree and not otherwise. Other more reliable authorities and which are followed by a large number of astrologers, affirm that Jupiter in Capricorn though debilitated is strong there, (*e.g.*, Verse 65 of Chapter II of *Jataka Parijata*). "Jupiter is powerful in Meena (Pisces), Vrischika (Scorpio), Dhanus (Sagittarius) and Kataka (Cancer), in his own varga and week day, at midday, in his passage to the north of the equator, in the middle of a sign, in Kumbha (Aquarius) as also his depression sign. He gives much wealth when in the rising sign, in the 4th as well as in the 10th house from Lagna." It has also to be averred that too much is being made about the effects of Kemadruma yoga of which there are several definitions. The exceptions are so many that it is rare to find a case of Kemadruma that is not antidoted. When there are planets in angles from Lagna or Moon or a planet is with Moon, there is no Kemadruma. *(b)* 2nd house, 4th house and 5th house, all relate to learning. 2nd emphasizes the aspect of speech, 4th that of academical learning and 5th true knowledge or wisdom.

Q. 9. In the article on "Methodical Approach to Astrology" by Sri K. Sitarama Rao in May 1948 issue of THE ASTROLOGICAL MAGAZINE, page 353, it is stated that Jupiter lord of 3rd and 12th houses gives beneficial results (*Uttara Kalamrita*), while in other standard works on astrology, Jupiter for Makara Lagna is shown as a malefic because of rulership of 3rd and 12th houses. Kindly explain in what way Jupiter can give beneficial results. Also Venus in 6th house is said to produce good (*Uttara Kalamrita*), while it is said in THE ASTROLOGICAL MAGAZINE in this section that Venus as Karaka for wife is certainly bad in 6th house a dusthana. Kindly indicate in which way Venus will produce good. In *Bhavartha Ratnakara* by B. V. Raman, page 18, stanza 15 (1944 Edition) it is stated that Venus for Leo Lagna becomes malefic in 10th house. Venus in 3rd is good while in tenth he is bad as he owns a kendra besides being located there. Kindly explain. *N.M.C.*

Ans. It is obvious that these are considered as exceptions to the general rule by the author of the article and he has quoted the authorities for this position. Every rule has got an exception and Jupiter is an exception to the rule that lord of 3rd and 12th becomes a malefic, while the statement in the other books mention only general rules. When an equally good authority mentions an exception, we have to accept the exceptions also. Venus in 6th is an exception to the general rule that planets in 6th are generally evil. But as Kalatrakaraka in 6th is a special case and is to be considered as evil for purposes of 7th house, as this is also 12th from 7th. *(c)* This is also a case of exception to the general rule mentioned in *Bhavartha Ratnakara* and treated as such.

Q. 10. *(a)* In August 1957 issue of THE ASTROLOGICAL MAGAZINE, page 690, it is stated that the lord of 12th house Saturn is posited in the second decanate of Cancer which is known as a Scorpio drekkana. The second decanate is ruled by Mars. Please explain how to arrive at a decanate of a drekkana. *(b)* Ref: August 1957, Pp. 705. In answer to question 1 (c), "the Sun conjunction with Rahu in his transits gives the same results, *viz.*, danger from poison, eye trouble, loss of money, etc." You simply state Sun in conjunction with Rahu and do not state whether at birth or transit. Hence this query.

A.W., Colombo.

Ans. *(a)* Your query is a mere jumble of words. First of all you misquote the contents of the answer. The words found in the answer are "which is known as Sarpa Drekkana" and not Scorpio Drekkana. That is perhaps why you put the meanirgless question—how to arrive at the decanate of a drekkana. For both decanate and drekkana mean the same thing. The middle decanate of Cancer is Scorpio and this is known as Sarpa Drekkana. (*Vide verse* 11, Chapter XXVII of *Brihat Jataka*). *(b)* Evidently the question refers to the horoscopical position and not to transits. The answer too is to be taken to refer to it. Therefore there is no need to specifically say it refers to the horoscopical position.

Q. 11. *(a)* How to know from Prasna Lagna whether the querent will win the case in the present court, or by 2nd appeal or 3rd appeal? *(b)* Whether the case may be transferred to another court, and if so, what direction? *R.P.A., Bisauli.*

Ans. *(a)* A query can be judged only with reference to a single question, *i.e.*, a query relating to the success of a litigation in the present court. The prospects of success in one or more appellate courts cannot be judged from this map alone. They will have to be judged from fresh queries put when these appeals are pending. As regards the prospects of success in the present court, lord of 1st house and Sun represent the querent. Lord of 7th represents the opposite side. Lord of 10th, the lawyer. Lord of 4th and Moon show the result. If lord of 1st house and the Sun are stronger than the lord of 7th, then success is likely. Observe whether the lord of 1st or 7th is best aspected for success. The opposite side is likely to succeed if lord of 1st is heavily afflicted by aspect or position. Lord of 1st in 7th house or lord of 7th in 7th or aspecting Sun or Moon is also in favour of the opposite side. Lord of 4th afflicting the lord of 1st or 2nd or

lord of 1st or 2nd afflicting lord of 4th, indicates success for opposite side. (*b*) Normally cases are not transferred by the court *suo motu*. Some party or other should apply for transfer. Then only the matter can be decided by a query. Then the lord of 1st house and the Sun represent the person who puts the query and so on. The matter has to be judged as to success or failure of the transfer petition in the same way as described for a suit.

Q. 12. (*a*) It has been explained in these pages that it is the position of a planet by bhava alone that counts for results. Then how is it in all articles and in examples given in B. V. Raman's works that Rasi and Bhava are assumed to be the same and not differentiated. (*b*) Suppose as per Rasi chart, there are several beneficial yogas which are not there when the bhavas are considered. Can the yoga be said to exist for the horoscope and will the native derive the benefits of such yogas? (*c*) Please explain whether higher shadbala means only greater strength or whether it is to be taken as modifying the malefic nature of the planets only. (*d*) A planet's nature is modified by the houses he rules and a ruler of a bhava is the ruler of the sign in which the cusp of a bhava falls. Suppose, no cusp of any bhava falls in a sign, *e.g.*, Leo. How is the nature of the ruler Sun to be judged in such a case? (*e*) How is the strength of a bhava, *e.g.*, Lagna to be determined to judge which is strongest—Lagna, Moon or Sun?

M.M.C., Nagpur.

Ans. (*a*) It is because the examples treated of relate generally to the lower latitudes where there is usually no difference between Rasi and Bhava. Whenever the difference is significant they are also pointed out. (*b*) The yogas should be taken to be non-existent, unless they also arise as per bhavas in other ways. Take the case of Neechabhanga Rajayoga and the Moon as the debilitated planet. If Mars ruler of Scorpio occupies an angle from Lagna, then there is Neechabhanga. Suppose Mars is in Aries and Libra is the Lagna. By bhava, Mars may be in 6th, 7th or 8th. But there will be Neechabhanga only if Mars is in 7th bhava, But from Aries, Mars aspects Scorpio by his eighth bhava. This causes Neechabhanga according to verse 28, Chapter VII of *Phaladeepika*. (*c*) Shadbala strength means strength for good, *e.g.*, if a malefic Mars has high shadbala, it does not mean that he gets greater power to do evil as a malefic. (*d*) In such cases, the planet's nature is not modified at all. A malefic remains a malefic and a benefic, a benefic, though he may be also considered as ruler of the bhava that crosses his sign secondarily, *e.g.*, if 5th bhava begins 28° Cancer and 6th bhava begins in 2nd degree of Virgo, the Sun may be considered as part ruler of 5th bhava. Hence may be considered as beneficially inclined. (*e*) The strength of a bhava is composed of three factors—(*1*) Bhavadhipathi Bala, (*2*) Bhava Drig Bala, (*3*) Bhava Drishti Bala. For details, vide *Graha and Bhava Balas* by B. V. Raman.

Q. 13. (*a*) When is the Moon benefic and when malefic? (*b*) Ref. Pp. 465, May 1955 issue of THE ASTROLOGICAL MAGAZINE. "Majority of planets if located in the second half of the zodiac indicates rise during the second half of one's life". Is the reverse true? How to count the first half—from Moon or Lagna? (*c*) Does Mars signify all diseases? (*d*) What are the main subjects dealt with in Nadi astrology? How to interpret Nadi astrology? (*e*) Which planet is most beautiful in appearance? (*f*) What is the numerological significance of the birth date 23-4-1920? (*g*) Is it bad to put on new clothes on Monday? *J.M., Seraikela.*

Ans. (*a*) The general rule is that waxing Moon is benefic and waning Moon a malefic. But there is some slight variance as to when the Moon waxes and when it wanes. Some say from 8th day of dark half to 8th day of bright half, the Moon is waning and some say from 5th day of dark half to 10th day of bright half. There are other views also, but as a working rule, it may be adopted that when the Moon is actually increasing, it is benefic and malefic when it is actually decreasing, *i.e.*, from New Moon to Full Moon, with a margin of a few days either way. (*b*) If you count six signs from Moon or Lagna in the order of the signs, it is the first half and the remaining six as the second half. (*c*) Emphatically not. (*d*) All subjects found in natal astrology are found but the emphasis is on the asterisms occupied by planets rather than their sign positions. For interpretation, you should refer to the books on the subject. (*e*) Venus. (*f*) 2 + 3 + 4 + 1 + 9 ; 2+0=21=3, a number ruled by Jupiter. (*g*) Monday, Wednesday, Thursday and Friday are good for wearing new clothes (*vide* B. V. Raman's *Electional Astrology*, Chapter X).

Q. 14. (*a*) What will be the effect when Moon and Jupiter are together in Lagna? (*b*) What are the effects when Saturn, Kethu and Mars occupy second, third and eighth from Lagna respectively? (*c*) How to ascertain success in love affairs when Venus and Rahu occupy ninth from Lagna? (*d*) Is the presence of the Sun and Mercury in 10th from Lagna favourable and if so, how? (*e*) How to ascertain that a native will have education in foreign countries? (*f*) Do you believe in fadic numbers? Please name any Indian authority or this branch of science.

H.K.M, Gauhati.

Ans. (*a*) Verse 34 of Chapter 31 of *Saravali* says: "The native will be either a king or equal to a king, with a well-formed and thick chest, will have a number of issues and relatives and friends and good wife and also good constitution". (*b*) This is not yoga, rather it is not possible to say if any yoga arises or not in the absence of information as to the Lagna, *e.g.*, if the Lagna were to be Libra, it can be said that lord of 5th and 7th aspect each other and there is Rajayoga and so on. Therefore, the effects of Saturn in 2nd, Kethu in 3rd and Mars in 8th have to be studied from books and combined together. (*c*) Love affairs are to be judged from 5th house and Venus the Karaka. Venus and Rahu in 9th do not bear upon this matter and so no conclusion can be gathered therefrom. (*d*) This is said to be capable of conferring Rajayoga, *i.e.*, enjoyment of luxuries appurtenant to royalty, if the 10th house happens to be neither Libra nor Pisces. (*e*) 4th house relates to education and 7th foreign countries. If a planet connecting the two bhavas or if the lords of the two bhavas are connected and are powerfully placed in auspicious houses, education in foreign lands can be predicted. Suppose for Virgo Lagna, Jupiter ruler of 7th and 4th houses occupies Cancer in conjunction with Vidyakaraka Mercury, and is neither aspected by malefics, nor has any other source of weakness such as combustion, debilitation in Vargas, etc., and if Jupiter's Dasa comes opportune, then the native may be said to have chances for foreign education. (*f*) We do. But we are not aware of any "Indian Authority" on the subject.

BANGALORE-3

Significance of Lunar New Year Chart in Mundane Astrology
(*Continued from page 84*)

Moon falls in the 8th house of the chart. Pluto another malefic is posited in Lagna in exact quincunx with its ruler the Sun in the 8th house of the chart. It is also remarkable that Sun has acquired the maraka lordship of the 2nd house and his place in the 8th in a watery sign with malefics clearly points to watery disasters and the resulting deaths therefrom. Progressing the New Year chart, we find on the day of the accident (13–8–1958) the progressed ascendant 7° 28′ Sagittarius in exact square to the New Moon of the yearly chart. It is also interesting to note that the progressed ascendant is squaring the New Moon in the 8th house (denoting death and danger) of the yearly chart.

The Lebanon Crisis

At the commencement of the New Year at Beirut 23° 34′ of Gemini rises with 8° of Pisces on M.C. thus exactly showing the pattern of the chart of Baghdad. The M.C. is conjunct New Moon square Saturn with its lord in the 8th from 10th in an inimical sign conjoined with Rahu and Neptune, thus clearly indicating a change in the Government. On 23-5-1958 when progressed ascendant conjoined transitting Saturn at 29° Scorpio, President Chamoun left the office thus making way to a new successor.

Typhoon in Japan

On the same day Japan witnessed severe loss of lives when a typhoon swept over Tokyo claiming about 500 lives. The chart erected for the commencement of the New Year for Japan reveals 20° 44′ Ascendant and 21° 42′ Gemini on the meridian. This chart also shows some interesting features. Virgo, a sensitive sign rising is closely opposed by Mercury its lord who is very weak. A.J. Pearce in his *Text-book of Astrology* says that Mercury is a planet capable of causing immense changes in weather. He quotes from Ptolemy thus: "In consequence of the dryness of its (Mercury's) nature arising from its proximity to the Sun, and the rapidity of its motion it generates in the atmosphere turbulent, sharp, and variable winds and at times thunders, meteors, and lightnings, accompanied by sudden chasms in the earth and earthquakes". Here in the present chart the exact setting of Mercury (who is weakened very much by being debilitated) has been responsible for the sudden typhoon over Tokyo. We may expect severe earthquakes also. The typhoon swept when ascendant exactly conjoined Kethu in the 8th or house of death on Sept. 25th.

Fall of Pakistan Government

On 8th October 1958, President Mirza abrogated the Pakistan constitution and dismissed the Pakistan Ministry. A chart erected for the commencement of the New Year shows the meridian degree in exact conjunction with Kethu and closely opposed by Rahu, Neptune and Jupiter. Also there is a square from Uranus. The ascendant degree is in exact conjunction with Uranus, the planet of upsets, and squared by Neptune and Rahu. Thus, both the meridian and rising degrees are heavily afflicted, and this clearly indicates the fate of the Pakistan Cabinet. It is also interesting to note that the same signs fall both for the M.C. and the ascendant in the chart of the New Year for Delhi. But the meridian degree is separated from Kethu by about 12° whereas the ascendant is removed by about 10° from Uranus and by about 16° from the opposition aspect of Mars. Hence, the difference in the stability of the Governments though the rising and culminating signs are the same.

On the day of the military take-over of the Pakistan Government, the progressed ascendant was in exact opposition to Uranus separated by about 2 degrees. By one degree progression, the progressed ascendant exactly conjoined exalted Mars. What more clear indications do you need?

Other Events

On Saturday, 18th October 1958, 43 Japanese fishermen were drowned when the 39 ton *Myoju Maru* sank in the sea off Hachinohe, 200 miles N.E. of Tokyo. Progressing the New Year chart of Japan to the day of the mishap we find the ascendant 9° 2′ of Taurus applying to the conjunction of transitting Mars and Pluto.

On Monday, 20th October 1958, a gigantic explosion blew off the midship house of the tanker *Stanvac Japan* about 525 miles N.W. of Bombay in the Arabian Sea resulting in the cruel death of 21 persons including 6 seamen. Since the incident occurred on 20th October at about 2–30 p.m. We have to progress the New Year chart for the previous day, *i.e.* to 19th October 1958. Progressing the New Year chart of Bombay to 19th October 1958, we find the Ascendant to be 10° 5′ of Aquarius separating from the opposition of Pluto and exactly squaring the transitting retrograde Mars in 10° 6′ Scorpio. (The New Year in Bombay commenced at 2–42 p.m. L.M.T. on 20–3–1958).

Thus from these events one can see the validity and usefulness of the Nirayana New Year chart when compared to capsolar or any other chart. The readers may disagree with me on certain points relating to the judgment of the New Year chart, but they cannot escape the sight of the correct pointers shown by the New Year chart with regard to the Mundane happenings at different parts of the globe.

BY S. K. KAR, B.Sc.

*** Sayana Positions of Planets on 1st January 1959, true for 5–30 a.m. (Indian Standard Time).**

THE SUN

The Sun commences to move from 18th degree of Nirayan Sagittarius, and, after entering Capricorn on the 12th, terminates the journey on the 19th degree. He goes to his Perigee on the 2nd and his southern declination decreases from 23° 5′ to 17° 39′ during the month.

THE MOON

The Moon starts on his journey from the 30th degree of Leo, and after completely making a round of the heavens, he proceeds upto the 9th degree of Libra. He crosses the celestial equator on the 1st, 14th and 28th. He goes to his Perigee on the 5th and also on the 31st. He comes to his Apogee on the 17th. He attains maximum declination of about 18° 44′ South on the 7th, and of about 18° 40′ North on the 21st. He reaches his ascending node on 3rd and the descending node on the 16th. He forms with the Sun the following aspects during the month :—

Last Quarter	on	2nd	at about 4 p.m.
New Moon	on	9th	,, 11 a.m.
First Quarter	on	17th	,, 2 a.m.
Full Moon	on	25th	,, 1 a.m.
Vyatipata	on	7th	,, 2 a.m.
Vaidhriti	on	20th	,, 2 a.m.

MARS AND MERCURY

Mars begins to progress from 26th degree of Aries. He enters Taurus on the 19th and then stops on the 4th degree of the same sign.

Mercury commences his journey from the 26th degree of Scorpio. He enters Sagittarius on the 4th and Capricorn on the 25th, and then stops there on the 9th degree. He sets heliacally on the 21st. He crosses ecliptic towards the South on the 12th and reaches his Aphelion on the 23rd.

JUPITER AND VENUS

Jupiter moves on from the 3rd degree of Scorpio till he reaches the 7th degree of the same sign at the end of the month.

Venus starts his journey from the 1st degree of Capricorn, enters Aquarius on the 24th, and then proceeds upto the 8th degree of the same sign. He comes to his Aphelion on the 2nd.

SATURN AND RAHU

Saturn progresses from 8th degree to 11th degree of Sagittarius during the month. He rises heliacally in the East on the 3rd.

Rahu moves back from 27th degree of Virgo to 24th degree.

OTHER PLANETS

Uranus is retrograde and moves in the backward direction from 24th degree of Cancer to the 23rd degree.

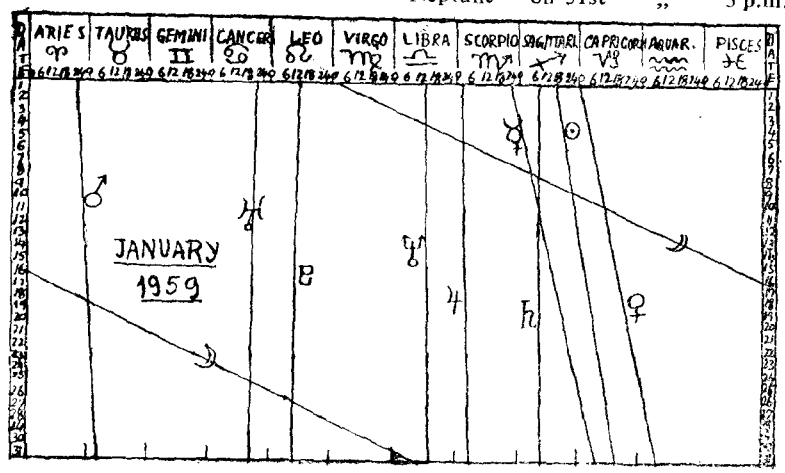
Neptune moves on slowly from 14° 45′ of Libra to 15° 7′ of the same sign.

Pluto is retrograde and moves back from 12° 14′ to 11° 41′ of Leo.

LUNAR CONJUNCTIONS

The Moon will form conjunctions with planets in the following order :—

Neptune	on 4th	at about	11 a.m.
Jupiter	on 5th	,,	6 p.m.
Mercury	on 7th	,,	9 p.m.
Saturn	on 8th	,,	5 a.m.
Sun	on 9th	,,	11 a.m.
Venus	on 10th	,,	2 p.m.
Mars	on 19th	,,	7 a.m.
Uranus	on 25th	,,	8 p.m.
Pluto	on 27th	,,	4 a.m.
Rahu	on 30th	,,	4 a.m.
Neptune	on 31st	,,	5 p.m.



*The R.A. is always given on Sayana basis, while in the description of planetary movements, the longitudes are given on Nirayana basis, the current Ayanamsa being 21° 49′ 34.6″.

POURNIMA (FULL MOON) AND AMAVASYA (NEW MOON) TITHIS

Commencing moments for the meridian of New Delhi. (28° 39' N., 77° 13' E.)

I. Pournima tithi commences at 1/32 a.m. (I.S.T.) on 24th Jan. 1959

Cusps of Houses:—Ascendant 202° 14'; 2nd 233° 35'; 3rd 264° 57'; 10th 116° 4'; 11th 144° 56'; and 12th 173° 34'.

Nirayana Positions of Planets

The Sun 281° 15'; the Moon 89° 16'; Mars 31° 17'; Mercury 267° 26'; Jupiter 215° 56'; Venus 298° 50'; Saturn 250° 13'; Uranus 112° 56'; Neptune 195° 5'; Pluto 131° 52'; and Rahu 174° 1'.

II. Amavasya tithi commences at 1/11 p.m. (I.S.T.) on 8th Jan. 1959.

Cusps of Houses:—Ascendant 18° 30'; 2nd 44° 14'; 3rd 69° 58'; 10th 275° 43'; 11th 309° 59'; and 12th 344° 15'.

Nirayana Positions of Planets

The Sun 265° 27'; the Moon 253° 26'; Mars 26° 56'; Mercury 244° 56'; Jupiter 213° 27; Venus 279° 24';

ASTROLOGICAL APPRAISEMENT OF BEHAVIOUR-PATTERNS

(Continued from page 154)

the *Keraleeya Jatakasara*, does neither hesitate, nor waver, in the facts and theories embodied in the work, and throughout the work, there is an unmistakable ring of authoritativeness and even some sort of finality.

That is perhaps, the main reason, why the work made a direct appeal to my mind and I thought, I might place some of the concepts contained therein, before your readers, in the hope that more active and better-informed, amongst your talented readers may throw further light on the subject.

It is no exaggeration to say that all behaviour-patterns are severely conditioned and hemmed in this way and that, beween a number of forces, physical, social, economic, political, and so forth. Where a given behaviour-pattern is arrested in its adjustmental forward march or movement, by environmental forces and circumstances, the subject finds himself in difficulties. Of course, he or she, has the freedom to act, to subdue or conquer the adverse environmental forces, and direct behaviour to happy and successful termination. All this sounds attractive enough in theory and on paper. In practical life however, it is certainly not given to all to obtain a victory over the environmental forces, which, often prove to be formidable and overwhelming.

Environmental obstructions and obstacles very often bring about something like a shipwreck of personality. It is a profound truth that shipwreck of personality is more disastrous than the ordinary physical shipwreck brought about by violent storm or tempest.

It is very natural and pertinent to investigate if astrological appraisement may show the way.

As far as I am able to see, I can make bold to assert that astrological appraisement would show the way out of more than one difficulty confronting subjects in directing behaviour-patterns to adjustmental harmony, after liquidation of obstructing environmental forces.

Public life in any country is like a stream. Only the lightest, feather-weight champions merrily float on the surface of economic and political current. Consider for a moment the swift and electric developments that have taken place in Iraq. Death, violence, frustrated behaviour, on one side, and on the other, jubilation, victory, change of government and so forth, must make all decent-minded persons think furiously. Are the behaviour-patterns of modern man and modern mankind directed in or along health, moral and spiritual channels? Is any endeavour, anywhere being really and genuinely made, for the establishment of Kingdom of God on Earth? These are disturbing and disquieting questions, provided you commence thinking at all. Astrology furnishes an answer. Each must bear his or her own cross. Each must work out his or her own *Karma*.

How and in what directions the different behaviour-patterns of individuals, groups, and Nations would be driven by *Karma* can be ascertained fairly correctly from a study of astrology. Today, they are endlesssly talking of summit-talks, international conferences and so forth. So long as the two irresistible urges—*meum* and *tuum* (mine and thine) drive mankind in different directions, it must be difficult to find a lasting or permanent solution to the so-called world-problems.

Years ago, the Gita listed *Three Gateways to Hell.* They are desire, anger, and covetousness. (Kama, Krodha, Lobha—Gita 16-21). International behaviour-patterns are dominated by these. They are governed by the seven unfavourable houses pointed out by *Keraleeya Jatakasara*.

Unless and until behaviour-patterns are directed along the moral and spiritual channels indicated by the five favourable houses, neither individual nor group peace and happiness would be enjoyed. I hope, in due time, mankind may realize the mischief of misdirection of their behaviour-patterns.

I desire, to submit, in conclusion, that what I have stated, here, is purely provisional and tentative. I am perfectly willing to learn and get corrected by those better-informed and more devoted to research. One thing is certain. The zodiac is a grand and imposing epitome of all behaviour-patterns, individual, communal, national, international and the like.

FOR JANUARY 1959

By MIHIRA

"ASTROLOGY is taken from the records of astral phenomena and reduced to a science for observing the effects of planetary influence, commencing with the history of man; these observations being compiled and recorded by some of the brightest intellects known, both ancient and modern. To test its reliability, its truths, and the advantages, requires only earnest unprejudiced investigation. By it the inequalities of humanity are explained and much light is shed upon the path leading to improvement of conditions for all living things."

—*Llewellyn George.*

WEATHER

High winds and rains about 25th, otherwise mostly dry.

COMMODITIES

Gold.—From the very beginning, rise can be expected but there may be some reaction after 9th or 10th.

Silver—Uncertain trends. Better to sell on every rise as reaction may soon follow.

Other Articles.—Trends uncertain. Rise and fall alternate throughout in respect of most articles.

DAILY GUIDE.

1. Yogam not good for the beginning of any agricultural activity; observe routine or as a holiday.

2. L.D. not suitable for the beginning of any activities; stick to routine such as digging, weeding, fencing, levelling, raking, etc.

3. Yogam not good; L.D. too not propitious; therefore observe holiday or stick to routine.

4. An alround good day; manuring, planting and ploughing can be begun and conducted; for best effects, use chemical

5. An ordinary good date; specially suitable for planting, harvesting, purchase of grain, defraying paddy, purchase of cattle, etc., *during day only*.

6. Day part good (*i.e.*, until nightfall) generally; manuring and ploughing can best be done; for best effect, use farmyard manure or organic manures.

7. Yogini towards sky after 3 p.m.; yogam bad after 4-40 p.m.; therefore all activities and new beginnings till 3 p.m. only; but asterism suitable only for purchase of cattle and sinking wells.

8. Yogini towards sky or earth whole day and night; avoid ploughing, planting, manuring, but grain and cattle can be purchased or sold.

9. Yogini towards earth till 11-40 a.m.; even thereafter L.D. not so good; asterism not auspicious also; good only for purchase of cattle.

10. An ordinarily good day after 10-40 a.m. for planting, manuring, harvesting and also storing grain.

11. Yogini bad after 2-50 p.m.; till then a good day for ploughing and planting, also purchase of grain.

12. An ordinary day.

13. Marana Yogam throughout day and night; avoid all new beginnings and auspicious activities.

14, 15 & 16. These are generally considered as unsuitable for any new beginnings called charcoal days.

17. L.D. not good for any activity; stick to routine only.

18. Yogini towards sky or earth throughout day and night; avoid planting, ploughing, even manuring; asterism also evil for all purposes.

19. Marana Yogam day and night; avoid all new beginnings.

20. A good day for ploughing and manuring; also generally good for all purposes; for best effect, cattle manure intensively.

21. A very good day for manuring—both for cattle manure as well as artificial manures; for best effects, mix both.

22. Marana Yogam throughout day and night; avoid all new beginnings and confine to routine matters only.

23. L.D. not favourable for new beginnings or activities; keep to routine matters only.

24. A good day for beginning harvest and storage of paddy.

25. L.D. not good for new beginnings; other work can be pushed through.

26. Asterism not good till 12-30 p.m.; Yogini inauspicious thereafter; keep to routine work only.

27. Good generally till 11 a.m.; best for manuring and ploughing; for best effect, use chemical manures.

28. Yogini towards sky or earth day and night; avoid ploughing, planting and manuring also.

29. Yogam bad till 9-45 p.m.; all activities to be avoided till then; Yogini towards earth till 7-20 p.m.; avoid planting and ploughing as also manuring for whole day.

30. A generally good day for all matters, specially for manuring and harvesting operations, also for dealings in cattle.

31. Marana Yogam whole day and practically the whole of night also; avoid all new beginnings.

SOME ASPECTS OF NADI HOROSCOPES

(Continued from page 88)

Tamil 4-line verses contained the past, present and the future. Eight years have passed and so far one cannot complain. It gave the exact place of birth, in Colombo, near the sea. It said that the grandfather was a post-master—"receiving news from four quarters and redistributing them." The sudden death of the father occurred as foretold. The results of two Medical examinations were correctly indicated. And for last year (1957) the prophecy was: "At the age of 25 you will be transferred to a place surrounded by rocks." This place is well-known to me and there are no gigantic rocks today but the name in Sinhala is *Galewela*—Rockfield. This name suggests that in the dim past there were large boulders strewn all over and round the village which is now a town.

Much more could be said about the *Nadis* but the learned Editor must be already pressed for space although he has very kindly invited me to contribute an article for his usual bumper Annual. Before concluding I wish to give a few opinions of esteemed readers of THE ASTROLOGICAL MAGAZINE on some aspects of these valuable sources of astrological knowledge :—

"Sri of.....(India) has a few hundreds of bundles of ola leaves and hundreds of people come to him for consultations and unfortunately, I think, all are duped. I have consulted him many times and nearly a dozen of my friends have consulted him and we have paid him in hundreds. I think I have paid him more than 200 rupees but of course on good causes like *Shanthies, Vratas* and feeding of Brahmins which is not a waste but what I have paid him on consultations is a mere waste of money."

"Certain authors of importance have told me that certain Nadis are called *Mântra Nadis* which give you all the details of your past and do not give anything of the future. But I am not an astrologer nor have I any idea to suggest particularly to a person like you."

"If you come to this place (Bangalore) I will be only too happy to take you to Kolar and here you can see for yourself a whole lot. Recently he has found out a bundle on which it is written *Anusakti Vidhanam*—manufacture of atomic energy. He told me that he intends to send it to Sri Nehru so that it can be of some use to our country."

"Sri M. K. Ganapathy Iyer whose articles you might have read in THE ASTROLOGICAL MAGAZINE informs me that there are certain Nadi *granthas* in Coimbatore and Hyderabad though a costly affair can be very conveniently relied upon. If you can contact him I think he may be able to give you exhaustive ideas about nadis because, in my opinion, he appears to have made a complete study of these Nadi *granthas*."

The mention of atomic energy in para 3 above reveals the powerful vision of the sage who peeped into the yet far distant life on this planet. We read recently in the Press that a British scientist has almost succeeded in creating test-tube babies. This too was anticipated by Rishi Agasthya and one of the men who will do it will be the son of a Tamil father and a Sinhala mother. The couple got married recently after a love-episode in Nepal in the dim and distant past. The would-be father's leaf says: "Your eldest son will discover something new that will change the sexes. Children will be made to be born by him without the union of male and female. He will be famous and will return to the island of Lanka when you are 57 and will marry your sister's daughter."

The astro-palmistry part of the Agasthya prophecies is indeed a remarkable feature of ancient Hindu astrology. The leaves show that the persons now concerned with worldly matters were important personages in a past existence and that they are working out their salvation or damnation in this existence. If the past is correct there is no reason why, in quite a large number of cases, the future has been a total blank. There is a possible explanation. Certain ola bundles contain disjointed horoscope readings and a thorough mix-up after the copies were made from the original Sanskrit works.

FOR JANUARY 1959

BY MIHIRA

"THESE precepts (regarding elections) may be considered ridiculous and unnecessary by persons who are unacquainted with astrology, but there can be no harm in observing them. We should prefer observing them, when possible, to running the risk of failure by beginning an important transaction at an unfortunate moment. Apart from astrology, it is difficult to understand why some businesses fail notwithstanding that capital, energy, and industry have been brought into them; or why one ship whose keel was laid at one hour proves fortunate investment, while another, whose keel was laid at another hour, proves a most unlucky one. Some transactions seem doomed to failure from their inception and even the enemies of astrology speak of such as "ill-starred" affairs although unaware of the meaning of this expression."

—*A. J. Pearce.*

"The nature of the forces operating at any given moment depends upon the nature and disposition of the several planets at the moment concerned. Instances of loss of life, loss of money and distress and disappointments to the traveller because the journey was undertaken when the planetary vibrations were inharmonious can be cited *ad infinitum*".

—*B. V. Raman.*

Yatra Panchakam.—Add lunar date, day, asterism and Lagna for the time and date of proposed journey and multiply by 15 and divide by 9. If there is a remainder of 5, it is called *Roga Panchakam.* If multiplied by 12 and divided by 9, there is a remainder of 5, it is called *Agni Panchakam.* If multiplied by 10 and divided by 9, there is a remainder of 5, it is called *Chora Panchakam.* If multiplied by 4 and divided by 9, and there is a remainder of 5, it is called *Mrityu Panchakam* and the consequences respectively are disease and sickness, fire or heat, theft, death. These dates should be avoided for travel.

—*Kalavidhanam.*

DAILY GUIDE

1. Marana Yogam till 4-15 a.m. (night); journeys safe thereafter; till then avoid journeys at least towards south.

3. Marana Yogam till 10-45 p.m.; journeys only thereafter; till then avoid journeys at least towards east.

6. Marana Yogam after 6-5 p.m.; avoid journeys thereafter at least towards north.

7. Yogini towards sky after 3 p.m.; Marana Yogam after 4-40 p.m.; start on journeys before 3 p.m.; avoid journeys towards north.

8. Yogini towards earth or sky day and night; avoid air journeys at least towords south.

9. Yogini towards earth till 11-40 a.m.; air journeys safe thereafter; avoid journeys towards west.

11. Marana Yogam after 2-50 p.m.; avoid journeys thereafter especially towards west.

13. Marana Yogam whole day and night; avoid journeys at least towards north.

17. Yogini towards sky after 5-20 p.m.; avoid air journeys thereafter at least towards east.

18. Yogini towards sky or earth day and night; avoid air journeys at least towards west.

19. Marana Yogam throughout day and night till 6-20 a.m.; avoid air journeys; asterism too evil; Yogini towards earth till 9-45 p.m.; all the more reason to avoid journeys by air; towards east specially evil.

22. Marana Yogam day and night; avoid journeys especially towards south.

26. Marana Yogam after 12-30 p.m.; avoid journeys thereafter especially towards east.

27. Yogini towards sky after 11 p.m.; avoid air journeys thereafter at least towards north.

28. Yogini towards sky or earth whole day and night; avoid air journeys at least towards north.

29. Yogini towards earth till 7-20 p.m.; Marana Yogam till 9-45 a.m.; avoid journeys by air especially towards south.

31. Marana Yogam till 5-5 a.m. (night); avoid journeys especially towards east.

Varshaphal

OR

THE HINDU PROGRESSED HOROSCOPE

Based on Tajaka (6TH EDITION)

By B. V. RAMAN

This book based on Tajaka covers fresh grounds in the field of prediction. It describes a unique method never before disclosed for deciphering annual life readings. Predictions made according to this work yield unique results. Whether you are a layman or initiated, you can draw up and interpret the annual reading in an easy and scientific manner. The system propounded in the pages of this work is rational and in actual practice yields most satisfactory results.

OPINION

"The author outlines a method of deciphering annual results from the Hindu horoscope. He claims that the principles of Tajaka astrology have been found to work accurately in actual practice, and controverts the orthodox belief that the system can be applied only to charts of individuals who have passed the age of thirty. There are many useful tables at the end and a summary."

STARS IN THEIR Seasons

BY M. V. RAMAKRISHNAN, M.A., L.T.

Night Sky in January 1959

Zodiacal Constellations

THE zodiacal constellations that are visible this month at about 9–30 in the night, are from west to east Aquarius (Kumbha), Pisces (Meena), Aries (Mesha), Taurus (Vrishabha), Gemini (Mithuna) and Cancer (Kataka). Aquarius is setting, and you can see the lunar asterism Satabhisha a little above the western horizon. Aries and Pisces have crossed the meridian. The three stars of Aries are seen as a beautiful pendant high in the north-western sky. The lunar asterism Aswini can be identified in this group. The three stars forming the asterism Bharani are seen a little below Aswini. The asterism Revati in the Pisces group is the third star from the junction star in the lower arm of the V, which is the shape of the constellation Pisces. Taurus is seen high overhead with its principal star Aldebaran and its famous clusters Hyades and Pleiades shining prominently. Gemini is seen high in the north-eastern sky, and you can recognise its twin stars Castor and Pollux, which form the asterism Punarvasu.

Non-Zodiacal Constellations

Among the non-zodiacal constellations, Ursa Minor is seen balancing on its head, with Alpha Minoris the pole-star directly towards the north. Cassiopeia and Cepheus have crossed the meridian. Pegasus and Andromeda also have crossed the meridian and are seen in the west-north-western sky. You can identify in these constellations the lunar asterisms the Bhadrapadas. Orion is approaching the meridian ; and starting from the star Rigel at the foot of Orion runs the celestial river Eridanus southward and ending at the bright star Acherner. Canis Major with its principal star Sirius, the brightest of the stars in the sky, is seen high up in the south-east ; while Canis Minor with its principal star Procyon is seen above the eastern horizon. In the south-eastern sky you can also see Argo Navis in full sail, with its principal star Canopus at its tail-end.

Lunar Asterisms

The lunar asterisms that can be identified in the visible hemisphere are Satabhisha in Aquarius, the Bhadrapadas in Pegasus and Andromeda, Revati in Pisces, Aswini and Bharani in Aries, Krittika and Rohini in Taurus, Mrigasira and Ardra in Orion, Punarvasu in Gemini, Pushya in Cancer and Aslesha in Hydra.

The Milky Way

The Milky Way is seen to extend from south-east to north-west, passing through or between the constellations Argo Navis, Canis Major, Canis Minor, Orion, Taurus, Perseus, Auriga and Cassiopeia.

[The chart should be held in such a way that the horizon marked at the bottom in the chart corresponds to the horizon the observer is facing. Then the constellations he sees before him from the horizon to the zenith will be found in the chart from the bottom to the centre. The constellations to his right and left will be found in the corresponding positions of the chart].

General Commercial Indications for 1959

[This study is not intended as a tip for investors to follow. The writers have arrived at certain conclusions regarding Cotton, Commodities, etc., *mainly based on planetary influences.* Those who act on this information will be doing so at their own risk.—*Ed., A.M.*]

By D. R. MUNSIF, B.Sc. (Econ.) (London), B.A. (Hons.) (Bombay),
5/1, Russel Street, Royal Court, Calcutta-16.

IN the 1958 annual number of The Astrological Magazine, a few general forecasts were given on the basis of solar returns, planetary cycles, and other astronomical phenomena like occultations, etc.

While giving the particulars of planetary cycles, it was forecast that January and February were to be bullish. In May a reaction—Rahu's conjunction with Jupiter—was given to lift the prices in July. All these general forecasts have proved correct. At the time of writing this in August 1958, events of September and onwards are in the limbo of time but by tne time the Annual is published in December 1958, readers will have no regrets in having followed the suggestions given in the previous annual.

Along with the stock-market rise, we predicted an economic crisis, unemployment and business failures. Further on the basis of Jupiter's and Neptune's cycles, total failure of the much discussed Disarmament Conference was predicted and the cycles between Uranus and Neptune were considered to be an augury for the spread of communism. The ferment in the Arab World and conditions in Indonesia have amply borne this out. As a further proof, events in Egypt, Tunisia, Algeria and Ghana in Africa give a red signal in the same direction.

The results obtained by the application of principles underlying the planetary cycles, are so remarkable that the whole technique of predicting from aspects between planets can be said to be a new instrument in the art of mundane astrology. But in fact we cannot say that it is a question of our pure and simple invention because Ptolemy in his "Meditations" has remarked in one very significant sentence: "One must observe with care everyone of the 119 conjunctions of planets because it is from them that one acquires the knowledge of mysterious forces which produce in the world generation and corruption". On the other hand, Ptolemy was not the only person to remark on the importance of cycles. In *Mundane Astrology* of Morin de Villefranche, we find in equal measure the precise indications on the subject which carry the discussion still further because Morin talks about the evolution of cycles and their relation to subsequent aspects which develop as the planets proceed on their onward march. But the ancients had no knowledge of the transcendant planets Uranus, Neptune and Pluto to which we pay now so much importance.

What exactly do we understand by planetary cycles? The mundane events are determined by the co-ordination of several tendencies which cause, evolve and pass on to a maximum of amplitude and then begin to decrease in importance and thus the order of humanity on this earth follows the cosmic order; thus the technique of planetary cycles has an impact upon the times and brings about events which we discern by interpreting the planetary phenomenon.

To illustrate this theory of planetary cycles that a conjunction between two planets gives birth to some precise tendencies at the moment, it will be sufficient to refer to the New Moon cycle. Thus the chart drawn for the exact time of the conjunction of the two luminaries is valid for the 28 days at the end of which another conjunction takes place. The tendencies which are not very prominent at the time bear fruits during the course of the month. They attain the maximum at the time of the Full Moon, *i.e.*, when the Sun and the Moon oppose each other after which they diminish in importance. To arrive at the purely astrological considerations, we should note the successive transformation of tendencies expressed by the different aspects which follow.

During the year there are particularly two sets of cycles that play an important part throughout the year. Of the two, one is preponderantly obtruding itself on the political plane and that is the cycle of Pluto and Neptune. Both of them remain in sextile aspect throughout the year. But during the first half, the sextile aspect is not so important because the aspect is not exact. For the aspect of such trans-saturnine planets to play a part on this plane, the orbs should be narrower than we allow for the planets round our solar system. The cycle plays an important part soon after July. Neptune is the planet of communism as well as that of the Arab world. We must remember that this aspect takes place after the square aspect between Uranus and Neptune which was termed as the winter of capitalism in the 1958 Annual. This square is now stimulated and Pluto adds its significance to the communist philosophy of the world. Pluto is deemed to be a planet of integration but with a malefic colour. I would therefore add that the communist countries will unite still closer and the powerful among them will be able to impose their will completely upon their lesser neighbours.

Neptune engenders and spreads chaos in the economic world but with Pluto's configuration added to it, the economic structure will begin its reintegration around completely new lines. The pattern of the existing international trade will be transformed, more and more synthetic materials will come on the market, plastics will replace the existing hard materials. Neptune is connected with mineral oil and Pluto's configuration shows that more and more compounds based on oil chemistry will be developed. Finally, Pluto's integrating forces will bring new discoveries in the field of atomic science and harness those forces which build up the atom and not split the atom.

For good or for evil, the Arab world is going to intrude more and more on the international political sphere. Whenever Neptune was stimulated during 1958, incidents in the Arab world played an important part in attracting the attention of the world to itself. All this is discussed at length because the reintegration of economic structure will destroy existing trades and even some industries and bring new ones into existence. Cotton industry will be hard hit while jute is likely to flourish. Chemicals will soar up, oil will be very much in demand with mineral and vegetable; the latter because Pluto is in Virgo. The science of food production will be entirely reorganised. A few revolutionary discoveries will take place in this field. On the whole, there will be a sustained upward surge of values on the stock-exchange from August 1959 onwards, with a few reactions and the bears during the period will be annihilated; but despair is the watchword for cotton industry. Small companies will

merger into large units with the result that monopolistic instituitions will play and determine the economic policies all over the world.

The year 1959 begins with a sesquiquadrate between Saturn and Uranus which again reforms in July and August. The three months of January, July and August will engender false hopes in the breasts of bears. There may be a decline here and there but this is the right time to pick up a few good scrips. In November, Jupiter stimulates both Neptune and Pluto, forming semi-sextile with Neptune and square with Pluto. The aspects between Jupiter and Neptune are usually inflationary. Such a semi-sextile occurred in 1908, when the labour party was formed in England and large scale measures of social legislation were introduced in England and Australia. Once again in 1918, at the end of the Great War, the world was deluged with paper-money. In 1933, under the force of this aspect, the failure of disarmament occurred and Germany under Hitler and Italy under Mussolini followed such economic policies as to conquer unemployment at home and introduced championistic propaganda in the political life of Europe. In 1933, it was the New Deal of Roosevelt in America while in 1944, the world was in the grip of the second World War. This year, since it stimulates both Neptune and Pluto, its effects are likely to be more inflationary. I warn therefore the bears both on the stock and commodity markets. There will also emerge a scarcity of foodgrains and raw materials and specially oilseeds.

While forming a semi-sextile with Neptune, Jupiter forms a square with Pluto. Here comes a real danger of war. It occurred in 1934 and 1940. The former was marked by the withdrawal of Germany from the League of Nations while during the latter year, there was a rupture of the Soviet-German Pact. All this led to a heavy armament programme which brought about a rise in the prices of the new products of the world. Similar conditions will emerge in 1959 specially in August and September of the year.

In March, Uranus is sextile with Rahu—this lifts up the prices of Electric Company shares and of companies manufacturing electric equipment, radios, television, etc. This also will raise the price of raw jute and jute shares. In August and September, the semi-sextile between Rahu and Neptune adds fuel to the fire of inflationary forces and brings war nearer to this world of ours.

In March, April and May 1959, Saturn remains in close sextile to Neptune. Within living memory, such aspects had occurred in 1922-23 and in 1946-47. During the former period, stabilisation of the communist revolution emerged, the organisation of the Soviet States was brought about and the constitution of 1923 was declared. The Russian Soviet State once again entered into the international community. In 1946-47, the restoration of Soviet economic life after the ravages of the war was brought about, and the Soviet expansion took place. At this time on April 8, 1959 occurs an eclipse with Saturn in the 10th house, Sun in the 1st house and Mars in the 8th house for the map drawn for Berlin. It brings the war once again to the doors of Central Europe. It is a time of the cold war at its highest level. One cannot say whether war will actually break out or not, but it certainly brings the efforts of communist expansion to the fore. As an indirect consequence of this cycle, prices of raw commodities will leap up.

In short, this year means not only the exit of bears but their annihilation except in cotton industry and small economic organisations. The Arab world will try to emerge as a great power under the inspiration of the communists but will remain a distinct entity to try its strength somewhere at the end of the century to establish successfully an empire of its own.

Buy shares of oil companies, electric companies, chemical companies, jute companies and metal companies and of those manufacturing food products. All the foodgrains and raw materials will rise to new heights along with leather. Remain on the side of bulls but there will be very heavy reactions of short duration for which watch the comments in the monthly issues of this magazine.

One more significant fact to note that very early in January, Saturn enters Capricorn—the tenth sign having a sway over big business and organisation. It is well aspected with Pluto and later on it advances with Neptune. It will enable therefore men of business to consolidate the gains and strengthen the foundation on which a big edifice can be built. But its association with both Neptune and Pluto indicate that once again the death-knell of the ballot box is being sounded and all over the world dictatorial trends will emerge and gain strength. Since our country is supposed to be ruled by Capricorn, we shall not escape the propaganda for dictatorship of one kind or the other.

BY A. P. SATHE
Dr. Deshmukh Building,
Dr. Deshmukh Lane, Bombay-4

Before discussing the planetary positions, it will not be out of place to discuss the general economic conditions as they appear in 1958. A student of economics will come forward with statistical figures and prove that money is now easily available and Banks are having surplus funds since last two months (these notes are being typed in August 1958) but as a common man what I find is that the economic condition of masses stand at a very low ebb. It is hardly possible for an individual whatever his income may be to meet two ends or to maintain his standard of living. What we are living today is an artificial life. Just to explain what I mean, I cite an example here from commercial field only. You might be reading reports that cloth consumption has gone down. Stocks are mounting and the Textile Mills are facing the danger of closure. How in the rising index of population with the number of mills standing as they are cloth consumption is ever coming down is a problem beyond my imagination unless there is what is called strict buyer's resistance. That position is yet to come. If, however, the hue and cry about accumulation of stocks is true, would not have cloth prices come down to some extent? Nay, they are rising. It only means that traders, stockists and millowners irrespective of the fact that stocks are rising, are in a position to hold the stocks and maintain higher price levels, being afraid of the slump in prices. This is true not only of the textile trade but other trades and individuals also are experiencing the same situation. Every one is trying to keep the balance and maintain his standard but no one knows when this bubble will burst. I call this status as false and artificial. In this so-called socialistic pattern of society labour and agriculturists representing 90% of the population are still facing the danger of ever increasing cost of living. In relation to these factors that are now prevailing, it will be worth while judging the major planetary transits in the year 1959.

Saturn.—During the whole year of 1959 Saturn transits Sagittarius, the nakshatras transitted being Moola and Purvashada. While for the major period Saturn transits Moola, only for a short period (from 24th March to 10th May) the transit is in reference to Purvashada. In my last Annual Report I had discussed in detail the effect of Saturn's transit of Dhanus, but at the same time had expressed

doubts as to how far the effects could be visible, since then Saturn had not finally left Scorpio. During the year under review full effects of this transit would be witnessed. This transit is taken to be bearish and indicative of depression. Depression does not necessarily mean slump in prices, but unsatisfactory working and living conditions for the masses. Anyway astrological indications and the reading of Saturn's transit in Dhanus are to be that there would be slump in prices and steadily within the next 2½ years prices would come down to comparable levels. There is no need for an astrologer to state that prices of foodgrains would still be on the higher side because of the fact that the population is going steadily up, while crop production has come down with all the plans in force. Other commodities or items which are not of first necessity will show abnormal fall. Dhanus falls in the 12th house from the rising sign of the country. 12th house transit of this planet cannot be said to help economic development. Square aspect between Rahu and Saturn indicates that many unexpected factors will crop up and stop the progress. Political atmosphere will not be free from conflicts and labour problems will add fuel to the fire. 12th house in a National chart represents coal and gold storages, fishing, fishery, prisons, hospitals and asylums. All these will be hard hit during the transit of Saturn through Dhanus. Mine labour will create serious troubles. The recent proposals about gold bond issue are just an indication as to how Saturn's transit in Dhanus is likely to produce results. Some such measure greatly affecting trade pattern in all these sections cannot be overruled, during the period of Saturn's transit. While comparing the nakshatra transits, Purvashada is comparatively helpful for general economic conditions and this transit of short duration will prove highly bullish; though at the very time many individuals will experience strife in domestic sphere. This planet has a role of *Rasesh* (रसेश) during the Saka year 1881. This factor also indicates scarcity of metals in general. It may be stated here that stringency in supplies of metals like steel, tin, gold, copper will be felt and prices of all these along with rubber will be very bullish during the whole year. Saturn as lord of masses—labour and agriculturists—will not be happy and labour tussels will prove a great hindrance in the economic progress of the country during the year under review.

Jupiter.—This planet represents food and clothing in a national chart. As a general benefic, on the transit of this planet one has to look to the general conditions about foodgrain supplies. Jupiter passes through Thula and Scorpio, nakshatras transitted being Visakha, Anuradha and Jyeshta. Transit from Thula is taken to be fairly good for crop availability. Distribution of available crops, or foodstuffs will be properly maintained thereby keeping the price under strict vigilance and control. While general transit from Scorpio is thus helpful, the transit from nakshatra Anuradha in the latter two navamsas is taken to be bullish. During the year under review, Jupiter retrogrades on 19th March and remains so till 20th July. In the months of June and July the transit is from Thula, which is favourable for crops. Along with this the fact that during Saka year 1881 Jupiter is the 'King' and is also *Agradhanyesh* (अग्रधान्येश) indicates that monsoon crops will be quite good; though the crops available in the latter half will be damaged. From the point of view of production of foodgrains, Jupiter is helpful. For crops usually produced in the latter part of the year, this transit will help in bringing down the price level of essential goods.

Rahu.—This point of revolution is most important when one has to judge the progress of economic development. The transit of Rahu during the whole year contains Chitta (upto 28th January 1959), Hasta (till 28th October 1959) and Uttaraphalguna (till 28th October 1959). Till Hasta transit is taken to favour rise in values of all exportable goods as also progress in industrial sphere specially engineering undertakings and big factories.

Two divergent forces seem to be acting here: Rahu's transit in Virgo helping the economic development as also foreign trade, while Saturn's transit and aspect on the 9th denotes quite contrary results. It may be stated therefore that bouts of rise and fall in values of stocks and shares and exportable commodities would be indicated in the whole year; and it is necessary that traders remain within their limits if they wish to avoid from their being trapped in these wide fluctuations.

Mars.—Among the minor planets, this needs utmost consideration since as lord of the 4th house—house of produces—on the strength of this planet depends the extent of rise or fall of commodity values. By nature a fiery element, twisting of price structure depends mainly on Mars.

Commodities.—It is not possible to discuss in this article the various solar ingress charts, but after taking the transit of Mars, and the four quarterly Sankranti charts (Makara, Mesha, Cancer and Thula), I give below periods indicating good rise:—

1. Makara Sankranti to Mesha Sankranti:

   24th January to 18th February.
   17th March to 31st March.

2. Mesha to Cancer Ingress:

   10th April to 13th May, most erratic and wide both fluctuations. Note this period.—
   11th May to 30th May rise.
   9th June to 22nd June rise.
   9th July to 16th July rise.

3. Cancer to Thula Ingress:

   3rd September to 27th September.

4. Thula to Makara Sankranti:

   17th October to 3rd Dec. 1959.

Cotton and Allied Products.—Saturn's transit of Moola and Purvashada cannot be classified to be unfavourable totally for this particular commodity. While Saturn transits Moola, Punarvasu (one of the major cotton nakshatras) remains under Vedha and this fact should help to keep the prices of this commodity on an average on higher side. This factor will however be very bullish for U.S.A. Cotton since there is every likelihood that cotton crop in U.S.A. will fail to a great extent. Sagittarius transit of Saturn is a factor for general depression. How the price of this commodity will be maintained is a factor for consideration. The high level should be fixed after understanding the technical considerations by the traders. Jupiter's transit is not helping rise. Monsoons will be favourable and during the monsoon period will the cotton prices really suffer a good set back. Otherwise prices will on an average be on the higher side because of intermittent martian transits coupled with Saturn's transit to help the sentiments. I may state here that the months of February, March, May, October, November and December will be highly bullish. The movements in other months will be narrow and bearish.

Oilseeds.—Irrespective of the fact that exports are likely to go up during Rahu's transit in Virgo and that our Government is bent upon helping the export drive, Sagittarius transit of Saturn is expected to hit this section more; along with the fact that Government will have to restrict prices of foodgrain varieties since the domestic market will otherwise badly be affected. Distribution will also be

properly arranged for by the Government. I therefore anticipate that this section will remain subdued during the whole year; or if necessary Government will take up this section under their control to keep the parity in price through the State Trading Corporation. April, June, July, August and September are specially bearish.

Metals and Bullions.—Saturn's transits are likely to change the trade pattern in precious metals. I expect that perhaps forward trade in this section will come to an end. Prices of other metals, rubber, tin, etc., will on an average be enjoying boom conditions.

Foodgrains.—Jupiter's transit is most favourable to keep the prices of this section under control. Monsoon crops being quite good, paddy and rice prices will be under check, but wheat prices will be badly affected and they will be witnessing a rising trend in the latter part of the year. Proper distribution however will be maintained by the Government. Looking to the general economic conditions, and the dwindling resources of petty stockists and traders, foodgrain prices will be well under control during the whole year. Only in the latter part of the year that prices will

(Continued on page 178)

ASTROLOGICAL AFFILIATIONS OF RELIGION AND THEOLOGY

(Continued from page 96)

Critically expounding the relation between Language and Reality and the Meaning of Meaning (*i.e.*, words and their import) Vachaspati Misra, has written a remarkable classic known as *Tattvabindu*. In the opening benedictory stanza of the work, Vachaspati has offered salutations both to Siva and Vishnu. This has not been an arbitrary practice. Adequate and convincing reasons have been assigned by the commentator. There is a well-known dictum that if one wanted to be favoured with *knowledge*, he should offer worship to Siva. As the author was commencing a highly original work, he wanted perennial supply of intellectual inspiration for which he rightly prayed to Lord Siva. Works and treatises should last for ages together, and if these are short-lived their purpose would be defeated. So, as the author desired protection and perservation of his work for the benefit of several generations, he offered prayers to the Supreme Lord Vishnu.

There is no need further to elaborate the matter. In the light of the express, categorical and unequivocal indications thrown out by Vachaspati, it must be admitted that the two deities are different from one another. They are not identical with one another. That is why I have proceeded along a comparatively new line of approach and examined the question in the light of evidence furnished by astrology.

From the texts examined in the preceding paragraphs, it must be clear that planetary correlations and affiliations contain irrefutable and incontrovertible evidence to support the thesis of absolute difference between Siva and Vishnu. The *Sutras of Jaimini* have indicated planetary affiliations for proficiency in different sastras like *Tarka, Vedanta*, etc. The author has not given any planetary mappings to indicate devotion to the *Dvaitic* or *Advaitic* school. Possibly, here and there, indications may be lying hidden or submerged, but, they are not pronounced, as far as I can judge.

(10)

I should now place before your readers one or two practical suggestions for the reading of charts, with a view to ascertaining whether the individuals concerned will be devotees of Siva or Vishnu. As already observed by me, there are not many who follow the system of Jaimini in professional practice of astrology. Assuming there are a few, they would work out the details in reference to the *Atmakaraka* planet. Others, who may not be following the Jaiminian methodology may try to read the charts according to scheme of Varahamihira correlating planets and specific deities. Others may turn to the affiliations and correlation laid down by the author of *Daivajnyaabharana* if they are not satisfied with the methods of Jaimini and Varahamihira. The author of the *Aabharana* has unmistakably indicated a specific point of departure in reference to the 5th house.

I shall proceed a step further. Taking as it were a leaf out of the book *Aabharana*, I venture to suggest that students of research may substitute the fifth with another. The most natural and appropriate would be the Lagna or ascendant itself which will function and do duty for the *Atmakaraka* of Jaimini.

Thus, the nature of the lord of Lagna, the ruler of the navamsa of lagna, their positions and the aspects they receive would enable one to indicate the religious and theological preferences for this or that deity. Not merely the Lagna. The 3rd house also is determinant of the mind and mental functions. Whether the mind of a person is centred on god-head, or, is twisted and tortured by irreligion and godlessness would depend on consideration of the 3rd house. In addition, the 9th house also will have to be considered. It is usually connected with *Dharma*, and the theological categorization of the deity concerned would be guided by the light thrown from this house.

One may not complain that there are two many approaches. That cannot be helped. The Lagna, the *Atmakaraka*, their navamsas, 3rd 5th, and the 9th house will have to be studied, if the deity of one's choice is to be determined correctly. In some cases, the said approaches may not be sufficient

at all. They may be luke-warm and non-committal in responses. If so, the nature of the constellations occupied by the planets concerned, and their planetary rulers will have to be examined.

The constellation system has come to stay in predictive astrology and it has got to be pressed into service. When all is said and done, it is still a mystery, in what manner and by means of what calculations, the author of the *Dhruvanâdi* specifies point-blank that birth in particular *amsas* indicates loyalty to Siva and birth in some others means devotion to Vishnu. Only patient and systematic future research alone may throw some real illumination on the problem and its solution.

Safety does not seem to lie in dogged adherence to any one of the approaches mentioned. A judicious combination and averaging of the results seem the best able to yield correct indications.

(11)

I shall now briefly, attempt an answer to a question posed by me in a previous section. I asked—why has Jaimini correlated devotion to Siva with Sun the centre of the planetary system, and devotion to Vishnu with the weakest of the planets—Saturn? I reject the position that one deity should not be regarded superior and inferior and so on. (In the present contribution, the issues cannot be fully argued). In fact, in Hindu religio-theological history, some have taken Lord Siva to be supremest. Others have assigned absolute supremacy to Lord Vishnu—who is the Supreme Power indicated in the Vedanta Sutras as creator, preserver, destroyer, etc., of the entire universe of matter and spirit.

The central issue has been fully fought out. That was in the sixteenth century. Appayya Dikshita argued in support of supremacy of Siva. Vijayindra-tirtha maintained absolute supremacy of Vishnu. Their works and treatises are before the public. They may be studied, and your readers are at liberty to arrive at their own conclusions. My personal conviction and conclusion would be in favour of the absolute supremacy of Vishnu. I also, believe, that Varahamihira was an upholder of the supremacy of Vishnu—Lord Suryanarayana.

Students of Hindu theological literature would be aware of the view that Lord Siva is easily satisfied and would quickly confer favours on devotees. Lord Siva is described as *Kshipraprasada* (quickly-favouring).

Naturally, Jaimini correlated devotion to Siva with Sun whose light has been held to have the greatest velocity. On the contrary, it is very hard and difficult to please Lord Vishnu who has to be worshipped for long periods, in severest of austerities, and most rigorous of penances. Consequently, the slowest-moving planet would seem to have been correlated by Jaimini with devotion to Vishnu.

Other lines of reflection may suggest themselves to your readers, and I have put on record just the interpretation which seemed to be to be most logical and rationally sustainable. It may not be correct to seek to dismiss the question as minor one or argue that Jaimini himself had not intended any special meaningfulness to the correlations. On the contrary, Jaimini having been an orthodox sage should be deemed to have rendered his correlations deliberate and meaningful.

There is another view which deserves mention. Some would admit the existence of a fourth power over and above the trinity —Brahma, Siva and Vishnu. This fourth, (*Tureeya*) is not mentioned by astrologers, and there are no planetary indications for devotion to the *Tureeya*. In the history of human speculative system-building, two important lines of thought have been prevalent.

According to one school (*Advaita*) Man and God are understood to be one in essence and existence. Others believe (non-Advaitic systems) that Man and God are absolutely and radically different from one another. As noticed previously, Jaimini has mentioned correlations for proficiency in *Tarka* (logic), *Meemamsa* (Vedic exegetics), and other *sastras*. But, no special or specific correlation has been indicated for devotion to the doctrine of oneness (*Advaita*) or of difference between God and Man (*Dvaita*, etc.).

I am unable to arrive at any sort even of surmise or conjecture. Perhaps, Jaimini might have thought that the correlations mentioned for *Vedanta* would also function as indicators of different sub-divisions of *Vedanta*. If so, identification of the said correlations is yet to be attempted.

Jaimini has also, included in his reckoning, 5th house from the *Atmakaraka* and it is my personal view, (not yet statistically verified by means of an examination of different charts) that if the 5th house or ascendant be occupied by a malefic and a benefic both weakened, preference will be for the school of Oneness. If these planets be situated singly, preference may be for the school of Difference. The planets may be in actual occupation of the houses, or may even be strongly aspecting them. I hasten to submit that what I have here stated is purely tentative, and nothing more sub-

stantial than a mere surmise or conjecture.

I look forward to your better-informed readers shedding brighter light on the problem, if they are interested in it. Similarly, correlations for downright atheism and godlessness are not clear. There are no specific indications. There should be sufficient indications, somewhere, because, the problem is highly significant.

Whether the godlessness and atheistic attitudinizations of a person are merely academic or take shape in blasphemic course of actions like burning of the pictures of gods and breaking down of images of gods in iconoclastic madness and frenzy would depend on the *Karma* of the individuals concerned, for which they are bound to suffer in this as well as in another world. Planetary affiliations for such godlessness are not clear. Mere research and investigation are necessary before hidden truths are brought into light.

(12)

In bringing this discussion to a close, it would be necessary to lay emphasis on the following facts and considerations.

Schizophrenic split spiritual loyalities are unknown in this country known for saints and sages, their intellectual and moral integrity, being beyond question, or challenge even by the worst of enemies. Such split loyalties are glaring and staring one in the face in contemporary Indian politics.

As late Jinnah observed with biting sarcasm, some of the Indians who were sycophantically kneeling down before Europeans, one fine morning became suddenly transformed and metamorphosed into staunchest of patriots who as a result got highest and most lucrative of jobs. One may not coquette with one god now and another at a later time, in the spirit of time-serving politicians and job-hunters.

Siva and Vishnu are different from one another. Because, not merely philosophical and theological, but astrological testimony also is against their identity. Of the two deities, Vishnu is believed to be the supremest, though some would assign superiority to Siva. Astrological literature examined contains a number of planetary correlations or affiliations to mark off devotion to this or that deity of the Hindu pantheon.

Even today, there is a well-known practice in Malabar, that if you approach a Guru for initiation into Magic and Mantra the Guru, will never straightway agree to initiate strangers. The Guru will carefully examine the horoscope of the applicant concerned and try to assure himself about the sincerity and *bona fides* of the applicant. Then, he would examine the constellation of the applicant and decide which god or deity will be most suitable. Only, after all this preliminary examination and psychological testing will the Guru undertake to initiate the applicant.

I have known some gurus abruptly declining to initiate an applicant, simply because, his horoscope revealed to the mind of the guru athestic and irreligious inclinations and tendencies. No amount of entreaties and importunities were of any avail.

Thus, it is the *Karma* of individuals which would indicate devotion to a particular or specific god or goddess. In the theological system of Madhva several gods are admitted. Vishnu is the highest and greatest. To gain this or that worldly object such as wealth, office, women and forth, or to obtain success over others, and annoy enemies by resort to black magic, one may worship inferior deities. Such worship of inferior deities stands self-condemned.

It is terribly difficult to come into this world in human form. Human life should be turned to the highest advantage. The highest goal is liberation from birth-death-series. (*Moksha*). Lord Narayana is to be worshipped for obtaining the reward of final liberation.

Our preferences and predilections, secular partialities and religious leanings, theological prejudices, and even the secrets lying buried in the inner-most recesses of our hearts are all the outcome of *Karma* and find reflection in the horoscopes. That is the grand truth worth meditating and remembering. One can hoodwink the most vigilant police system, but, you cannot hoodwink *Karma*.

Theism and atheism, religion and irreligion, godwardness and godlessness have characteristic planetary affiliations some of which have been studied in the course of this contribution. A great deal of research remains yet to be accomplished, and, as a preliminary to such intensive investigations, astrological literature, particularly, in the shape of Nadis, in Tamil and Sanskrit, should be edited and published on up-to-date lines. Such publication will itself act as a vigorous and stinging stimulus to pursuit of research.

There is a dictum in Tamil to the effect that the king would immediately kill, *i.e.*, punish, but, God would punish in His own slow, leisurely, manner. (*Arasan-anru-kollum — Daivam-ninru-kollum*).

So, one should be careful not to provoke the wrath of gods and incur their displeasure. Gods should be devoutly worshipped according to our inclinations and tendencies. Astrological correlations and affiliations would show the right path and indicate the correct way.

How Is 1959 for You?

BY MIHIRA

MAJOR TRANSITS:—Throughout the year under review, Saturn remains in Sagittarius and Jupiter in Scorpio. At the opening of the year, Mars is in Aries and enters Taurus on 19th, moves into Gemini on March 26th, Cancer on May 17th, Leo on July 6th, Virgo on August 24th, Libra on October 9th, Scorpio on November 22nd, where he remains for the rest of the year. He is never retrograde during the whole year. Saturn becomes retrograde on April 16th and assumes forward motion on September 5th. Jupiter becomes retrograde on March 19th, comes to the very edge of Scorpio but assumes direct motion on July 20th. Rahu and Kethu continue their retrograde motion in Virgo and Pisces respectively. Regarding the other planets, they move too quickly to be noticed here in the annual survey. Their role is generally secondary but will be considered whenever they become important. Still, though they may augment or check some of the effects mentioned here, the general effects described here cannot but be prominent in the year's annual results. The predictions given here should be interpreted in the light of current directions operating in the horoscope.

1. Mesha (Aries):—*Mars in 1st to 8th; Rahu in 6th; Jupiter in 8th; Saturn in 9th; and Kethu in 12th.*

General.—Though ninth is not a favourable sign for Saturn, it is certainly less evil than eighth where he remained for the past two years and a half. But the change of Jupiter from the seventh to eighth is a change for the worse. The only relief from his evil can be experienced from about the beginning of October when his influence will come under check which will remain so practically till the end of the year. Saturn however would be under Vedha throughout the year and so need not be considered as a major evil influence for the entire year because of Jupiter in 8th. The best periods in the year will naturally be those during which Mars lends his weight on the favourable side by transitting auspicious signs which will be from about the end of March to the middle of May and again from about the fourth week of August to the end of the first week of October. It cannot be however gainsaid that the general levels of this year will be only below last year's and some general though slight worsening is to be expected as a matter of course but relief is very near as Jupiter will enter 9th on January 14th of 1960, and with it prosperous days will begin. Of the three stars of the sign, those born under Krittigai are likely to fare best, and those born under Aswini and Bharani come only next.

Health and Domestic.—Generally the transit influences even those that are in evil places throughout are not such as to affect the health directly and one can look forward to an almost trouble-free year in this respect. But health may suffer off and on indirectly as the result of long and wearisome journeys and fatigue and debility may be experienced that way. There is a liability to accidents during journeys that may also be had in mind. Some sorrows and unhappiness may arise as the result of death of a near relative or friend. Otherwise, the major part of the year will be passed peacefully and harmoniously at home and in social circles.

Finance and Speculation.—Though prospects as to finance are liable to vary considerably from month to month, it can be said generally that the position will not be quite satisfactory and great care should be exercised during the inauspicious months to avert losses that may otherwise happen. Nor much can be expected during the months when Mars is favourable as he would be under vedha then. This is not the year for financial ventures and enterprises, though not all months will be equally unfavourable and it may be possible to select propitious occasion for such, for which monthly forecasts should be looked to. But at no time, it can be said that conditions are good for speculation.

Real Property, Services, Profession, etc.—In matters concerning landlords and landholders, the year may not prove so unpropitious as in other spheres. It is not improbable that some investments made this year would prove to be profitable later on. It is even probable that some acquisitions will be thrust upon you in which case you should examine carefully and then only decide upon the course you are to take. Yield and rentals would prove to be fairly satisfactory almost throughout the year and your attempts to improve the yield also bid fair to be attended with success. The position with regard to the services is not at all unsatisfactory in general, though at times impediments and setbacks will have to be faced. Some attempts will be made by those against you to put you in a false position, attacking your honour, or efficiency or both. You will be successful in coming out unscathed but a lot of unpleasantness may arise. At no time during the year, profession or business will be brilliant though critical periods may have to be passed through. As in the case of the services, there will be only temporary and not great damage or setbacks need be feared.

Women only.—This year is not good for the fair sex as such. This is only so far as a general statement can be made. Since Venus and Mercury cannot be taken into account here, the monthly forecasts will have necessarily to be looked to for proper guidance but success in social enterprises or other activities pertaining to the fair sex cannot be expected as a rule. There is scope for some born under this sign to get married and settled in life under very good auspices.

2. Vrishabha (Taurus).—*Rahu in 5th; Jupiter in 7th; Saturn in 8th; Kethu in 11th; and Mars from 12th to 7th.*

General.—At first sight, Saturn in eighth appears to be the most powerful evil influence operating for this year. But really, nothing much need be feared from this transit as Saturn is throughout under check because of Jupiter in seventh. Jupiter a natural benefic is nearly at his very best in the seventh sign of Scorpio which is also a sign that is friendly to him and himself does not suffer check, except during brief intervals during the year. Kethu in eleventh is also a good and favourable influence. Thus on the whole the prospects are bright for the year. The best months will be October and November when both Venus and Mars will also transit favourable signs. Jupiter in seventh means auspicious celebrations in the house like marriage, birth of issue, acquisition of wealth, researches into sastras (sciences) wealth, good company, luxuries, conveyances, etc. Mars will not transit the eleventh sign during the year but Kethu in eleventh would give the results of Mars, such as good health, success in undertakings, acquisition of real property, happiness and pleasure. Of the three stars belonging to this sign, those born under Krittigai will fare than the other two for the greater part of the year; next

come those born under Mrigasira and those born under Rohini come last.

Health and Domestic.—The greatest adverse influence against health is Saturn but as he is under check, there will be only minimum disturbance and the greater part of the year will be spent in good health and spirits. Perhaps the worst month will be July and August when Mars transits 4th sign but even then he will be under check, so that the prospects for a healthy year appear bright. At any rate, it will be much better than last year. With Jupiter in seventh home and domestic circle will be happy and harmonious, with auspicious functions and celebrations. The disturbance of domestic peace will be minimum as in other matters.

Finance and Speculation.—With the perpetual aspect of Saturn on the second, financial matters may not shape out so well as may be otherwise expected and schemes and enterprises may not yield results proportionate to endeavour. Though the results may be below best, this year need not at all be considered as adverse to financial interests. Still variation of the conditions may vary greatly from month to month so that any general statement regarding finance may not be quite accurate. There is no reason to expect that speculation will fare any better during the year and if at all may be confined to special selected months only.

Real Property, Services, Profession, etc.-Landlords and landholders ought to fare better than last year in most respects. In their case also variation from month to month will be considerable and some months will prove very good and others may have to be considered as failures. Still so far as yield and rentals are concerned, they will prove satisfactory and mostly above average. You may launch into some activities for the promotion of yield and this you may do unexpectedly, *i.e.*, circumstances will so shape that you may begin them without any previous thought, still, the results will be good. October and November are the best months for the services this year when they are likely to get some promotion, preferments or other beneficial changes. During October especially Sun, Mars, Mercury and Venus will be in favourable signs in addition to Jupiter. The first three months of the year may prove somewhat trying even but March will prove quite good. Normal conditions are likely to prevail during the other months. This is a year in which profession and business will do well and remain on above average levels almost throughout.

Women only.—This is a bright year for the fair sex in general during which their hearts' desires in the matter of social and philanthropic activities will be accomplished to the full and their parties, social gatherings will be a brilliant success. Romance will enter the lives of the young and unattached and cupid will be busy tying knots. Not that care and caution can be thrown to the winds but cold judgment in the light of the advice of seniors and well-wishers will be necessary before committing oneself irrevocably.

3. Mithuna (Gemini).—*Rahu in 4th; Jupiter in 6th; Saturn in 7th; Kethu in 10th; and Mars from 11th to 6th.*

General.—Jupiter, Saturn and Rahu are in undoubtedly evil signs for the year. But Kethu in 10th is to be considered as good. One modifying feature however is that Jupiter in 6th though evil acts as a check on the greater evil influence of Saturn in 7th throughout the year. Mars is good for a longer period for this sign than for most other signs. Still as a general rule not much good happenings can be expected for the year with the major planets permanently located in evil signs. Fruitless enterprises, losses, heavy expenditure, quarrels and disputes with friends and relatives, domestic discord, anxieties and apprehensions, troublesome and unwelcome changes, ill-health, tedious journeys, deaths among relatives and family members or close friends are the probable events. The opening of the year and the closing of the year will be fairly good and the other months are likely to vary in the proportion of good and bad elements because of the transits of the minor planets. Of the three stars of this sign, those born under Mrigasira and Punarvasu will have a greatly reduced proportion of evil than those born under Ardra; in fact it may be just the reverse in their case.

Health and Domestic.—The pattern of health will vary almost from month to month so that it is difficult to formulate any general statement with regard to that it would cover the entire year. But it can be said there will be at no time any serious illness such as will make you take to bed for any considerable length of time. But in respect of home and domestic matters, there will be unpleasantness to some extent almost throughout, disputes with relatives and misunderstandings. These will be greater during the months of April to June. Tedious journeys, unwelcome changes and removals, etc., will have to be undergone.

Finance and Speculation.—The finances will undoubtedly suffer much less than may be expected. The opening and closing months of the year may even prove propitious. But it would be advisable not to risk too much in any single venture however promising and rosy the chances may appear. Favourable chances for sound investment may be taken advantage of as and when they arise. But to try to secure profits through speculation is to chase the will of the wisp. In the case of those whose sole business is speculation, it would probably be advantageous to be a stag throughout the year, completing each boul before proceeding to the next. Some new items of expenditure are liable to crop up during the year.

Real Property, Services, Profession, etc.—Matters pertaining to landlords and landholders will fare rather badly during the year. Losses in rentals, poor yield, damage to crops through pests, etc., are all likely to affect adversely and timely precautions taken against preventible damage will do much to avert loss. The month of September may be said to be specially evil and great care should be taken to avert disputes and quarrels, litigation and adopt peaceful methods as far as possible in the management of your affairs. Services are not likely to suffer much generally. Of course some months may prove exceptions. Here also the month may be September, as almost all planets excepting Venus will be transitting evil signs during this month. But much can be done by your own efforts to avert the evil as the preceding months of July and August will be highly favourable and by utilising the good influences and being extra careful throughout nothing need be feared. As regards profession and business, the whole year is generally favourable and bad months are the expections in their case.

Women only.—The year is not generally favourable to interests of the fair sex as such and April-May have to be mentioned as specially unfavourable. Of course, more details will be available in the reading for the month of April. Therefore their outside social activities shall be reduced to the very minimum and they should be contented with a more or less humdrum existence in which case the adverse transits will have very little play. Even within the domestic circle, care should be taken to avoid unnecessary fruition.

4. Kataka (Cancer).—*Rahu in 3rd; Jupiter in 5th; Saturn in 6th; Kethu in 9th; and Mars from 10th to 5th.*

General.—The two major planets Jupiter and Saturn are favourable for the entire year but Saturn is under

check throughout. Therefore not much can be expected from that planet. Still unchecked Jupiter in 5th is a powerful and favourable influence and can be relied upon to make the entire year above average and much better than the previous year. Rahu too is highly favourable and is unchecked. Auspicious functions and celebrations in the house, general increased prosperity, acquisition of luxuries and their enjoyment, success in enterprises, favours from rich and influential personages, good health and happiness, gain of wealth, defeat of rivals and enemies, etc., are the sort of good things to be expected for the year generally. As during February–March and September, Mars too will be transitting favourable signs, these will be the best months of the year. Of the three stars of the sign, Punarvasu, Pushya and Aslesha, the year will prove best for those born under the last asterism, next come those born under Punarvasu. Those born under Pushya will not be able to reap much benefit for the benefic influences though this may hold good for the entire year.

Health and Domestic.—Health will improve during the year and even prevailing existing ailments will greatly ameliorate or be even cured. Of course there may be temporary disturbances in months when the other planets transit evil signs, but, as a whole, the year will prove more healthy than otherwise. Conditions in the domestic sphere will also improve and there will be harmony in domestic and social surroundings. Your social standing will also be bettered and satisfaction alround.

Finance and Speculation.—The transit influences may not be reflected in financial matters with equal emphasis as in the other spheres of activity and some months may even prove difficult. As a general rule, however, above average levels will be maintained and it can be averred with some degree of certainty that new sources of income or wealth will be tapped. Though in the beginning, the returns may not be much, in course of time, there will be steady increase. Except during select months, even speculation would appear to be favoured especially for those to whom at birth Jupiter was exalted. But usual care and caution should be observed and the time for any major operations carefully selected.

Real Property, Services, Profession, etc.—The favourable transits in force cannot but improve the conditions for the landlords and landholders born under this sign but it has also to be said that not all their problems will be satisfactorily solved during the year and much confusion, uncertainty and difficult conditions may persist in some form or other about which the position will considerably vary from month to month and any important actions, enterprises or investments should be timed with due attention paid to the monthly forecasts in this respect. This should prove to be an ideal year for the services generally. As in most other matters, the months of February, March and September will prove to be the best for them also. With some efforts and diligence, you should be able to score a point or two over your rivals or co-workers in your field. This ought to prove an above average year for the profession and business also.

Women only.—A pleasant year is in prospect for the fair sex and many remarkable achievements are in store for the socially ambitious and enterprising of them. An ideal year for parties, excursions at homes, visits and fulfilment of their hearts' desires in all respects. Courtships and love affairs for the unattached will find their fulfilment in matrimony and family life. Romantic experiences are very probable as the year progresses, more so towards the close of the year.

5. Simha (Leo):—*Rahu in 2nd; Jupiter in 4th; Saturn in 5th; Kethu in 8th; and Mars from 9th to 4th.*

General.—The major planets do not promise much good for the year, as none of them are to be found in favourable signs for the entire year. April, May and September will be the months during which Mars at least will be in auspicious signs and these months will be the best in the month and conditions may prove tolerable, even satisfactory. In the predominance of evil elements, there is one mitigating feature, however and that is that Jupiter and Saturn though both of them in unfavourable signs act as check upon each other and thus cancels their evil mutually. But for this, the whole year may be rendered miserable. Mental confusion, anxieties and apprehensions, domestic upheavals and upsets, heavy expenditure, even losses, ill-health of family members, false implications, unsavoury associations, humiliation, accidents while travelling, are all the possible consequences of unchecked Jupiter and Saturn. Of the three asterisms covered by the sign, those born under Uttaraphalguna will fare best as the adverse transits will affect them least and the other two, namely those born under Makha and Poorvaphalguna will fare next best only.

Health and Domestic.—The transits, however bad, are not of a nature to seriously jeopardise the health of yourself at any rate though the same condition cannot be expected in the case of your family members. The health of some one of your children or wife may require considered and careful treatment during the year. Discord and disruption may be threatened in the domestic sphere but the influences are not too severe and no serious consequences need be feared.

Finance and Speculation.—Financial stress will be in evidence throughout the year. Of course, there will be considerable variation in the degree of stress from month to month. New expenditure items will create problems for which no ready solution will be at hand. There is a liability to incur heavy losses through deceit and confidence tricks which should be borne in mind. There will be a compelling tendency to resort to speculation to get over the financial hurdles but disappointment is sure and inescapable.

Real Property, Services, Profession, etc.—The major part of the year is unfavourable for landlords and landholders and it will be only at about the close of the year that there will be some unexpected developments that are likely to promise better conditions for the future at least but nothing may be accomplished within the year itself. But the year is not evil for all matters pertaining to real property. Good and profitable investments can be made and such opportunities as may arise in this respect may be utilised to one's advantage. The yield may be good and even above average in most respects. Of course some months may be good and some bad. The services will be heavily affected. One should be thankful if *status quo* is being maintained. Strict and rigid attention to duty and to routine only will be necessary and the mind should be watchful against untoward developments. Otherwise, charges, false implications may occur with such unwelcome happenings like disgrace or depromotion, especially when the current directions also happen to be bad. The business and profession may not suffer much and will escape the full effects of the evil transits. Some months may even be good.

Women only.—'What is sauce for the goose is sauce for the gander' would apply in this case also. This year generally promises little by way of good for the fair sex and they will do well to be prepared to spend a quiet year without outside or social activities. Of course not all the

months will be equally unfavourable and the good months will be noticed in the monthly forecasts which will be almost indispensable for this year.

6. Kanya (Virgo).—*Rahu in 1st; Jupiter in 3rd; Saturn in 4th; Kethu in 7th; and Mars from 8th to 3rd.*

General.—The principal planets whose influence count for most in transits in Hindu astrology namely Jupiter and Saturn are in unfavourable signs throughout the year. Mars another important planet is also evil for the greater part of the year. April to June and December are the only months in which he will transit good signs. These months will prove to be the best months of the year. There is some comfort from the fact however that Saturn will be under check for the entire year and his evil influence will not therefore manifest and in the months of October and November, Jupiter too will be under check. Failure in enterprises, deaths among friends and relatives, unwelcome changes, wearisome and useless journeys, loss of position or status, unhappiness, etc., are the principal evil effects to be caused by the malefic transits. Of course there may be some months in which the good transits may outnumber the adverse ones as in April but still because of the major planets, much headway cannot be made in any matter. Of the three asterisms covered by this sign, those born under Uttaraphalguna and Chitta will fare much better than those born under Hasta.

Health and Domestic.—Good health may not be maintained throughout the year but there is no reason to apprehend any serious illness because the transits though bad are not such as to cause disease. The troubles will be mostly minor and prompt treatment would set them right soon. But the mind will be anxious and ill at ease generally. There may be deaths among friends and relations contributing thereto. The domestic affairs too are liable to go wrong and unless handled with patience and tolerance may develop into untoward consequences. The transits however lack power to cause serious developments like separation, divorce, etc., but only unpleasantness.

Finance and Speculation.—Beyond a general observation that finances will be in bad shape for the year in question, no more specific statements can be made as conditions will vary greatly from month to month. Of course, big financial ventures or enterprises should not be taken on hand during the year except during select months when conditions are said to be exceptionally favourable in the monthly forecasts. The financial level will be less at the end of the year than at the beginning. At no time there is support for speculative activities.

Real Property, Services, Profession, etc.—Landlords and landholders are in for a year of sufferings and tribulations and the months of April, May and September may be specially bad. Yield and rentals will be poor and decline further during the year. A lot of anxieties and apprehensions will have to be gone through especially by those born under the asterism of Hasta with Lagna also Virgo. So this is not a favourable year for investments, enterprises, mining interests and any activity connected directly or indirectly with the earth or its produce. The services should be thankful if *status quo* is being maintained. They will do well to build up efficiency, acquire the qualifications for future preferments and put in a year of solid industry and not attempt and expect any favourable changes or elevation as that will be best way to side-track the evil influences and utilise them to one's advantage. Undoubtedly this is a bad year for the profession and business also. This year, as in the case of the services should be utilised for stabilisation rather than expansion.

Women only.—This year is not so bad generally for the fair sex as may be expected from the foregoing sketch of the year's results. However it would be useless to build up big expectations either. Normal activities, social, philanthropic, etc., may be conducted and surely matrimony awaits for many of those born under this Rasi, entailing residence in environments far away from the birth place, to reach which place even voyage may be necessary.

7. Thula (Libra).—*Jupiter in 2nd; Saturn in 3rd; Kethu in 6th; Mars from 7th to 2nd; and Rahu in 12th.*

General.—Jupiter and Saturn the two major planets whose influence outweighs the effects of all other transits because of their importance in transits are throughout in favourable signs but on this account great hopes cannot be built upon in any sphere of activity as it so happens that both these planets are affected by vedha, Rahu being in twelfth all the time. Roughly from about the middle of May to the end of August, Mars would be in favourable signs and so this period should prove to be the best part of the year generally. From the middle of July to end of August, Sun, Venus and Mercury would be additionally favourable. Generally, happiness, influx of wealth, success over rivals, auspicious celebrations, new status, increased prosperity, luxuries and enjoyments, etc., should figure among the year's happenings. But actually the prospects are somewhat limited because both Jupiter and Saturn are under check. Of the three asterisms of this sign, those born under Chitta and Visakha will reap better results and suffer less than those born under Swati.

Health and Domestic.—Fairly good health will be enjoyed for the current year throughout, with but occasional lapses during the months when evil transits predominate. No other general statement can be made with regard to this matter. This year is very good for domestic and social activities and harmony will prevail, new friends among men of power and influence and welcome visits from relatives, friends, etc., will enliven the home. Auspicious events and celebrations are also very probable and the year will not end without some such event.

Finance and Speculation.—A distinct high level mark in respect of finance will be reached this year as neither the previous year nor the succeeding one have the same benefic influences so far as transit is concerned. The benefits are likely to be exceptional for those born with Jupiter exalted in their horoscopes. The above observations do not hold for any time during the whole year and during months when other transit influences are adverse, even losses may occur. But speculation has not got much support.

Real Property, Services, Profession, etc.—Landholders and landlords have no cause for jubilance. This year though the major influences are good, even exceptional, April and October may prove to be the worst months for them when even major disturbances may cause damage to yield, rentals, etc. Even capital depreciation and waste will have to be apprehended. But at the same time it has to be stated that the situation will never be out of bound and anyway no serious damage will actually supervene though much is threatened. This is a fairly good year for the services and new status and positions, promotion, beneficial changes, etc, are all due. To some, unexpected preferments are in the offing, may be abroad, especially if current directions also favour. There is however a probability of your incurring the displeasure of those above you during select months (*vide* monthly) which should be sedulously avoided. In the case of the profession and business also high levels will be touched and maintained over considerable periods of time.

Women only.—This will be a normal year for the fair sex and their affairs will moderately prosper. That is so far as a general statement can be made covering the entire year, but the year will not pass without some remarkable happenings, romantic experiences, social hits, philanthropic contribution, etc. Even those confined usually to home and domestic surroundings only will have some outings, excursions and some new experiences and interests ; but generally there will be no marked deviation for normality.

8. Vrischika (Scorpio).—*Jupiter in 1st; Saturn in 2nd; Kethu in 5th; Mars from 6th to 1st; and Rahu in 11th.*

General.—Neither Jupiter nor Saturn transit favourable signs at any time during the year but Rahu is throughout good as he is in the 11th. Mars will be favourable during the months July to September (both inclusive). Therefore these months should prove to be better months than others. But during August-September, Sun too being good, these months should prove to be the best for the year. Loss of wealth, heavy expenditure, obstacles and dealings in all matters, troubles through friends and relatives, also through rivals and enemies, tedious and wearisome journeys, ill-health, domestic worries, financial stress, loss of comforts, loss of position, deaths among friends and relatives are the kind of unwelcome happenings listed for the unfavourable transits of the year. Still there will be some relief because of the presence of Rahu in 11th for which gain of property, happiness, increase of wealth, name and fame, honour and position are all due. Of the three asterisms of the sign those born under Jyeshta will fare best and suffer least and the case of those born under Anuradha will be worst while those born under Visakha will fare much better than Anuradha.

Health and Domestic.—General debility and ill-health off and on will be present during the year ; but no serious illness is threatened at any time and with moderate care, ill-health may be warded off actually. There is a chance of tedious journeys adding to your general weakness and journeys should be avoided as far as possible. The domestic affairs for the year too will be such as to cause gloom, anxieties and sorrows. There may occur a death or two among your relatives and there may be much anxiety over the health of one of your children.

Finance and Speculation.—There is not much prospect of your finances registering any improvement during the year generally though some select months may chance to be favourable. On the other hand, losses may arise, mostly by deception or victimisation by unscrupulous persons who may try to exploit you. Though wealth may increase during some months, they are liable to be lost later, so that the condition at the end of the year will be worse than in the beginning. The contributing causes for this may be increased heavy expenditure or unsound speculation.

Real Property, Services, Profession, etc.—This cannot be said to be a good year for landlords and landholders generally and April to June may be stated to be specially evil and injurious to their interests. This year is not also propitious for investments in real property or reformatory changes. But it will pay to consolidate your position against future onslaughts, such as by getting rid of properties whose yield may not be satisfactory or such as are difficult to manage because of distance or other causes. Though the year as a whole is not good for those in the services, there will be some exceptional months when the available favourable transits can be utilised to promote your interests such as August-September. Some of the unemployed are likely to get good positions during such months. It would be advantageous to have your qualifications perfected during this year by completing tests, etc. So that preferments may become possible during next year which will be certainly more favourable. The movements and progress of business and profession will be erratic throughout the year with no scope for any large returns or income and also not much of deterioration or losses either.

Women only.—This will be a normal year for the fair sex in all respects, the good as well as bad influences leave them and their affairs alone and almost untouched during the entire period. Of course, there may be some differences from month to month but differences will be negligible and insignificant. There is some scope for acquisition and enjoyment of a few luxuries which are dear to the feminine heart and mind.

9. Dhanus (Sagittarius).—*Saturn in 1st; Kethu in 4th; Mars in 5th to 12th; Rahu in 10th; and Jupiter in 12th.*

General.—Though Saturn transits Janma and is unchecked for the greater part of the year, Jupiter in twelfth has got good and bad points as well and cannot be regarded as wholly good or evil. The best months will be January middle to the end of March and again October and November. But this is only a general observation. This is the central period of Sadesathi and therefore this year cannot but prove trying in many respects and for which there is no counteracting influence to combat or moderate. Distant and tiresome journeys and all inconveniences attendant thereupon, troubles caused by rivals and enemies, separation from relatives, losses, failures, impediments and obstructions in all matters, ill-health, etc. are the sort of undesirable results to be apprehended for the year. Of the three stars of the sign, those born under Uttarashada will fare best and the other two come only next.

Health and Domestic.—With Saturn in Janma, health cannot but suffer. Jupiter in 12th also is liable to cause ill-health as well as accidents. As it is the nature of Jupiter to cause illnesses through excesses in eating, etc., it is the nature of Saturn to cause troubles through privation. Therefore the golden mean in diet and general habits will be the best way to preserve health this year. Of course, you should guard against accidents during journeys especially by refraining from risky or rash actions, *e.g.*, getting abroad and getting down from moving vehicles. All sorts of troubles and difficulties will arise in domestic and social circles which you should try to combat by calm and level-headed judgment and actions.

Finance and Speculation.—Heavy expenditure, extravagant actions, etc., will cause a state of continued financial stress. Though lord of 2nd is in 1st, lord of 1st is in 12th. Therefore there is no chance of accumulation of wealth, not that there will be no earnings but they will go into a bottomless purse. Some months may not prove at all bad and these should be utilised wisely to cover up your deficits. The year as a whole is bad for speculation and it is even difficult to visualise some months that can be at all favourable.

Real Property, Services, Profession, etc.—There are some features that will prevent the adverse transits from having their full impact upon the affairs connected with landlords and landholders, though conditions will be bad enough for nearly the entire year. No investments made during the month will flourish, nor any undertakings or enterprises designed to improve your lot in any manner or enhance the yield. This year should be quietly devoted to routine matters and for lying low. The services may be said to be somewhat favourable and may not prove so bad as one may

be led to apprehend from the state of the transits. During some months, special care will be necessary to avert things that may take a wrong trend and for this guidance should be sought in the monthly forecasts. Business and profession will be dull generally throughout the year with occasional spurts of activity in the months that are favourable otherwise.

Women only.—This year in general will be characterised by mental and emotional conflicts so far as the fair sex is concerned and they will find it difficult to come to a decision in matters affecting their interests as such. From the unattached and young to the seasoned matron, this will be so according to the matters concerning each and it will be advisable to postpone decision in important matters which will bear postponement from a matrimonial commitment to the conduct of an entertainment, party, etc.

10. Makara (Capricorn). — *Kethu in 3rd; Mars from 4th to 11th; Rahu in 9th; Jupiter in 11th; and Saturn in 12th.*

General.—Two planets are in favourable signs for the entire year, Kethu and Jupiter. This year will be practically the first year of Sadesathi but will not mark any untoward events because of that as Saturn is under check throughout and therefore ineffective for mischief. Otherwise, he may even render the excellent position of Jupiter from doing any good or neutralise its good effects. As it is Jupiter will have unrestricted scope to improve the lot of the native alround, being himself unchecked for the greater part of the year. Good health, acquisition and enjoyment of articles of luxury, auspicious events and celebrations, new position, promotion, gains, investments, domestic happiness, philanthropic actions, happiness, success in undertakings, etc., are the principal good things that may result from the favourable transits. April and May as well as the last quarter will be specially good because Mars too will be transitting favourable signs then. Of the stars of this sign, those born under Uttarashada and Dhanishta will fare generally much better than those born under Sravana.

Health and Domestic,—Good health will be rather the rule than the exception this year, though the onset of Sadesathi is usually attended with disturbances in health. Still during some months when Mars and other planets are unfavourable, some ill-health may supervene but these will neither be severe nor long-lasting. Domestically this month will be one of harmony, and happiness with pleasant functions in your home and also those of your near relatives. Many domestic problems will find their happy solution.

Finance and Speculation.—Conflicting influences are present in the matter of finance but on the whole the general trend will be more favourable than otherwise. Some losses during unfavourable months appear inevitable though and it will be wise to refrain from financial enterprises in these months, such as June, July, October, etc. During July-August especially Jupiter's good influence will be under check. The year is not encouraging for speculative activities, except during some favourable months which will be indicated in the monthly readings.

Real Property, Services, Profession, etc.—Both good and bad are in store for landlords and landholders. Confusion is indicated with regard to matters that vitally affect their interests and they will not be able to visualise what course is good for them and adopt the same. Yield and rentals too may suffer somewhat and dealings with tenants, agents, co-owners, etc., may become difficult causing some unpleasantness. But in all this, matters will never go to excess. At the same time, it is probable that you may be able to make some good investments too. The services will generally do well and more so during some months. During the closing part of the year, it may be advantageous to tackle some matters boldly and press for your claim, being recognised as otherwise you may not get what is due to you by oversight or negligence of those placed above you. But you should be careful not to act rashly. This year is an ordinarily good one for the profession and the business and above average levels will be touched during select months.

Women only.—Good and happy relations wiih those around you and with the opposite sex can be envisaged for women in general this year. The unexpected element will take a hand in some matter or other but the results will not be unpleasant or derogatory to your interests. Many of those born under this Rasi, more especially those born under Uttarashada or Dhanishta will find themselves happily united in wedlock before the year is out.

11. Kumbha (Aquarius).—*Kethu in 2nd; Mars from 3rd to 10th; Rahu in 8th; Jupiter in 10th; and Saturn in 11th.*

General.—Of the two major planets Jupiter and Saturn, the former is unfavourable and the latter very good for the whole year. So the results will vary almost from month to month according to the transits of other planets emphasize the one element or other, *e.g.*, during June-July almost all planets will be in unfavourable signs but in December almost all the planets except of course Jupiter will be in good and auspicious signs. But, on the whole, the year will be tolerable. There will be no great disappointments nor successes. There will be some gain of properties, happiness, auspicious, celebrations, increase of wealth, good name and popularity, satisfactory solution of some of your outstanding problems be it in any sphere, are probable. On the other hand, unwelcome changes, troubles in respect of your holdings, quarrels, displeasure, health troubles and some losses, etc., are to be expected at some time or other. Of the three asterisms of the sign, those born under Dhanishta and Purvabhadra will fare better than those born under Satabhisha.

Health and Domestic.—The year will be generally free from disorders and disturbances in health and even such minor ailments as may appear now and then will quickly yield to treatment. But the mind will not be free of anxieties and apprehensions on some account or other, major causes being children and their health and affairs. Otherwise the year will prove to be more or less normal in matters pertaining to the domestic and social circles.

Finance and Speculation.—Though many and sundry problems will arise owing to increased expenditure and even some inevitable losses, the year assessed financially as a whole will be tolerable. There will be no acute stresses or financial facilities. There is no support in the transit influences to support big financial enterprises or ventures but there is positive discouragement for speculative activities.

Real Property, Services, Profession, etc.—Though the landlords and landholders are liable to be hit hard this year at the same time there is also a protecting influence which will see that matters are not carried too far. It is even probable that fresh acquisitions and additions will be made during the year. There will be also good and bad months. There may not be at any time complaints regarding yield as this is likely to be plentiful. But troubles may arise in asserting your legitimate rights and having your grievances in general remedied. The services will have to be on the lookout to see that their position or status does not suffer deterioration through their own careless or negligent conduct. Unless they are scrupulously careful in all

that they do, the location of scandal or inefficiency or what not may touch them to their detriment and they may incur the displeasure of their superiors. If they are negligent or careless, their claims may be bye-passed. It is a critical year for them, though they are protected by a favourable influence throughout. The profession and business will do well generally but in their case too there will be good and bad months.

Women only.—For matters pertaining to the fair sex as such, the year cannot be said to be propitious in general. No doubt some months like June are not at all bad but the period during which conditions will be trying is much greater. For those in the services, what is said for servicemen previously will of course apply. Greater care will be required in the case of the unattached and those who have to manage their household even in day-to-day matters as well as in dealings with the opposite sex.

12. Meena (Pisces).—*Kethu in 1st; Mars from 2nd to 9th; Rahu in 7th; Jupiter in 9th; and Saturn in 10th.*

General.—Jupiter in ninth for the entire year is a fortunate circumstance. Saturn in tenth is not an altogether evil influence in itself as a malefic in an Upachaya place is strong generally and capable of producing good effects. But this position of Saturn acts as a check on the good influence of Jupiter and so cripples his power for good. Therefore though the general nature can be said to be only of a mixed character, the transits of the minor planets as also that of Mars and Sun will be responsible for making any month good or bad or indifferent, *e.g.*, during August-September Sun, Mercury and Venus as also Jupiter will be transitting good signs including Saturn and during the latter part of June almost all the planets will be in unfavourable signs. During the favourable month, general success, gains, prosperity, auspicious events and celebrations, domestic harmony and happiness, increased returns in all activities like agriculture, general prosperity, etc., will obtain. Of the three stars of this sign, those born under Poorvabhadra and Revati will fare much better than those born under Uttarabhadrapada.

Health and Domestic.—There is nothing to apprehend in the matter of health generally this year except such occasional and minor disturbances as may be caused by the transits of Sun and Mars during select months; as a whole, a healthy year. Home and domestic surroundings, etc., will also benefit from the rays of Jupiter and auspicious events and celebrations may take place. Many outstanding domestic problems will be solved satisfactorily in the course of the year.

Finance and Speculation.—It is difficult to make a general statement that would cover the whole of the calendar year because of the widely shifting fortunes probable during the year. But it can be said that the best part of the year will be from the middle of January to the end of March as also the months of July and August. The rest of the year will not be of an encouraging nature for financial ventures and enterprises, but the greater part will be normal. During the favourable months, speculation too may prove profitable but of course great care will be necessary.

Real Property, Services, Profession, etc.—The real property interests will, as a rule, suffer during the year as the year cannot be said to be conducive to the landlords and landholders. It is very probable that their rights will be invaded, and their profits cut into in more ways than one. There may also occur diminution and loss of yield through various causes. But there is no way to militate against fresh acquisitions or additions to your holdings which may take place in the normal course. The services will neither gain much nor suffer much this year. There may be some changes in the nature of the work turned out of them, *e.g.*, from one department to another. Though this involves no change of status, this change will render future preferments easier and in some cases also possible. The unemployed born under this Rasi will have chances for getting into something or other which may ultimately prove their permanent job. The profession and business while subject to ups and downs as in any normal year will never touch below average levels and will generally do well.

Women only.—There will be no adverse interference by the transits upon the affairs that normally pertain to the fair sex so far as they have not got to depend on others for their fruition or fulfilment, in which case only disappointments are probable. But where they themselves can do things with the resources at their disposal normally, such activities will be crowned with success. They will not find the opposite sex especially as 'dependable' as usual and guide their actions accordingly.

GENERAL COMMERCIAL INDICATIONS FOR 1959

(Continued from page 169)

start really soaring up and if this science is going to prove a good guide, Government should see that strict possible measures are taken at a proper stage to avoid abnormal rise in prices of foodgrains by the ending part of the year 1959 and beginning of 1960.

Stocks and Shares.—Two divergent forces appear to be working here. They are Saturn and Rahu square aspects. While one denotes troubles in labour sphere and general economic development, the other denotes good export demand and economic development of industries—specially steel plants, engineering undertakings, etc. It is said that this section denotes the real status of the country. I do not agree with this, since the masses are hardly interested in this section. For the real progress of the country, it is necessary that with the development of agriculture, the agriculturists and labour are trained to invest their savings in the industrial field. It will only then that this section will represent really the economic conditions of the country. This step is yet to come. Till then this section represents only a selected few. Labour troubles are bound to hamper the progress of the plan projects and hit industries; on the other side export spheres will be open to the industries. There will be virtually a fight between bulls and bears during the whole year.

Periods of rise:—

5th January to 28th January 1959.

14th February to 23rd March 1959.

12th June to 29th July 1959.

3rd October to 28th October 1959.

19th November till 31st Dec. 1959.

It is hoped that the general idea given above will be of help to traders and readers as also to students of the science.

FOR JANUARY 1959

[This study is not intended as a tip for investors to follow. The writers have arrived at certain conclusions regarding Cotton, Commodities, etc., etc., *mainly based on planetary influences.* Those who act on this information will be doing so at their own risk.—*Ed., A.M.].*

BY D. R. MUNSIF, B.Sc. (Econ.), (London), B.A. (Hons.) (Bombay),
5/1, Russel Street, Royal Court, Calcutta–16.

Economic Section

WE are at present the witnesses of a fairly determined policy of the Government to keep the note issue under control, and together with the restraint on the printing press are enforced certain measures of direct and indirect credit control so that the cost of living does not keep up ; but we find that inspite of strong efforts of the Government, the prices jump up. Many people think that inflation is merely a consequence of an increase in the note circulation which in fact is not so.

There are other hidden elements in the economic life of a society which lead to the rise in prices. When you have a scarcity of a certain commodity or a group of commodities, the price of that or those takes an upward leap. Such a scarcity is today created by the Government's import policy. No doubt it is meant to conserve foreign exchange but the indirect result is the rise in prices. This shows the contradictions in our economy.

Marx was not a very good historian but he was indeed a brilliant analyst of historical facts. He said that every society carried within itself the seeds of its own destruction. Thus his famous dictum was "What is will be what is not". Our capitalist economy, whenever it is regulated and controlled as it is today, is thus impregnated with the seeds of destruction.

Let us carry this analysis a little further in the monetary field. The readers must have gathered from the press reports that all the bankers have combined together not to bid for the community's savings or should I say the society's savings by not allowing a higher rate on deposits, savings or fixed deposits It is to the eternal scheme of our Government which prides on improving the lot of common people' that such a decision is supported under the aegis of the Reserve Bank of India. Thus, our middle classes are deprived of the fruits of their good habits of thrift and economy.

Today, our middle classes are crushed between the upper stone of the exploiting capitalist class, and the nether stone of the working class. The upper classes in one way or another, by legal or illegal means, maintain their supremacy. They run the press and create an impression as if they have become the victims of an oppressive policy. But in fact, they have today the most unlimited opportunities of creating an empire. They have been exploiting not merely the society but even the Government. When a new investment is made in any field of industry, they get in the initial year a deduction in income-tax from the profits upto the first 25% of the value of machinery. If this is not a golden harvest, one would like to know where these can be found.

What have these capitalist classes done—manipulating accounts, controlling prices, indulging in smuggling and exchanging frauds and organising pressure groups to mislead public opinion. They, in the initial period of India's independence, sacrificed the Princes who had at least a certain tradition behind them; next they sacrificed the landed oligarchy to postpone the day of curtailment in their power and panopy, and now they are relentlessly adopting the steps that the monopolists do; and the combination of bankers is a step in that direction.

What is required is therefore an organisation of middle classes to set down certain standards, and to channel the savings of the country into various fields of production in the same way as the various *Nidhis* in the South have done in the field of housing and estate-development. Further, the Government has an excellent chance today to encourage the formation of co-operative societies, and for the middle classes to insist on such encouragement to prevent the exploitation of their class.

Our middle classes can easily form a few societies for the specific purpose of financing trade and industry, and their record in this direction will be a very admirable one because they would know by reputation the local men, and the credit-worthiness of different individuals. Moreover, they will be all secured loans, with the reservation of certain margins. Thus in no case there will be a destruction of savings as is the result today owing to the actions of dishonest bankers.

But this restriction on the interest rate suits our Government of the day because it requires cheaper loans. These cheap loans are lavishly and recklessly spent so that the cost of living goes on rising without a significant pause. Further what the public does not know, is that the Government loans become a base for further credit, for any purchaser of a loan can approach a bank and borrow 90% of the amount of the market price. Our Reserve Bank under the guidance and direction of the Finance Department, imposes many controls on the banks restraining credit facilities on certain commodities, but there are no restraints with regard to the amounts or regard to margins for the banks to make advances against the security of Government loans. If our middle classes were to unite together and demand such a restriction and were successful in obtaining it, the cost of living will fall by at least 20 points within a very short time of a few weeks.

At this stage, it is pertinent to think if the Government has any intention of repaying these loans in real money, that is silver or gold. If that be so, are there any attempts today for the *amortisation* of the public debt. The one element of inflation in our economy is the suspicion and fear in the public mind of a continual increase in the amount of our public debt, with the inevitable consequence of depreciation of our rupee in terms of commodities. This element of uncertainty is reflected in the rates of the shares of many of the public companies on stock exchanges standing as high as capitalised at the rate of a mere 4½% only. Nowhere in the world, where capital is plentier per head than in India, is there such a condition obtainable today. And even in the United States, the Government is getting seriously concerned with the high level of stock-exchange values with the result

that the Government is attempting to restrain the increase in the amount of public debt; and behind this stock-exchange inflation is the fear of a depreciating dollar as an insurance against which, people run to buy stocks. Since last one year, our stock-exchanges have been betraying the same trend under conditions similar to those in the United States but of a great intensity.

The basic safeguard in a capitalist society is competition but in every field of industrial sector, the competitive element is eradicated and a monopolist element is being introduced. On the grounds of useless duplication, a system of license is being introduced to start even a new industry. If an individual or a group of individuals can command the lobby, he comes to be in a position to exploit the whole society. Our Government has prohibited the imports of condensed milk and today our native manufacturers are charging nearly twice as much for the same quantity of condensed milk. Such examples can be multiplied in the field of provisions, drugs and even in industrial fields. On every front our middle classes are mulcted. History has established it as a fact, that whenever middle classes are destroyed, it has sowed the seeds of the destruction of that society.

Astrological Section

Before starting this astrological section, let me request the readers to refer to September and October 1958 issues of THE ASTROLOGICAL MAGAZINE. The stock-exchange forecasts have proved true to the letter. The readers, I hope, after the good rise in speculative values, should be in a good frame of mind for the Diwali. Similarly for jute, cotton and oilseeds, the traders must have had the good luck to cash in profits. The readers must have experienced the Hessians standing higher than Rs. 43—indeed a new high as was forecast together with the jute shares at rates higher than any that were during the last two years.

I wish the readers a happy Diwali and a prosperous New Year; for this is written on the eve of Diwali but the issue will be in the hands of readers just before the setting in of 1959 which may well prove to be the year of Destiny for the world.

It has been usual for me to discuss the Full Moon and New Moon maps to discern the stock-exchange trends but this time before I discuss them, I wish to point to the dynamic map for the time of Sun's entry into Capricorn. Many astrologers consider this map to be more vital than the solar ingress map into Aries. For Bengal, Moon and Mars are on the cusp of the 1st house in square to Uranus and opposed to Jupiter. Both Sun and Saturn are in the 8th house with Venus posited in the same sector Thus both the lights are afflicted and very badly configurated. It will do very well for our Government to be watchful on our eastern frontier. Further Mars becomes direct just before the Sun enters Capricorn and thus marks the time to be important and momentous. The direct march of Mars breeds the military mentality of war. This position particularly afflicts the genitured of Texmaco, Indian Aluminium Co., and Indian Cable Co., which are quoted and dealt on the Calcutta stock-exchange.

In a similarly more dangerous manner is the map for the same time drawn for the middle-east sector particularly the Syrian-Israeli border, with Uranus in the 7th house, Mars and Moon within four degrees of the cusp of the 4th house and Saturn and Sun in the 12th house In one of the past issues, I have already pointed out that a danger of hostilities in the middle-east is not conducive to the rise of stock markets. In normal times, it is far easier to discover the trends of values from the cycles which have been discussed elsewhere in this issue but today the astrologer has to draw not one or two or even half-a-dozen but literally more than a dozen maps every month to find if the political trends as betrayed by the planets for the neighouring countries are dangerous. In December, I warned the readers that the political trends are very dangerous for the middle-east and the direct march of Mars in the earthly sign of Taurus in which it is debilitated will fan the flames of hatred. Its affliction to the Moon and Saturn's inaffliction to the Sun encourage the same trend. I have not discussed the Full Moon map of 26th December because it falls just three days after the Capricorn ingress map, to which is given a greater importance.

I now discuss the New Moon map of January 9th for N.-East India. Mars is again in the 2nd house with Jupiter opposed to it from the 8th. The lights are situated in the 10th sector with Uranus and Pluto in the 5th. Saturn is in the 9th house sesqui-quadrate to Uranus. Once again, you will hear of a crisis in India's foreign trade.

The sesqui-quadrate is considered to be a very powerful discordant aspect but in this case owing to the degree positions involved, I think that it is going to be a constructive phase. It grinds the market for a natural rebound. I therefore advise the readers to accumulate their purchases during the New Moon to Full Moon period. The people with such courage will reap the harvest from January 24th onwards.

The map for the Full Moon of January 24th is a good deal better. With both Mars and Jupiter in angles, the bullish fervour will be very much in evidence. Pluto in the 10th house generally well aspected and particularly with Saturn in the 2nd house marks out a strident progress in the values, though the sesqui-quadrate of Uranus with Saturn will give a few bearish jerks particularly in textile and plantation industries. But the big engineering industries will thrive. I am marking with red ink for the next two or three months the shares of the Indian Cable Co. to rise.

The readers should note that the above-mentioned remarks about bullishness are good after the second week of January and for the cautious and less venturesome after the third week of January.

Commodities.–The important astrological phenomena for the purpose are the vedhas between Budha and Kethu, and Budha and Rahu from the 5th to 15th, between Mars and Venus from 13th to 20th, and between Sun and Venus from 24th to end of the month and also between Sun and Mars.

Next Rahu ends the sojourn into Chitra during the month to return to its eighteen years later and enters Hasta. Jupiter also leaves Visakha on 16th January and enters Anuradha. As soon as the latter occurs, for a period of at least a fortnight, rice, grams, and some pulses of lower kinds will fall. Further from the 8th of January, Sani will pass through Gemini navamsa and Kethu also will be doing likewise during latter part of the month.

Cotton.—The values will begin to fall during the second week. The fall should end on the 14th thereafter the fluctuations will be two-sided movements. From the beginning of the fourth week, a positive bullish trend will make its appearance. But this is a jobbers' market and not for the stay-at-home speculators because the movements are narrow ones.

Jute.—In this commodity, the bearish jerk will be visibly felt from the very beginning of the month upto the end of the second week. Thereafter Saturn will pull up the prices—this will be particularly so from the 24th of the month.

Gold and Silver.—In these commodities, the bear pressure will be felt the most from the 5th of the month. This will be so particularly for silver following upon the bad reports about the weather, resulting in the spoiling of crops. But later Saturn's sojourn into Gemini navamsa will generate bullish fervour and two-sided movements will emerge. The grip of bulls will be tight round the necks of bears from the end of the third week.

Oilseeds. — There are very small bearish fluctuations during the first week of January. Later on the prices will rise to some small extent but the passage of Mars through Krittika will positively lift the prices up. The latter fortnight will be a marked one for the rise in these commodities including coconuts.

Kariana Goods.—Spices and dry fruits will without exception pick up from the 10th onwards.

So also will be the case with metals like copper, iron and brass.

BY A. P. SATHE
Dr. Deshmukh Building,
Dr. Deshmukh Lane, Bombay-4

I give below the Amavasya chart of 9th January 1959 and Solar Ingress (Makara Sankranti) chart of 14th January :

Kethu	Mars		
Lagna	9-1-1959		
Venus			
Sun Moon Mercury Saturn	Jupiter		Rahu

Kethu	Mars		
Moon	14-1-1959		
Venus Sun			
Saturn Mercury	Jupiter		Rahu

Amavasya Chart.–This chart appears to be very bullish and it may be stated here that for stocks and shares, for general foreign trade the month from 9th January to 7th February 1959 specially upto 3rd February 1959 will show good progress; and consequently prices of stocks and shares will witness good boom conditions.

Solar Ingress Chart.–Upto 14th January 1959 indications available in the previous Sankranti chart need consideration. While in this article discussions on this chart could not be given, I may only state that for the first 15 days of this month, the period coming under Dhanu Sankranti will not prove to be bearish, but rather dull conditions shall prevail ; and with Sun's entry into Uttarashada on 10th January, commodity prices also will start rapid rising trend. The indications obtainable in the Makara Sankranti chart also favour bullishness in the initial stages upto 3rd February, and during this whole month, it will be worthwhile following teji in every mandi reaction in commodities as well.

Instead of discussing the various planetary transits, I give below my opinion on the various principal forward markets :—

Cotton and Allied Products.—Punarvasu remains under vedha from Saturn. Martian transit from Aries —specially from Nakshatra Krittika from 14th January favours rising spree. Mercury also in the latter part transits Uttarashada, which favours rise in values of cotton. Venus transit except the period 10th to 20th is also indicative of bullish conditions. While the nakshatra transit of Venus between 10th to 20th is unfavourable for rise in values of cotton, Vedhas by Mars from 14th will not allow Venusian transit to have a say and prices of this commodity during the whole month will rise substantially. Anuradha transit of Jupiter will give one jerk in the market between 16th and 19th, but this should be taken advantage of to buy. 1st teji, 2nd to 6th bearish, 7th to 10th steady, 11th to 13th bearish, 14th and 15th teji, 16th to 20th bothways, 21st till end teji.

Oilseeds.—Dhanu Moola transit of Saturn does not favour rise in values. But other transits of Rahu, and Mars and Mercury favour bullish conditions. Temporary boomlet will be witnessed, specially with Jupiter's entry in Anuradha in this section. Teji be followed in the second fortnight. 1st teji, 2nd to 8th mandi, 9th to 11th teji, 12th to 16th mandi, 17th till 27th teji, 28th to 31st steady.

Metal and Bullions.– Solar transit from Uttarashada from 10th, Jupiter's transit from Visakha upto 16th, Martian movement from Krittika are all teji factors in this section. Moola transit of Saturn also favours rise in values of metals like tin, copper, lead and zinc. Follow teji in this section. 1st and 2nd teji, 3rd to 6th mandi, 7th to 11th teji, 12th to 14th steady, 15th to 18th mandi, 19th to 31st teji.

Foodgrains.—Jupiter's entry into Anuradha favours drop in values of foodgrains, and one drop could be expected between 16th and 21st. Distribution will be properly arranged. Government will remain alert and will not allow rise in prices of essentialities.

Sugar and Gud.—Prices of these will witness rise. While sugar will not be so much in demad, gud prices will abnormally rise specially in the latter half of the month. Follow teji in every mandi reaction.

Stocks and Shares.—This section will still enjoy bullish conditions and prices will rise substantially. 1st teji, 2nd to 5th mandi, 6th to 9th bothways, 10th rise, 11th to 14th steady, 15th to 28th good rise.

In general follow teji during the whole month under review in almost all sections of the forward and ready markets.

A. C. PERCY
Botawala Building, 3rd Floor,
257, Thakurdwar Road, Bombay-2

The major planet Jupiter after his sojourn of more than a year in Libra enters Scorpio on 28th December 1958.

During January 1959, several parallel and square aspects take place, which would turn the markets erratically and would likely baffle the operators to the utmost and the fluctuations would be wide and heavy. We therefore advise you to take care of yourself and please see that you are not trapped in the market. Those who would exceed their limits, are likely to come to serious troubles and might lose heavily.

Square aspects between Sun-Rahu and Sun-Kethu on 9-1-1959 ; Venus-Neptune on 12-1-1959 ; Mercury-Rahu on 22-1-1959 ; Mars-Venus on 26-1-1959; Sun-Neptune on 27-1-1959; and Jupiter-Venus will affect all markets heavily and will lower down the tendency of share market and in some scrips of higher values will suffer most.

Parallel aspects take place between Venus-Saturn on 2nd ; Mercury-Venus on 4th ; Mercury-Saturn and also Sun-Mercury on 6th ; Mars-Venus on

13th; Jupiter-Venus on 17th; Sun-Mars on 20th; Venus-Herschel on 21st; Sun-Jupiter on 26th; and Mercury-Saturn on 28th.

Shadashtaka aspects occurring between Mars-Mercury on 1st; Mars-Rahu on 4th; Sun-Herschel on 6th; Mercury-Herschel on 21st will prove a further set-back to the market.

Trine aspects take place between Sun-Mars on the 10th; Venus-Rahu on the 21st and Mars-Mercury on the 27th and will serve as supporters to the market. Further, there will be conjunction between Mercury and Saturn on 11th.

The force of evil aspects is stronger than the benefic aspects and hence, during the 2nd half, there will be heavy pressure of selling.

Tata Ordinary.—Probably the market may show improvement for about 8-10 days but thereafter, gradually the market will experience a sharp fall, and hence, please try to get out of teji business from about 10th or so. During December, in the lower rates, you may try to pick up and in the rising trend in the beginning of this month, you must book your profit without fail.

Indian Iron will follow the line of Tata Ordinary but there will be much resistance in this scrip at lower rates and hence, you should not go short at lower rates.

Century and Bombay Dying.—During December 1958, yon can buy these scrips, and dispose of the same doubly in January as stated above. Century can be bought up from Rs. 430.33 about keeping space to buy at more lower rate. Similarly, you can pick up *Bombay Burma* if the prices are lower.

Cotton.—On 11th October, the prices touched highest to Rs. 638 from the lowest price of Rs. 617 touched in the beginning and from 13-10-58, the prices began falling sharply and came down to Rs. 593.50 officially on 1-11-58 and unofficially to Rs. 591 from which level, the prices have improved and are hovering at Rs. 602 and some further improvement is possible but a seller at about Rs. 625 roughly will be benefitted, of course keeping some space to sell further at a rise.

Seeds.—Castorseeds rule weak presently. On 30-9-58, the prices touched to Rs. 144 and improved to Rs. 151 and groundnuts to Rs. 158 and improved to Rs. 167.50 and again the prices have fallen to Rs. 141 and Rs. 161. There is very little demand in export for castor oil and so far, the export quota for groundnuts oil is not announced by the Govt., and hence, Singdana also rule somewhat weak but maintaining the level of price at Rs. 159/160. We think, it would be advisable to buy castor-seeds if the prices come down to about Rs. 133/34 and at the same time, groundnuts at that time.

Gold and Silver.—The prices have fluctuated exactly as advised by us. In the first place, silver touched to Rs. 189-14-0 and gold to Rs. 110 in October and came down to Rs. 187-8-0 and Rs. 109 respectively and again the prices improved for silver to Rs. 190-12-0 and for gold to Rs. 111-8-0 and again the prices came down to Rs. 187-10-0 and 110-4-0 and you have to follow Teji line in such a set-back as has been experienced above, little less or more from the highest prices that may touch. Remain a buyer.

Scorpio-Jupiter will help the bullion prices to improve well, and you are advised to operate within your limit.

Commodities Market.—It would be advisable to buy important items in chemicals, dyes and colours, spices, camphor powder and menthal, etc.

Rayon Yarns after an initial fall will stabilise from December, and hence, please be a buyer at lower rates.

INTERPRETATION OF A PLANET'S INFLUENCE

(*Continued from page 20*)

When a square is formed from trines or angular houses and when these two planets acquire benefic vargas, even the square appears to be a very favourable aspect.

The unfavourable aspect between Mars and Mercury is capable of bringing about a nervous or mental breakdown, or at least a carping and satirical intellect. In pronouncing an aspect to be unfavourable, one should carefully consider the sign and house-positions and the ownerships of these planets. Czar Nicholas II has the 10th house Mercury squaring Mars, Moon and Rahu in the Ascendant Leo. In Goering's chart we find the 2nd house Mercury squaring Mars of the 5th house; and the effect is greatly reduced here by Mars conjunction Jupiter with opposition Saturn.

A good deal of uneasy speculation hovers round the aspects between Mars and Venus. Curiously enough, the earth is situated in between these two planets; and the association of these two appears to present an ardently passionate temperament. By itself a conjunction or an aspect between these two does not indicate anything immoral. At best it reveals a taste for the fine arts. The conjunction can result in a bereavement, say a separation from or the death of a child. The individual becomes sensitive, easily irritable, sensuous and coarse; and the energy of Mars tends to be softened. Gandhi has this conjunction in the ascendant. A woman who had a similar placing is separated from her husband for no fault of hers since 1954. We do not know what happened to Bulganin, but he had this position in the 7th, while Hitler had it in the 8th.

A favourable aspect between Mars and Venus brings forth warmth and enthusiasm into one's behaviour towards all. If the two are well placed, a very happy family life is indicated. An unfavourable aspect makes one more sensitive and miserable; there is an absence of adjustability resulting in quarrels and absence of peace in the home. One becomes whimsical, and at times cynical. Disraeli's Mars has a square aspect on Venus in Scorpio, while Milton's Venus is sextile to Mars. In Stalin's chart, there is an exact opposition. All these have tended to be unfavourable.

A conjunction of Mars and Jupiter greatly increases the dormant energy of the person. There is a desire for enjoyment, and yet one is highly active, courageous and argumentative.

(*Continued on page 184*)

JANUARY 1959

BY MIHIRA

[The following forecasts based on Janma Rasi are general and as such those having favourable aspects according to present Dasa and Bhukthi, will have favourable results from the indications made below; while those having adverse aspects according to current directions will experience these predictions to a less proportion. The predictions given below are based not upon conjecture, but upon a clear interpretation of the movements or transits of planets. If you do not know your Janma Rasi write to Mihira, C/o THE ASTROLOGICAL MAGAZINE enclosing a stamped self-addressed envelope.—*Ed., A.M.*].

MAJOR TRANSITS:—Sun transits Sagittarius till 12th, then enters Capricorn. Mercury remains in Scorpio only till 4th, then enters and transits Sagittarius till 25th on which date he enters Capricorn. Venus enters Aquarius from Capricorn on 24th. Mars changes for his long stay in Aries to Taurus on 19th. Jupiter and Saturn continue in Scorpio and Sagittarius respectively. Rahu and Kethu retrograde in Virgo and Pisces.

1. Mesha (Aries):—*Mars in 1st and 2nd; Rahu in 6th; Jupiter in 8th; Mercury in 8th, 9th and 10th; Sun in 9th and 10th; Saturn in 9th; Venus in 10th and 11th; and Kethu in 12th.*

General.—There is no transit influence that is good for the entire month and even the few good transits are good only for fractional parts of the month. Sun is good for the second half and luckily unchecked so long. Mercury and Venus the only other planets who are favourable at all are good for the last week only and of these, Mercury is under check. So it can be easily seen how inadequate the month is in the matter of transits for beneficial effects. Mercury, Venus and Saturn are the only planets who are under check so long as they are evil. Mars and Jupiter are both evil and free of vedha throughout. The second half can be expected to be somewhat better than the first. Mental depression and despondency, enmities and quarrels, even humiliation, domestic troubles, obstacles in all matters, ill-health, domestic troubles, false changes, troublesome journeys, dishonour, general unhappiness are among the undesirable happenings probable for the month. During the second half however, some successes, accomplishment of your desires, gains, cessation of disputes and quarrels, help from friends, some luxuries and enjoyments are likely. Among the three asterisms of this sign, those born under Krittika will fare best and suffer least while the unfavourable elements are likely to dominate in the case of those born under the other two asterisms, Aswini and Bharani.

Health and Domestic.—Liability to ailments of blood, bile and heat is increased during this month in the first half. Later wind troubles may manifest. People subject habitually to bilious disorders should be careful in their diet and general habits throughout the month. There is also a liability to accidents which should not be forgotten. No peace can be expected in the domestic sphere at least in the first half but as the concerned planets Sun and Saturn are under check, normal conditions will be restored soon and harmony will prevail during the second half.

Finance and Speculation.—No transit influence is favourable for the first half. Heavy expenditure, losses, misunderstandings and quarrels arising through money are very probable and great care and forbearance will be necessary on your part to prevent the evils from proceeding too far. All this for the first half only. Though these troubles may subsist during second half also, they will be greatly reduced and some gains will accrue to offset the enormously increased expenditure. Extravagance as also speculation in any form or shape should be avoided

Real Property, Services, Profession, etc.—Though the transits are highly discouraging generally, landlords and landholders may not suffer much even during the first half. Yield and rentals should prove satisfactory. It is also probable that the question pertaining to investment in real property will arise and to decide whether to go in for them or not may prove a difficult matter. But in this matter, no definite guidance can be given from the transit influences alone as they are equivocal. Better such matters, if considerable, be postponed to better times. Both good and bad will be experienced for the services. The first half is very discouraging for their interests and anything may happen, humiliation, loss of status, unfounded charges, displeasure of superiors, etc.,' but these are not inevitable and with previous care and caution can be avoided as the planets responsible therefor are under check. The profession and business will experience struggles during first half and fare better during the second.

Women only.—The first half has been mentioned as being evil generally. It will be worse in matters that pertain to the fair sex as such. They should not travel alone and in unfrequented places and be careful in handling utensils, cooking ranges and kitchen gadgets generally. Giving of parties or engaging in social entertainments, etc., should be avoided as far as possible. All this for the first half especially. Some freedom is allowable during second though still great care will be needed.

Fortunate Dates:—Children's affairs and prospects—6 and 10; Speculation and investments—6, 14 and 28; Long journeys—6, 14, 24 and 28; Real property—9 and 28; Educational and academical—9 and 24; Partnership and opposite sex—10 and 21; Professional and business—6, 14 and 28; Political and Government affairs—14; Interviews and tests—6 and 24; Insurance and estate of deceased—9 and 10; Personal and domestic—9, 10 and 28.

Critical Dates:—Children's affairs and prospects—4 and 31; Speculation and investment—4, 11, 18 and 31; Long journeys—4; Real property—18 and 31; Educational and academical—11, 22 and 31; Partnership and opposite sex—11 and 26; Professional and business—4, 11 and 22; Interviews and tests—11 and 31; Personal and domestic—26; Surety—18.

Chandrashtama about the noon of 5th till night of 7th.

2. Vrishabha (Taurus).—*Rahu in 5th; Jupiter in 7th; Mercury in 7th, 8th and 9th; Sun in 8th and 9th; Saturn in 8th; Venus in 9th and 10th; Kethu in 11th; and Mars in 12th and 1st.*

General.—Jupiter is favourable and unchecked for the entire month and is a powerful influence for good. But

he is the only planet to be in a good sign throughout. Mercury is good for the greater part of the month and also unchecked. Venus too is favourable till 25th but is under check also till then. Sun, Mars and Saturn are evil for the whole month, a formidable array indeed if unchecked; but fortunately Sun and Saturn are under vedha and Mars also for the greater part of the month. This indeed should provide considerable relief as the mischief of unchecked Saturn in 8th is incalculable and has become even

(*Continued on next page*)

INTERPRETATION OF A PLANET'S INFLUENCE

(*Continued from page 182*)

Ambitious and powerful one will be; and still he will be outspoken. There is such a conjunction in Goering's chart, though unfortunately it appears in the 6th house. But in Shelley's chart, there is an exact conjunction in a good house. The finest example is provided by the twelfth chart [12]. In the 2nd house owned by Mars, this conjunction takes place. Starting with humble beginnings the person rose to a supreme position of power and honour in academic circles and in the political sphere. He is one of the foremost philosophers of this century.

A favourable aspect between Mars and Jupiter accentuates the characteristics of the conjunction with an addition of gaiety. The individual appears to be the child of fortune in that many opportunities arise for him to reveal his energy and enthusiasm. In other words, Mars provides the energy for the realisation of the characteristics revealed by Jupiter. One is apt to function with the zeal of a reformer. The tenth chart presents a favourable trine. The third chart shows the sextile. The thirteenth chart [13] reveals that opposition between Mars and Jupiter is not favourable; and here it involves the 2nd and the 8th houses, though both are exalted. A similar unfavourable opposition appears in Gandhiji's nativity. Such unfavourable aspects tend to extremist positions; and the overstrain to which such individuals are put is fraught with grave results. The opposition brings forth an emotionalistic approach to religious problems.

The conjunction of Mars with Saturn does not appear to be quite good. The planet of energy cannot easily adjust with the planet of limitation. The ordering of force and initiative and the super-induction of caution and patience do not enable Mars to function properly. Sometimes, if there is no alleviating influence, the conjunction does result in physical suffering, worry, agony, loss and disappointment. The 9th chart presents this unique conjunction in the 8th house; and it is unrelieved. He was tortured and shot dead like a dog, even though he was a powerful dictator till then.

The favourable aspect between Mars and Saturn presents the same features as the conjunction; but here there are tolerable chances for a harmonious adjustment. Usually those who take up pioneering work and struggle arduously, are found to have these favourable aspects. They do not care for personal comfort One example is provided by Churchill's chart where Mars is in trine; and this is spoilt slightly because of the 12th house where Mars is situated. The trine in Lenin's chart is redeemed a little inspite of the sixth Mars because this sixth happens to be Aries. The third and the seventh charts present a very good sextile.

The unfavourable aspect indicates a hard struggle, physical overstrain, and sternness. It is often revealed in the form of self-discipline and austerity. This is particularly true of opposition. It appears in the tenth chart, and in Guru Nanak's nativity. The unfavourable aspect tends to produce short periods of irritability, sudden enthusiasm, and restless energy. A fire accident cannot be ruled out. It is after a long struggle that the individual achieves success.

The association of Mars with Rahu does not always tend to be bad. In a majority of the cases this conjunction appears to be highly favourable for altruistic endeavours and for great intellectual output. The person becomes an embodiment of a perpetually dynamic energy; and the results of this energy in the hands of others tend to lead to dangerous consequences. The seventh chart is a case in point. The sixth presents the conjunction in the 9th house.

After having analysed the nature of the planet in the light of these considerations, we have to determine the time-factor. Here two ways are open to us. One method is to rely on the Dasa system. In this we have to consider the results that Mars gives; and if an individual is not going to have the period of Mars, then we have to find the planets in whose sub-periods the effects of Mars will be felt. This method can be worked with success in close co-operation with the method of progressing every cusp and every planet by about fifty-nine minutes per year. This aspect of the problem will be considered at a later date.

[12] Born on 5-9-1888 with Kethu's period for one year. Ascdt. in Libra; Mars 4° and Jupiter 8° in Scorpio; Kethu 6° in Capricorn; Saturn 23° in Cancer; Moon 12° and Sun 22° in Leo; Mercury 2° and Venus 5° in Virgo.

[13] Born on 29-2-1896 with Venus period for 27 months. Ascdt. 10° in Gemini; Jupiter 8° in Cancer; Kethu 1° and Moon 25° in Leo; Saturn 27° in Libra; Mars 5°, Venus 15° and Mercury 22° in Capricorn; and Sun 18° in Aquarius.

proverbial. Jupiter in 7th is a dependable factor in the month's results, especially as he is unchecked. Though effects can be only mixed, conditions would prove generally tolerable. Of the three stars of this sign, those born under Krittigai and Mrigasira will reap well the benefits of the transits and suffer much less from the malefics. The worst sufferers will be among those born under Rohini.

Health and Domestic.—No serious ill-health need be feared because of the transitting influences. But all the same it is better to watch the blood pressure every week throughout the month and take steps to counteract even slight rises that may be noticed. As regards domestic matters, Jupiter and Saturn pull contrarywise and as Jupiter is the more powerful one for this month, nothing but petty bickerings and minor troubles may be present and even these will disappear during the second half.

Finance and Speculation.—Though usual gains will accure from normal and accustomed channels, the month is unsatisfatory generally in respect of finance. Heavy expenditure, losses, extravagance, etc., will swallow up all your available resources and the income will be totally inadequate to your needs. It may also be easily gathered that the month will not favour financial enterprises, new ventures, etc. The first half is especially bad. Speculation at any time during the month will result in loss.

Real Property, Services, Profession, etc.—Neither the good nor the bad transits favour or depress the prospects for the landholders and landlords during the month. Conditions will be normal and so far as routine matters go, there will be no disturbance. But it is a different matter if routine is departed from and new innovations or enterprises are contemplated or even investments in real property. Considerable scrutiny and forethought should be exercised before any action of some magnitude is undertaken. The first half is bad for the services and the second half good. There will be room for much apprehensions regarding what may happen as regards your position, status or at least doubts as to whether you will be getting what is due to you but these will be removed during the second half. You may not be in the good books of your superiors during the first half. In this a welcome chance may be expected during the second. There is nothing special that has to be noticed in connection with the profession or business which will continue on average levels. In this too second half may prove better.

Women only.—This is a generally good month for the fair sex, especially the latter half. During the first half some care should be necessary in the matter of fixing marital engagements and avoid haste and precipitancy and better postponed to the second half. Otherwise the month is good for parties, journeys, romance and love affairs and dealings with opposite sex in general, also literary and artistic activities, mystical or musical hits and experiences.

Fortunate Dates:—Children's affairs and prospects—6; Speculation and investment—6, 9, 28 and 29; Long journeys—9, 14, 17, 28 and 29; Real property—6, 14, 21, 24, 27 and 28; Educational and academical—6, 14, 17, 21, 24, 27, 28 and 29; Partnership and opposite sex—9, 10 and 28; Professional and business—10, 21, 24, 27 and 28; Political and Government affairs—17; Interviews and tests—6, 17, 21, 24, 17, 28 and 29; Personal and domestic—10, 21, 24 and 27.

Critical Dates:—Courtship and love affairs—19 and 26; Speculation and investment—4, 12, 18 and 31; Long journeys—4, 22 and 26; Real property—26; Educational and academical—4, 26 and 31; Partnership and opposite sex—11, 12, 18, 19 and 26; Professional and business—11 and 22; Interviews and tests—4, 22, 26 and 31; Insurance and estate of deceased—12, 18 and 19; Personal and domestic—11; and Surety—31.

Chandrashtama from night of 7th to sunset of 9th.

3. Mithuna (Gemini).—*Rahu in 4th; Jupiter in 6th; Mercury in 6th, 7th and 8th; Sun in 7th and 8th; Saturn in 7th; Venus in 8th and 9th; Kethu in 10th; and Mars in 11th and 12th.*

General.—Venus is the only planet in a favourable sign for the entire month. Mars is good before change of sign that is till 19th. Mercury is good only at the beginning and closing week. This exhausts the auspicious transits for the month. Sun, Jupiter and Saturn are throughout evil but it is satisfactory to note that Sun and Saturn are also under vedha throughout. Among the malefic transits only Jupiter for whole month and Mars after change of sign are free of check. Therefore in a month of unfavourable transits, tolerable conditions prevail and results nondescript either for good or bad. Gain of money, land, house property, domestic happiness, sartorial luxuries, increased fame and prosperity, auspicious events and celebrations, success in undertakings, etc., are all due for the good transits. Health troubles, tedious and wearisome journeys, mental depression, varied anxieties, bad associations and extravagance in expenditure, etc., are due for the evil transits of the month. Of the asterisms of the sign, those born under Mrigasira and Punarvasu will generally fare much better than those born under Ardra.

Health and Domestic.—Domestic troubles, urinary difficulties to those who are prone to such ailments. rectal troubles such as haemorrhage, dysentery, etc., fever for chronic sufferers only, are the probable forms of suffering in health. So considerable attention should be paid to general routine and habits and food and drink. Blood pressure should be watched during the second half especially. Quarrels with friends and relations, wife and children may make domestic and social contacts unpleasant and the mind will be oppressed with anxiety, depression and apprehension.

Finance and Speculation.— There may not be much room for complaint in respect of finance so far as routine matters are concerned. Increased influx will be offset by extra expenditure and during the second half it is even probable that there will be pressure for money which cannot be met with the available resources. Still somehow matters will be squared up without room for much anxiety. Speculative activities are not favoured at any time.

Real Property, Services, Profession, etc.—Matters which concern landlords and landholders will be at their worst during this month. Their affairs are liable to go wrong at every step. Yield and rentals will fall below expectations due to various causes. Difficulties, quarrels, etc., are likely to arise in your relationship with tenants, agents, co-owners, etc., and even litigation threatened. But it is not wise to resort to this during this month in which almost all planets are in evil signs. The first half of the month however is not adverse to adding to your holdings if favourable opportunities present themselves. The month cannot be said to be positively bad for the services. There may arise some misunderstandings or some friction with co-workers or even superiors. But on the whole tolerable conditions will prevail. With industry and judicious management, it is even possible to lay the foundation for the future. Generally, the month is good for the business and the profession and they will flourish on above average levels throughout.

Women only.—This month is not altogether favourable for the fair sex in the sense that their hopes and desires may not be realised as per their

expectations and fall short of the month. 'Cooling off' of the other party may perhaps express the condition best. But there will be no impediment to all normal activities. Care with regard to persons who want to befriend them will be necessary, as it is likely that some undesirable elements may seek to do so about the middle of the second week or so.

Fortunate Dates:—Children's affairs and prospects—10, 17 and 21; Speculation and investment—6, 9, 10, 14, 21, 24, 28 and 29; Long journeys—6, 9, 14 and 29; Real property—6 and 28; Educational and academical—6, 24 and 28; Partnership and opposite sex—14, 17, 24 and 29; Professional and business—9, 10, 14, 17 and 28; Political and Government affairs—14; Interviews and tests—6, 24 and 29; Insurance and estate of deceased—17; Personal and domestic—6 and 24.

Critical Dates:—Courtship and love affairs—18 and 26; Speculation and investment—4, 11, 12, 18, 19, 22 and 26; Long journeys—4, 11, 18 and 31; Educational and academical—31; Partnership and opposite sex—12, 18 and 26; Professional and business—4, 11, 12, 19 and 26; Political and Government affairs—19; Interviews and tests—11, 19, 26 and 31; Insurance and estate of deceased—4 and 22; Personal and domestic—31; Surety—4, 11, 18, 19, 22 and 31.

Chandrashtama from sunset of 9th till about the midnight of 11th.

4. **Kataka (Cancer)**:—*Rahu in 3rd; Jupiter in 5th; Mercury in 5th, 6th and 7th; Sun in 6th and 7th; Saturn in 6th; Venus in 7th and 8th; Kethu in 9th; and Mars in 10th and 11th.*

General.—Mars, Jupiter and Saturn are three major planets whose influence counts for most in transits are all favourable for the entire month. Saturn is under check throughout, Mars after change of sign, *i.e.*, after 19th, but Jupiter is entirely free and this is highly satisfactory. Mercury is favourable for the greater part of the month but is also under check. Sun is good for the first half and unchecked. Venus is good after change of sign that is for the last week but comes under check at the same time. The favourable transits are clearly in the majority as there is no transit that is evil for the entire month. Still the general effects will be only of a mixed nature as some of the good influences are under vedha. Good health, success over rivals and enemies, happiness, various gains, acquisition and enjoyment of articles of luxury, auspicious events and celebrations, popularity, association with influential and wealthy people, and increased prosperity generally are the good things to be expected. Evils through women, bad associations and quarrels, temptations, obstacles, tedious journeys, etc., may result from the unfavourable transits. Of the three stars, those born under Punarvasu and Aslesha will fare better than those born under Pushya.

Health and Domestic.—Good health for the month will be the general rule. Minor troubles may occur during the second half, such as those relating to stomach, rectum and anus, or an attack of fever. But people who are not constitutionally prone to above, need have no apprehension at all and even those who are predisposed, can get away by taking ordinary precautions. Conditions at home and in social circles will be happy and harmonious and calculated to increase your name, fame and popularity.

Finance and Speculation.—Unchecked Jupiter in 5th is good for money and speculation and success in financial enterprises and practically there is no other influence to obstruct or spoil this. Therefore you can go ahead with your plans, financial enterprises provided you are not over-confident or reckless, in which case no influence can protect you at any time. In speculation, of course, you should take care not to overstep your limits or wade beyond your depth.

Real Property, Services, Profession, etc.—The first half of the month cannot be said to be favourable for landlords and landholders. Yield and rentals may be affected adversely. Quarrels may develop and litigation threatened. In all such cases, you should be beware of taking short cuts to solutions as they will always prove disadvantageous in the long run. In hard cases it may become necessary to even part with a portion of your holdings. The second half is certainly more favourable and if the first half is successfully weathered, you may be sure no further cause for anxiety will arise afresh. The whole month especially the first half is very good for the services. Advancement of your basical position or standing, popularity with co-workers and superiors and other favourable changes are due. The profession and business will do well above average levels and the month also favours new enterprises and ventures, expansion of existing facilities, acquiring new clientele, etc.

Women only.—This month is marked out for success in all activities that are dear to the heart of the fair sex generally and they can go ahead with the sure knowledge that whatever they attempt this month will come out successful and bring them credit, popularity and pleasure. Their estimation will rise in the eyes of others. Some of the fair sex who are married are likely to become mothers and some of the unattached may become engaged and get married.

Fortunate Dates:—Children's affairs and prospects—6, 9, 10, 17 and 27; Speculation and investment—6, 9, 10, 14, 17, 21, 27 and 29; Long journeys—6, 14, 21, 27, 28 and 29; Partnership and opposite sex—17 and 21; Professional and business—6, 9, 10, 14, 17, 27, 28 and 29; Political and Government affairs—9, 10, 14 and 29; Interviews and tests—27; Insurance and estate of deceased—6 and 17; Personal and domestic—9, 10, 14, 21 and 28; Courtship and love affairs—21.

Critical Dates:—Courtship and love affairs—11 and 18; Children's affairs and prospects—11 and 19; Speculation and investment—4, 11, 26 and 31; Long journeys—11, 12 and 31; Real property—12 and 26; Educational and academical—4, 12 and 31; Partnership and opposite sex—11, 18 and 22; Professional and business—11, 19 and 26; Political and Government affairs—19 and 26; Interviews and tests—4, 12 and 31; Insurance and estate of deceased—4, 11, 18 and 22; Personal and domestic—19 and 22; and Surety—4.

Chandrashtama from about midnight of 11th to sunset of 14th.

5. **Simha (Leo)**.—*Rahu in 2nd; Jupiter in 4th; Mercury in 4th, 5th and 6th; Sun in 5th and 6th; Saturn in 5th; Venus in 6th and 7th; Kethu in 8th; and Mars in 9th and 10th.*

General.—No planet is in a favourable sign for the entire month. Sun is good for the second half only and Mars only after change of sign on 19th. Mercury is good only at the beginning of the month and for the closing week. This exhausts the auspicious transits for the month. Venus, Jupiter and Saturn are evil throughout. Of these, Jupiter and Saturn are also under check throughout, thus their evil is neutralised to a great extent. Venus who is not powerful in transit is under check only for the last week. Sun and Mars are under check so long as they are evil. Thus though evil transits predominate, the mischief they are actually capable of doing is very limited for this month, because of vedha and the second half will be much better than the first as at least three planets transit favourable signs. General success, peace of mind, good health, gains, good associations and friends, popularity are the sort of things to be expected. Of the three stars of sign, those born under Makha

and Uttaraphalguna will fare better than those born under Purvaphalguna and those born under Uttaraphalguna will do better than those born under Makha.

Health and Domestic.—The first half may witness health troubles for yourself and your children and the sufferings will be more mental than physical, such as will be the case if the children are taken ill. The second half can be expected to be free of such troubles and anxieties. General debility and weakness arising from troublesome and protracted journeys will be also a feature of the month. Liability to accidents should not be overlooked. While there may be some bickerings and misunderstandings within the domestic sphere, these are likely to be set right during the second.

Finance and Speculation:—The month as a whole is generally unfavourable for finance and there is a liability to losses through your own actions as well as through theft and undesirable friends during the first half or about the middle of the month. The second half will be somewhat better and with some caution, tact and industry on your part, it will be possible to net some gains. But no part of the month can be said to favour speculative activities on the stock exchange or the race course.

Real Property, Services, Profession, etc.—Landlords and landholders will suffer this month as much from their own actions as from outside sources over which they have no control. They may be led into ill-advised investments by unscrupulous persons who seek their own gains. Litigation regarding your incorporeal rights will end unfavourably. Even in your routine matters, there may arise setbacks because of your own impulsiveness or uncontrolled enthusiasm. Avoid new enterprises, innovations and experiments. The beginning of the month is unpropitious for the services but as the month advances more and more favourable influences are released until conditions are quite good at the close. In the first half, you may incur the displeasure from Government or from those placed above you and therefore it is important that you should so conduct yourself so as not to give room for such things. The same observations so far as may be apply also to the business and profession and the month will end much better than at the beginning.

Women only.—There is nothing in the influences of the month that is derogatory to the normal activities in which the female sex are generally engaged as such. But the more ambitious and socially advanced among them will do well to restrict their extra activities for the second half and even then, the month is not good for outdoor activities, excursions, picnics, etc. The month, as a whole, is not conducive for courtships, love affairs, etc.

Fortunate Dates:—Children's affairs and prospects—14 and 24; Speculation and investment—6, 9, 14, 21, 24, 27 and 28; Long journeys—9, 10 and 17; Real property—9, 10, 27 and 28; Educational and academical—9, 10 and 27; Partnership and opposite sex—6 and 17; Professional and business—17, 21 and 27; Political and Government affairs—29; Interviews and tests—9 and 27; Insurance and estate of deceased—14, 17 and 24; Personal and domestic—6, 10, 14 and 29; Courtship and love affairs—21 and 29.

Critical Dates:—Courtship and love affairs—19 and 31; Children's affairs and prospects—19 and 31; Speculation and investment—4, 19 and 31; Long journeys 11, 12, 18 and 26; Real property—11 and 26; Educational and academical—26; Parnership and opposite sex—11, 18, and 31; Professional and business—11, 12, 18, 19, 22 and 26; Interviews and tests—11 and 26; Insurance and estate of deceased—4 and 11; Personal and domestic—4; and Surety—31.

Chandrashtama from sunrise of 14th till sunset of 16th.

6. Kanya (Virgo):—*Rahu in 1st; Jupiter in 3rd; Mercury in 3rd, 4th and 5th; Sun in 4th and 5th; Saturn in 4th: Venus in 5th and 6th; Kethu in 7th; and Mars in 8th and 9th.*

General.—This month is peculiar for the phenomenal lack of good transits. No planet is in a good sign for the entire month and the only planets who are favourable for part of the time are Mercury and Venus and Mercury good or bad is throughout under check. Sun, Mars, Jupiter and Saturn are all evil for the entire month. But Sun and Saturn are under vedha throughout and Mars for the first half. Thus Jupiter is the only evil transit influence free of check. So in a month replete with evil transits, this check should bring some relief and comfort, though the few good transits can do very little by themselves. Disputes and quarrels, litigation, failures, wearisome journeys, loss of friends by death or otherwise, unwelcome changes, purposeless undertakings, illness, worries and anxieties, all kinds of miseries and unhappiness will be heaped upon the native but it is certain that the position will never become intolerable. Of the three stars of this sign, those born under Uttaraphalguna and Chitta will suffer much less than those born under Hasta.

Health and Domestic.—Both body and mind will be troubled this month. General debility will be present. You may be attacked with fever There may occur loss of blood through haemorrhage which may arise through disease or through accidents and wounds. The health of some of your children may need careful attention and may be the cause of continual worry, expense and anxieties. Neither will home conditions be happy and harmonious.

Finance and Speculation.—Very little benefit can accrue in the sphere of finance. Stress for money will be felt throughout as sufficient money cannot be found for the heavy demands upon your purse for this and that. Losses too are indicated through more sources than one. On the whole, a month of financial stagnation and despair. The only relief that is probable is help from willing friends whose help in some cases may be even unexpected. Speculation is taboo.

Real Property, Services, Profession, etc.—Landlords and landholders also will suffer a lot this month. Nothing will turn out to their satisfaction. Yield and rentals may be reduced and may become difficult of realisation. Tenants will give trouble and resort to litigation against you and through your position may be just, it may be difficult to prove it. The second half of the month will be even worse than the first. Therefore, knowing that times are bad, you should act accordingly, keep to routine, avoid quarrels and litigation and try to settle matters as far as possible through mediator and compromise. There is nothing favourable for the services either. Displeasure of Government, your superiors or men of influence, troubles through rivals and enemies, etc., are all probable. Your position or status may be threatened and dishonour and disgrace may not be far off But actually nothing need be feared if you lie low, keep to routine and do your work conscientiously and efficiently. Business and profession too are liable to be affected adversely and touch bottom with only occasional bursts of activity.

Women only.—The lot of the fair sex can be expected to be in no way better generally, though the influences will touch them less rigorously. In their case also, much of the evil can be averted if they keep to their own spheres of work and routine matters and do not attempt anything extra.

Still some pleasure through friendly visits, philanthropic actions, praise, etc., will come to them and afford some measure of satisfaction and relief from dull routine for the greater part of the month. The closing week is the worst for them.

Fortunate Dates:—Children's affairs and prospects—17; Speculation and investment—6, 9, 10, 17 and 21; Long journeys—9, 10, 21 and 27; Real property—14, 24 and 29; Educational and academical—10, 14, 17 and 29; Partnership and opposite sex—14 and 24; Professional and business—6, 17, 21, 27 and 29; Political and Government affairs—9 and 21; Interviews and tests—10, 14 and 17; Insurance and estate of deceased—9 and 10; Personal and domestic—6, 27 and 29.

Critical Dates:—Courtship and love affairs—12; Children's affairs and prospects—4 and 22; Speculation and investment—4, 11, 12, 18 and 22; Long journeys—12 and 26; Real property—19; Educational and academical—19 and 22; Partnership and opposite sex—4, 12 and 19; Professional and business—11, 18, 22 and 31; Interviews and tests—19 and 22; Insurance and estate of deceased—22 and 31; Personal and domestic—4; and Surety—12 and 22.

Chandrashtama from sunset of 16th to morning of 19th.

7. Thula (Libra).—*Jupiter in 2nd; Mercury in 2nd, 3rd and 4th; Sun in 3rd and 4th; Saturn in 3rd; Venus in 4th and 5th; Kethu in 6th; Mars in 7th and 8th; and Rahu in 12th.*

General.—Venus, Jupiter and Saturn are all favourable for the entire month. Sun is good for the first and Mercury at the beginning and close of the month. The only planet that is evil for the entire month is Mars and he is under check for the first three weeks. But as Jupiter and Saturn are also under check for the entire month, the good that may be expected from them may not materialise and the month may be notable for neither good nor bad results,—on the whole a nondescript month with mixed results in which the first half may be slightly better than the second. Some measure of success in your undertakings, increase in the sphere of your influence, auspicious events and celebrations, pleasure trips and excursions, help from friends, happiness and prosperity, friendship with good people, etc., will be met with to some extent at least during the first half. Some troubles may arise also through friends and relatives. Of the three stars of the sign, those born under Chitta and Visakha will fare better generally than those born under Swati.

Health and Domestic.—The month will be healthy ordinarily. But chronic sufferers from eye troubles, and stomach disorders cannot afford to be careless on that account and least disturbance should receive both hygienic and medical care. This applies also even to slight scratches or wounds you may suffer. But for slight bickerings and inevitable husband and wife quarrels and differences, the month will be generally happy and harmonious both at home and in social circles.

Finance and Speculation.—The entire month is good for finance and the first half will be better than the second. During the latter half, some pressure for money is likely to be felt because of heavy expenditure. As it is likely that a part of it is avoidable and caused only through extravagance, your own caution and restraint may avert such a position. It is probable that such an item of expenditure may crop up at about the middle of the month. Though speculation is not ruled out, chances for losses through rashness or overstepping prudent limits are so great that it will be better to avoid it altogether.

Real Property, Services, Profession, etc.—Some mesure of freedom from worries and cessation of difficult conditions may be experienced by landlords and landholders though this despite may be short-lived. So far as this month is concerned, there may not be much room to complain in the matter of yield and rentals which may even reach above average levels. Some reformatory changes that may have been in contemplation for some time without facilities for being carried out, may also find their fulfilment during this month. The services also will do generally well this month. Acquisition of new status or position, or other beneficial changes may accrue through the recognition of your merits in proper quarters and which may have been delayed or overdue for some time. So far as you are concerned, you should be careful to acquire all the necessary qualifications, etc., during the month as otherwise the influences may pass you by and such an opportunity may not recur again in the near future. This is an excellent month for the profession and business to go ahead with their projects and enterprises.

Women only.—The fair sex should find this month's influences fairly satisfactory for getting on with their activities, outings, excursions, parties and so forth, in pursuance of achievement of their pet ambitions. Courtships and love affairs will progress satisfactorily, though not without some vicissitudes and breaks, that may be caused through your own lack of adaptability or too great impressionablility leading to tension in relationships. Of course it should be possible to avoid these altogether by careful behaviour and attitude.

Fortunate Dates:—Children's affairs and prospects—6, 17 and 21; Speculation and investment—6, 9, 10, 14, 27 and 28; Long journeys—6, 10, 14, 24, 27, 28 and 29; Real property—14 and 17; Educational and academical—10 and 14; Partnership and opposite sex—9, 10, 14 and 27; Professional and business—6, 9, 10, 14, 24, 28 and 29; Insurance and estate of deceased—17 and 21; Personal and domestic—17; Courtship and love affairs—21.

Critical Dates:—4, 11 and 18; Speculation and investment—11, 19, 22 and 31; Long journeys—4, 11, 19 and 31; Real property—11 and 29; Educational and academical—4; Partnership and opposite sex—12, 19 and 26; Professional and business—4, 11, 19 and 31; Political and Government affairs—4; Interviews and tests—4; Insurance and estate of the deceased—18 and 26; Personal and domestic—11 and 18.

Chandrashtama from morning of 19th to sunset of 21st.

8. Vrischika (Scorpio).—*Jupiter in 1st; Mercury in 1st, 2nd and 3rd; Sun in 2nd and 3rd; Saturn in 2nd; Venus in 3rd and 4th; Kethu in 5th; Mars in 6th and 7th; and Rahu in 11th.*

General.—No planet except Venus is good for the entire month and Venus is under check for the greater part of the month. Mars is favourable before change of sign and Sun after change. This exhausts the list of favourable influences for the month, Mercury, Jupiter and Saturn being unfavourable throughout. Of these, Mercury is under check for the entire month, Saturn for the greater part and Jupiter not at all. This should give an idea that this month would prove somewhat difficult in general and nothing that is positively favourable can take shape so long as such transits are in force. Worries and anxieties, quarrels with friends and relatives, troubles from rivals and enemies as also relatives, losses, disgrace, unjust imputations, tedious journeys, delays and obstructions in all enterprises and undertakings, etc., are the sort of unwelcome happenings attributed to the transits of the month. Of the three asterisms of this sign, those born

under Visakha and Jyeshta will suffer far less than those born under Anuradha.

Health and Domestic.—Ill-health is not a necessary consequence of the evil transits of the month but because of the predominance of evil transits it is all the same better to be careful about one's digestion by being sparing in diet and avoiding heavy foods. Chronic sufferers may suffer from some eye troubles. Quarrels within the domestic circle, misunderstandings with relatives and troubles through them, loss of domestic comforts, etc., are all within the scope of the evil transits of the month.

Finance and Speculation.—Inspite of the fact that some influence or other is propitious for financial gains throughout the month, it cannot be said that the month will be an easy one in this respect. Financial worries, losses through fraud or deceit or following evil advice of interested persons, increased expenditure, etc., are all likely to result. This is not a month for new financial enterprises or ventures and speculation should be given a wide berth.

Real Property, Services, Profession, etc.—Troubles from landlords and landholders are almost certain. They will arise in connection with management, servants, tenants, etc., than otherwise. But yield and rentals may be alright and may not fall below expectations. The beginning of the month will be pretty bad in all respects including realisation of rentals, arrears, etc., but as the month advances, conditions are likely to improve but again the close of the month may prove to be actually trying. The services have nothing advantageous to look forward to during the month. In their case too, the beginning and close of the month will be the worst parts of the month. You may suffer loss of prestige through the crafty intrigues of your rivals and enemies and setbacks to your career and progress may arise through such causes. Even the unexpected and unforeseen element may take a hand to affect your discomfiture. The same observations apply wtih regard to the profession and business also.

Women only.—Women are likely to be the worst sufferers this month. They should not go out alone, without proper escort to unfrequented places, lest they suffer assault. They should not of their own accord contemplate or seek any changes. Attachments may be broken and sudden estrangements arise. Even with the soberest of them, tension may arise and leave undesirable consequences unless they are very careful and circumspect in their actions.

Fortunate Dates:–Children's affairs and prospects—10, 14 and 24; Speculation and investment—6, 17, 24 and 27; Long journeys—9, 17 and 28; Real property—17; Educational and academical—17; Partnership and opposite sex—10 and 21; Professional and business—6, 9, 14, 17, 21, 24, 27 and 28; Political and Government affairs—9 and 14; Interviews and tests—17; Insurance and estate of deceased—6, 27 and 28; Personal and domestic—9, 27 and 28; Courtship and love affairs—21.

Critical Dates:—Children's affairs —4 and 19; Speculation and investment—4, 11, 12, 18, 19 and 31; Long journeys—4, 22 and 26; Real property—4 and 11; Educational and academical—11 and 22; Partnership and opposite sex—12, 18, and 26; Profession and business—4, 19, 26 and 31; Interviews and tests—11 and 22; Insurance and estate of the deceased —4 and 31; Personal and domestic— 19; Surety—12, 18, 19 and 31; and Courtship and love affairs—12, 18 and 26

Chandrashtama from sunset of 21st to midnight of 23rd.

9. Dhanus (Sagittarius):—*Sun in 1st and 2nd; Saturn in 1st; Venus in 2nd and 3rd; Kethu in 4th; Mars in 5th and 6th; Rahu in 10th; Jupiter in 12th; and Mercury in 12th, 1st and 2nd.*

General.—Venus is the only planet in a favourable sign for the entire month and he too comes under check after change of sign. Mars becomes good after change of sign on 19th and is free of check. All the other transits for the month are unfavourable though Jupiter in 12th cannot be classed as wholly evil. Sun, Mercury and Saturn are all in evil signs only. Of these, Sun is under check throughout Mercury for the greater part of the month and Saturn not at all. Therefore it can only be expected that the month will generally prove a trying one. Long and tedious journeys, troubles through rivals and enemies, ill-health, obstructions, delays, and failures in enterprises, anxieties, disgrace and dishonour, are the unwelcome results that may be caused by the evil transits. As against all this, there is no good transit to balance. Perhaps the second half may prove less troublesome, because Mars is in a good sign. Of the three asterisms of the sign, there may not be much difference this month, as all will be more or less equally affected.

Health and Domestic.—Ill-health will manifest during the month according to constitutional predisposition of each. Blood pressure should be watched and least departure from normal should be promptly attended to. In the matter of diet, care is absolutely essential. Children's health also is liable to be affected and may be the cause for additional worries. Quarrels and misunderstandings are likely to mar peace and harmony within the domestic circle ranging from petty bickerings to serious matters.

Finance and Speculation.—In matters of finance, there will be appreciable difference between the first and second halves of the month, the former being totally unfavourable while the latter will be tolerable with some increase in income, extra gains, and success in enterprises. There is scope for some articles of luxury being acquired and enjoyed also. Even losses are probable during the first half through following the advice of evil and interested persons. But speculation is not favoured at any time within the month.

Real Property, Services, Profession, etc.—Yield and rentals may be satisfactory though this is no guarantee that all matters pertaining to landlords and landholders will prove favourable and gainful. In the case of a few even loss of property may take place and some may have to face litigation though they may try to avoid it ever so much. The second half is suitable for advantageously terminating such litigation and this opportunity may be availed of instead of trying to probing it. The services may do well during the month inspite of the transits, at least during the second half, but there is no scope for actual betterment in any respect. However they need not fear setbacks though a lot of difficulties may arise through scandals, unjust blame, and possibly false charges against you engineered by your enemies. The

normal, routine work should be adhered to at any cost. There is not much to help or hinder the normal working of the profession and business which may be average throughout.

Women only.—The fair sex are not much favoured this much as regards matters and interests in which they are peculiarly interested by reason of their sex and they are likely to meet with depression, disappointments. Quarrels with your associates and those that are near and dear to you, may arise. You may be easily imposed upon by undesirable persons who may seek to befriend you for ulterior purposes and cause you loss. It is better you do not go out with persons not thoroughly familiar to you.

Fortunate Dates:—Children's affairs and prospects—9, 10, 27, 28 and 29; Speculation and investment—9 and 21; Long journeys—6, 10, 14, 17, 24, 28 and 29; Real property—17, 28 and 29; Educational and academical—14 and 24; Partnership and opposite sex—6, 27, 28 and 29; Profession and business affairs—6, 10, 17, 21 and 27; Political and Government affairs—17 and 21; Interviews and tests—14, 21 and 24; Insurance and estate of deceased—9, 14 and 24; Personal and domestic—14, 21 and 24.

Critical Dates:—Children's affairs—11, 19 and 26; Speculation and investment—11, 12, 19, 22 and 26; Long journeys—11, 19, 22 and 31; Real property—4; Educational and academical—4 and 11; Partnership and opposite sex—4, 12 and 31; Profession and business—18, 19, 26 and 31; Political and Government affairs—26; Interviews and tests—4 and 11; Insurance and estate of the deceased—12, 18, 22 and 31; Surety—22; Courtship and love affairs-12

Chandrashtama from morning of 24th to forenoon of 26th.

10. Makara (Capricorn).—*Venus in 1st and 2nd; Kethu in 3rd; Mars in 4th and 5th; Rahu in 9th; Jupiter in 11th; Mercury in 11th, 12th and 1st; Sun in 12th and 1st; and Saturn in 12th.*

General.—Venus and Jupiter are good for the entire month and both are free of vedha throughout. This in itself is very favonrable. Though all the other planets are in evil signs, almost all of them suffer check. Sun, Mercury, Mars and Saturn, all of them are unfavourable and Mars is the only planet that escapes check and that only after change of sign. Though necessarily only mixed results can be expected for the month, there is every justification to expect that the good side will predominate. Happiness, gains, increased power and influence, auspicious events and celebrations, good news, honour, respect and general prosperity, enjoyment of articles of luxury, etc., are the good effects of the favourable transits. Because of the evil transits, especially during second half, there may be troubles through enemies, losses, disappointments and anxieties as also quarrels and misunderstandings generally. Of the three stars of this sign, the best results will be realised by those born under Uttarashada and the least benefitted will be those born under Sravana and those born with Dhanishta as their birth star will come between both.

Health and Domestic.—Beyond some usual minor ailments arising from cold, cough, etc., the month will be passed healthily on the whole in your case. But the same may not be the case with your children whose health may need some urgent attention during the second half. But there will be no reason for anxiety as they will yield quickly to prompt treatment because of the helpul influences also. Home and domestic surroundings will be happy and harmonious and you will also become popular in social circles.

Finance and Speculation.—The month's influences are best for finance. Gains will come in from more sources than one and financial ventures will meet with success and the returns will be adequate to the amount of time and labour involved. There will be opportunities for achieving success especially through writings, transport, or through well-thought out contracts. But this is not a month for making easy money as considerable labour, mental and pysical, will be involved in such products. There is scope for success in speculation also.

Real Property, Services, Profession, etc.—Without having any of their major problems solved, landlords and landholders may find this month on the whole favourable for their interests, yield and rentals may even be above normal and prove satisfactory. There is scope sor acquisition of fresh items to your holdings and also other profitable investments made. Some definite solution may be sought for many of the outstanding problems but it cannot be expected that they will be completely satisfactory. Though the month as a whole is favourable for the services, it is probable that they may commit mistakes through oversight, haste or sluggishness or other causes which may cause serious consequences. Hence it is very important that whatever work you do, even routine, should be done with the utmost care and caution, especially the whole of the second week. Increased turnover and greater work will render conditions quite satisfactory for the business and profession and gains will reach above normal levels.

Women only.—The fair sex will have cause to rejoice this month. Conditions are favourable for their getting good dress, perfumes, and other articles of luxury that are dear to the feminine heart. Some are likely to enter into the joys and thrills of matrimony and in the case of some, it will be the joy of succeeding the examinations, tests, etc., which will enable them to secure jobs and some will get employed too.

Fortunate Dates:—Children's affairs and prospects—10, 14, 17 and 21; Speculation and investment—9, 17 and 24; Long journeys—6, 17, 21, 24 and 27; Real property—9 and 27; Educational and academical—9 and 28; Partnership and opposite sex—6, 10, 14 and 24; Profession and business—6, 10, 14, 17, 21, 27, 28 and 29; Political and Government affairs—29; Interviews and tests—9 and 28; Insurance and estate of deceased—6; Courtship and love affairs—10, 24 and 21.

Critical Dates:—Speculation and investment—11, 19 and 22; Long journeys—4, 11, 12, 19 and 31; Educational and academical—11; Partnership and opposite sex—4, 12, 22, 26 and 31; Profession and business—11, 12, 19 and 31; Insurance and estate of the deceased—4; Personal and domestic—22; Surety 11 and 22; Courtship and love affairs—12 and 19.

Chandrashtama from morning of 26th to noon of 28th.

11. Kumbha (Aquarius).—*Kethu in 2nd; Mars in 3rd and 4th; Rahu in 8th; Jupiter in 10th; Mercury in 10th, 11th and 12th; Sun in 11th and 12th; Saturn in 11th; and Venus in 12th and 1st.*

General.—Venus and Saturn are favourable for the entire month. Mercury is good except for the last week, Mars for the first seventeen days and Sun for the first half. Of these, Mercury alone is under check for the entire month. Mars is under vedha only so long as he is good and Venus for the last week only. Thus the only planet in an unfavourable sign for the entire month is Jupiter. He is free of vedha. Though vedha affects the good planets also, they are more numerous and more powerful. It is significant that favourable Sun and Saturn are unchecked throughout. Therefore the general results for the month will be good and the year opens bright under favourable transit influences. Success and prosperity in enterprises, happiness, new position

and honours, gains of various kinds, good health, success over rivals and enemies, gain of good and influential friends, luxuries, educational and academical triumphs, etc., are the favourable results for the month, especially for the first half which will be generally better than the second. Of the three stars of the sign, those born under Dhanishta and Purvabhadra will reap much better benefits than those born under Satabhisha.

Health and Domestic.—The month will be healthy as a rule. During the last week or ten days some digestive troubles are indicated which can be averted by care in diet and general habits, especially hot and pungent things should be avoided. A few luxuries may be acquired and enjoyed and the domestic circle will be happy and harmonious. Children will be a source of pleasure. Auspicious events and celebrations also are probable.

Finance and Speculation.—Financial affairs will take on a bright appearance with Sun and Saturn in eleventh during the first half and unchecked. But great care in financial projects and enterprises will be necessary especially during second half with Jupiter in tenth. There will be increased expenditure no doubt but that will be because of a festive mood and purchase of luxuries, or in auspicious matters and celebrations. Even so, such items should not be allowed to reach beyond limits.

Real Property, Services, Profession, etc.—Landlords and landholders also are likely to have a good time this month with satisfactory yield and rentals. They can inaugurate improvements, new methods designed to increase yield with a long view. They can also make long-term arrangements for cultivation, tenancy and so forth. This month is also good for investments but proper security of title deeds and through enquiry will be necessary to avoid any lacuna in title or in the property itself. The services too are favoured this month. New position or status or promotion, etc., will be due. There is also the likelihood of those employed temporarily to secure permanent footing. The unemployed too have got chances of being employed at least on a temporary footing. The profession and business will flourish on above average levels and reap good income and profits this month. As in all other matters, the first half will give better results for their industry than the second.

Women only.—This is a good month for the fair sex. There will be plenty of opportunities for them to realise their long-cherished ambitions, gaining honour, distinction and increase their range of experience on various levels. They will be able to secure for their interests the help of benevolent persons in influential positions. Matrimony probably awaits some of the unattached born under this sign and not a few will experience throes of child-birth probably for the first time.

Fortunate Dates:—Children's affairs and prospects—6, 27 and 28; Speculation and investment—14, 17 and 24; Long journeys—9, 10, 21 and 29; Real property—9, 10 and 21; Educational and academical—17 and 21; Partnership and opposite sex—6 and 17; Profession and business—9, 10, 14, 21 and 27; Political and Government affairs—14; Interviews and tests—14, 17 and 21; Insurance and estate of the deceased—6, 17 and 29.

Critical Dates:—Children's affairs —11 and 31; Speculation and investment—4, 12 and 22; Long journeys—4, 18, 19 and 26; Real property—18 and 26; Educational and academical —4, 12 and 26; Profession and business—4, 11, 18, 19, 26 and 31; Political and Government affairs—4 and 18; Interviews and tests—4, 11, 12, 22 and 26; Insurance and estate of the deceased—11 and 31; Personal and domestic—11, 18 and 22; Surety —4 and 12.

Chandrashtama from beginning of the month to 3rd noon and again from noon of 28th to sunset of 30th.

12. **Meena (Pisces)**—*Kethu in 1st; Mars in 2nd and 3rd; Rahu in 7th; Jupiter in 9th; Mercury in 9th, 10th and 11th; Sun in 10th and 11th; Saturn in 10th; and Venus in 11th and 12th.*

General.—There are many good transit influences for the month but not all of them can function fully because of obstruction by vedha. Venus, Sun and Jupiter are favourable for the entire month. Of these Jupiter alone comes under check for the entire month, Sun and Venus being free throughout. Mars becomes favourable after change of sign on 19th but at the same time comes under check. Mercury also favourable for nearly the whole month is under vedha so long as he is good. Saturn in 10th is not a wholly evil influence but is under check for the greater part of the month. As it is, the general results will be quite good but not brilliant as it would be if it were not for vedha. Prosperity and success in general undertakings, gain of friends, articles of luxury, cheerfulness, pleasures, increased returns, triumph over rivals and enemies, auspicious events and celebrations and accomplishment of one's desires are the good things to be expected for the month especially for the latter part. Of the three stars of the sign, persons born with Purvabhadra and Revati will fare much better than those born with Uttarabhadra as their birth star.

Health and Domestic.—Bilious and windy complaints are the only form of health trouble that may occur during the month but they will be neither severe nor prolonged being most confined to the first half. The rest of the month will prove good for health. Happiness and harmony will prevail at home and social circles with gain of friends. Your popularity will be enhanced. It is also quite probable that you will be able to buy some articles of luxury for your pleasure and enjoyment.

Finance and Speculation.—The finances for the month will be satisfactory with increased gains from more sources than one and success in financial enterprises. But at the same time, great care will be needed in scheme and enterprises that are not routine and are of sizable proportions because of Saturn in 10th. The special kind of care that will be required this month is that because there is some gain should not be recklessly followed up as the results will be to wipe out even the previous savings. Such experiences are not infrequent in gambling, races and speculation.

Real Property, Services, Profession, etc.—It is rather unfortunate that with such predominant good transits, landlords and landholders will not be able to reap the full measure of benefit from them. On the other hand, their sufferings and disabilities are likely to continue, though in this some relief and betterment may be in evidence this month. Profits and rentals may not suffer diminution and routine matters too will not be affected adversely. The month is very good for the services in fact one of the best in the whole year if not the best. New position, and honours, position of authority, triumph over rivals and enemies, increased efficiency attracting attention in proper quarters and recognition of your merits, friendship of influential persons interested in your uplift and welfare, new employment, beneficial changes are the probable results. Profession and business will expand and bring in increased gains of returns though not without considerable work and struggle.

Women only.—This is also one of the best months in the year for the fair sex who may find it well suited for all their pet activities, parties,

social enterprises, etc., etc. Those engaged in literary and educational fields can achieve notable success in their respective spheres by being able to import new inspirational and intuitive perception even in routine matters and daily work. The aesthetic sensibilities will be generally quickened.

Fortunate Dates:—Children's affairs and prospects—9, 10 14 and 24; Speculation and investment—9, 24, 27 and 28; Long journeys—9, 10, 14, 17, 21, 27 and 28; Real property—6, 27 and 28; Educational and academical—6; Partnership and opposite sex—6, 27, and 28; Professional and business affairs—6, 10, 14, 17, 21, 24 and 29; Political and Government affairs—10 and 14; Interviews and tests—6; Insurance and estate of deceased—10, 14, 17 and 21; Personal and domestic—24 and 29.

Critical Dates:—Children's affairs—19, 22, 26 and 31; Speculation and investment—11, 12, 18 22 and 26; Long journeys—12, 18 and 26; Real property—11 and 31; Educational and academical—4; Partnership and opposite sex—11 and 31; Profession and business—4, 19 and 26; Interviews and tests—4; Insurance and estate of the deceased—12, 18 and 26; Personal and domestic—4 and 26; Surety—12, 18 and 19.

Chandrashtama from noon of 3rd till noon of 5th and again from sunset of 30th till end of the month.

AS IT STRIKES ME

(Continued from page 8)

the fault of Parasara. Be it remembered that Parasara wrote out his system in India and for Indians, and that it was extended later to others. It is unscholarly to say that since a yoga based on Bhavas given by Parasara cannot take place outside India, it should be a yoga based on rasi system. Who are we to amend a text to suit our preconceived conclusions? There is the text; accept it, if you like; but you have no business to twist it and condemn it. The present writer has the chart of one born in India with Jupiter as the lord of the 9th and 10th cusps; and though Jupiter is exalted, his dasa has not been wholly a benefic one. This is strictly in keeping with Parasara's rules. One need not go to Iceland or to Tasmania to distort Parasara.

Mr. Nixon has taken *Bhavartha Ratnakara* also to be on the side of the rasi system. Readers may kindly look to the first chapter only dealing with Mesha Lagna. There the sixth verse reads: "If Mars is in conjunction with the sixth and eighth lords, death occurs in the course of his Dasa and Bhukti by disease pertaining to the head". For Mesha Lagna, if we accept Mr. Nixon's contention, Mars is the lord of the ascendant and of the eighth. But the author is speaking of a yoga where Mars will not be the lord of the eighth. He wants Mars to join the lords of the sixth and the eighth. In other words the eighth lord for Mesha can be Venus or Jupiter. This will be only when we admit with the author of *Bhavartha Ratnakara* that it is applicable to the bhavas, not to the rasis. This instance is enough to show how a preconceived notion can lead even Mr. Nixon to misread a simple text. Mr. Nixon quotes the fourth verse of the first chapter, but forgets that the author does not say anything about Jupiter and Saturn, but only about the lords of the 9th and 10th houses. It is in the translation that Prof. Raman, for the sake of clarity, mentioned the planets. Even the author at times mentions cases like Jupiter becoming the lord of the third and sixth. This does not mean that he follows the rasi system. Even when the bhavas are taken up, for Thula Lagna Jupiter can become the lord of those two houses. This is the natural way of interpreting the texts.

From the standpoint of Hindu astrology, therefore, there was never any confusion between Rasi and Bhava. From the time of Parasara, it is admitted that it is a basic error not to apply the methods of sign rulership to bhavas. Thus for Aries, one can have Mars as the lord of the first two houses.

It is also an error to say that Hindu astrology does not calculate the aspects *in mundo*. Sripathi's text and earlier still Parasara have given us methods to calculate the *bhavabala* or strength of the bhavas. Here one source of strength comes from drishti or aspect. These aspects, if they fall, between 30 degrees and 300 degrees, do contribute some strength to the bhavas and also to the planets. Here bhavas alone are taken into consideration.

The rasi system and the bhava system have always been kept distinct. Because of the precession of the equinoxes, the Hindu authorities have given the rules regarding ownership and the like on the basis of the signs. Such rules are intended to be applied to bhavas when we come to predictive astrology. The secret of Hindu astrology lay not in its rules, but in the interpretation of the rules. This interpretation was largely handed down orally. This has led to a confusion in the understanding of the earlier authorities on the subject.

(Continued from page 24)

whole the year is not good for Ceylon. Natural calamities, strikes and violent demonstrations will give lot of headache to the Government. As Kanya navamsa with Jupiter and Mercury rises in Rangoon, the Military Government of Burma will be able to run the administration smoothly. There are no indications of elections being held according to schedule. We propose to deal with Burma in greater detail in the next issue of THE ASTROLOGICAL MAGAZINE. Party and personal rivalry will continue to bedevil the efforts of the King of *Nepal* to evolve some sort of a representative Government. There will be considerable infiltration of communists into the ranks of the armed forces and lawlessness will prevail in several parts of the country. With India cordial relations will continue. Nepal occupies a strategic position and what happens there will be a matter of great concern to us. The King must be beware of the United Democratic Party.

UNITED STATES

Mars in the ruling sign of America aspected by Saturn foreshadows a particularly anxious year for America. There will be no weakening of her efforts to "contain communism" either in Europe or Asia. America will reconcile herself to the risk involved in aiding Chiang-kai-Sheik. Scorpio rises in Washington with Jupiter within 4°. This is evidence of the paramount part U.S.A. would play in world affairs. Jupiter in Lagna and Venus aspecting Lagna restrain any policy involving the use of force by America. All the malefic aspects involving Mars, Saturn and Rahu are focussed on the 11th. This disposition favours America in her foreign relations and policy, but in the domestic sphere, she will have many troubles of her own—political wrangles, increase of crime, transportation bottlenecks, racial riots and strikes in automobile and mining industries. The 2nd and 7th are both afflicted by Saturn and Mars. Therefore America will become more than ever convinced, that co-existence is not possible. Consequently, the NATO and other alliances will be further intensified. In fact, the NATO will acquire a very different emphasis and orientation. As the King of the Planetary Cabinet is Jupiter and as two benefics focus their influences on the Lagna rising at Washington, it is clear that cold war will be continued avoiding at the same time a purely negative condemnation of the communist block. Though the 5th house is afflicted, it is also aspected by Jupiter, lord of the 5th. Therefore, America will have before her mind clear-cut policies to be followed towards different countries. Lord of the 2nd (from the sign rising at Delhi) Mercury in the 5th aspected by Jupiter favours India receiving appreciable financial aid, while martian aspect on Virgo indicates the signing of an Indo-American Pact whereby India will receive aid in the shape of military equipment, etc.,—a response to emergency but without any political strings attached. The Ascendants rising at Delhi and Washington being *samasapthaka* favour cordial relations between India and America. A delicate sense of restraint comes in the way of America openly disapproving Pakistan's war-cry towards India, but as we have already mentioned earlier, it is America that will be mainly responsible in preventing an Indo-Pakistan clash. The 8th house affliction also indicates the passing away of an elderly statesman, now in the American Government. The President will be able to keep himself out of the tumble of partisan politics. Throughout 1959 America will continue to exercise tremendous influence on world affairs and practical necessity demands that most of the Western democracies would depend on U.S.A. for comfort and security.

SOVIET RUSSIA

In Moscow, the 20th degree of Aries rises, while the meridian falls within 7 degrees from the position of Saturn. Rahu is in the 6th house. Both the 6th and 10th are aspected by Mars, the 10th in addition having Saturn located there. The relieving features are Navamsa Lagna being occupied by Jupiter and Venus. The planetary dispositions affecting Moscow in the New Year chart signify not only an intensification of the cold war but a resort to dangerous pressure tactics. Khruschev will deliberately provoke the Western powers and his intervention in the Middle East affairs by liberal supply of arms and extension of economic aid will once again poise power blocks on the brink of war. But Jupiter's situation in Navamsa Lagna, will make the Soviet leader think twice before embarking on a self-destructive adventure with the result there will be no world war. Within the Kremlin intense struggle for power will go on amongst top Soviet leaders but Khruschev will hold the trump-card. As Saturn is in the 11th from the ruling sign of Russia, there will be no sudden developments in the beginning of the year, but as Mars comes nearer to Rahu, unlooked for occurrences from within will come to the fore. Russia will be guided by her 'concern for the peace of the world'. Despite the intense phase of the cold war by about September 1959, Navamsa Lagna well disposed denotes that by the end of the year the relations between Russia and U.S.A. will have undergone a seeming transformation exercising a potent influence on world peace. Mars aspects the 10th from Navamsa Lagna, denoting an aggressive spirit, violent happenings in satellite countries and political purges at home. Much activity in foreign affairs and diplomatic gains and success are also denoted. The October solar eclipse, the preceding conjunction of Mars and Rahu and the succeeding conjunction of Mars and Saturn are all pointers to the development of an unusual situation in the Kremlin and a change of the political structure of the U.S.S.R. to come off in the next few years. Russia makes quite a few threatening gestures, but she will come under the throes of some sort of another internal revolution among her leaders. The Ascendants rising at Delhi and Moscow are *Dwirdwadasa* (2nd and 12th). Therefore relations between Russia and India will not be cordial. But nevertheless a commercial treaty between these two countries cannot be ruled out. Mars is dominantly situated, casting his aspect on the 10th house. This is ominous. Death of an important Soviet statesman is also indicated. As Soviet efforts will be aimed at political infiltration into India—mark the situation of Rahu in the 6th in the ruling sign of India—our leaders must be beware of Russia.

CHINA AND JAPAN

The end of Gemini rises at Peking. Though Mars is in the same sign he falls in the 12th house. This means the country will suffer from some sort of internal civil strife or revolt of a serious nature which will be ruthlessly suppressed. Though the 7th lord happens to be Jupiter, the 7th house is aspected by Mars. Militarily China becomes fully prepared but she will not precipitate any serious crisis though, on the issue of Formosa, an atmosphere of tension will be kept up. There is no indication that the communists would really invade Formosa. American policy towards China remains almost unchanged and *status quo* will continue. Lord of the 10th Jupiter aspects the 10th. This denotes some kind of national rejoicing. Mr. Mao Tse Tung will have a hazardous time and his health is threatened. Chiang-kai-Sheik will be quite active behind the scenes. The October eclipse will have adverse effects on China threatening counter-revolutions and upheavals in Man-

churia and Tibet. Relations with Soviet Russia will become less cordial. It is the transit of Virgo by Mars that will again cause the Far East crisis when China will carry out a very skilful manoeuvre confronting the Americans with a grave situation. China and Russia will come closer in economic matters. With India also, China's relations will not be as friendly as hitherto. About June-July, the Central Government will be reconstituted and some ministers dismissed for rightist leanings.

Japan will have a comparatively peaceful year but there will be considerable political turmoil in regard to matters affecting U.S.-Japan relations. The 17th degree of Cancer is on the Ascendant and the meridian point falls in the 3rd quarter of Aswini ruled by Kethu. Cancer being a watery sign and Aries a fiery sign, the country is in for huge losses of life and property, due to bad storms, volcanic eruptions and tidal actions especially about the end of September when both Mercury and Venus simultaneously transit the first quarter of Chitta constellation. Since the third house is afflicted, relations with China will be strained. While Japanese-American relation will also have to pass through a critical stage, Japan will continue her active association with Western democracies. The 7th house and the 7th lord being aspected by Mars denotes that the U.S.-Japan mutual security Treaty would be so recast as to allow Japan to rearm herself paving the way for her once again becoming a great military power. Japan will extend sizable economic aid to us and even in international matters, Japan comes nearer to India to the discomfiture of the communist block. The third house being afflicted causes discontent among employees and brings serious accidents. It also indicates some legislative measures affecting the Press. As the Emperor's Lagna is afflicted, he must be beware of his health. The fall of Mr. Kishi's Government is also foreshadowed.

EUROPE

The pattern of events to happen in Western Europe is rather confusing. The 22nd degree of Aquarius rising on the Ascendant at London with lord of Lagna in the 11th and Jupiter posited near about the meridian denote a fairly good year for *Great Britain.* In the next General Elections which will take place soon after the April solar eclipse, the two principal parties—Conservatives and Labour—will be involved in a bitter contest. Though the chances will be even, the Conservatives are likely to win with a thin majority. It is on the international level that the elections will be fought. The London meridian point and the American rising degree are very near each other. Therefore on important world issues, America and England must see eye to eye with each other. Britain will however have no influencing power in Washington. Mr. Macmillan's horoscope has bright facets though at the end of the year he will come under certain adverse aspects threatening his health. The Labour Party will have troubles to maintain its leadership. Mars in the 5th aspected by Saturn in the 11th favours further industrial expansion. But export orders will fall. Because of the disposition of Rahu in the 8th, an unpleasant scandal affecting a notable figure in the public life of Great Britain is threatened. Jupiter in the 10th is a clear indication that Britain's role in world affairs would be considerable. As the conjunction of Mars and Rahu in September takes place in the 8th from the rising sign at London, there will be outbreaks of violence and the possibility of a national sorrow. The 7th lord Sun is in the 2nd aspected by Jupiter. Britain will therefore gain some lost allies, prestige and friends. Due to the affliction of the third lord, general hindrances to shipping occasioned by storms cause setbacks in commerce. With India relations will be friendly and Britain will play a significant part in getting us financial aid. While a certain section of the Press in Britain will indulge in Nehru-baiting Britain will help India in her efforts to make democracy a success. There is no indication of Britain coming out of any military alliances she has with America. The 29th degree of Kumbha rising at Paris with lord of Lagna well placed and Jupiter within about 10° from meridian assures a stable administration for *France* and the political turmoil which continued to be the rule rather than the exception ever since the Fourth Republic was founded will be consequent by its absence. As Saturn aspects Lagna and as Jupiter occupies a favourable disposition, De Gaulle's rule while authoritarian will be largely benevolent and France would make rapid strides both economically and industrially. The 7th lord being aspected by Jupiter also favours France's voice being more effectively heard in international affairs. She will extend sizable economic aid to her colonies. Though Algeria will continue to give trouble till about the time of Rahu-Mars conjunction, there is every chance of this issue being solved before the end of the year. Considerable industrial unrest is foreshadowed in the latter part of the year, but the administration will be firm in dealing with the situation. Many African colonies though independent will prefer to continue under French tutelage.

It is interesting to note that in the coming year *Italy* leans towards right in Government and left in the aspirations of her people. The Pope must be careful about his health as Jupiter occupies a maraka place in Navamsa Lagna. There will be volcanic eruptions about the time of Mars-Saturn conjunction while a movement to revive Fascism will come to the open about the time of Mars-Rahu conjunction. The 18th degree of Aquarius rises in Berlin while the 1st degree of Sagittarius culminates on the meridian. Mars will be within about seven degrees from the 7th house. This is a pointer to the fact that the problem of Berlin would add great tension to the already critical situation. No understanding would be reached on Berlin and the matter will drag on. *Germany* on the whole will not have a peaceful year to pass through. East Germany will be the scene of serious political disturbances especially after the April solar eclipse. Scorpio navamsa rises at *Bonn* indicating outbreaks of violence arising from strikes. Militarily West Germany will be a power to reckon with. Marshal Tito's health is threatened. With Russia *status quo* will be maintained. *Yugoslavia's* relations with the West will remain quite cordial. Events in Poland, Hungary, Czechoslovakia and other east European countries will be marked by internal political restlessness and a strong revivalist movement. While Poland will be more peaceful, Hungary will have to pass through the throes of another revolt by about October. Russia's grip on these countries will be firm but paradoxically, especially in Poland, there will be some sort of a pronounced return to capitalism and private enterprise.

MIDDLE EAST

Rahu's transit of Virgo aspected by Saturn from Sagittarius, does not favour stable political conditions in most of the Middle East countries. At Cairo the 22nd degree of Pisces rises, within 3° from the lunation while Saturn is very near the meridian. Saturn will transit the exact meridian point once about the middle of April 1959 and again by about the middle of December. These two periods will be ominous for Egypt, Iran and Iraq indicating unexpected developments, assassinations, movements of armies, sudden changes of ruling heads and even mob hysteria. Stability in the

Arab world will be conspicuous by its absence. Mutual suspicions among Arab States and distrust of each other will again break up the Arab world into two camps—the one pro-Western and the other leaning towards Russia. Paradoxically, all these Arab nations, except perhaps Iran, will be united in regard to one issue, *viz.*, obliteration of Israel. Turkey will loyally continue to follow the West, while in Iran there will be a *coup d'etat* directed against the King. The young King of Jordon should be particularly careful about his person. Western attempts to prop up his rule will not be successful. Prospects for *Israel* are comparatively cheerful. She will receive impressive military aid. *Israel* will also get exposed to an attack by the U.R.A. on the question of the Gaza strip but the intervention of the U.N. will localise the fighting. The Middle-East problem will continue as a problem, mainly because there will be deliberate attempts on the part of Russia to exploit the situation against Western powers. Round about the lunar eclipse time Ankara will be rocked by serious seismic disturbances President Nasser is in for some trouble by about December due to treachery brought about by his own lieutenants.

OTHER COUNTRIES

Indonesia will continue to be torn by strife, civil war and economic bottlenecks. Dr. Soekarno will be coming under exceptionally adverse influences affecting his prestige and health. So far as *Thailand* is concerned, there will be a *coup* when the Sun transits Leo but the present military administration will be strongly entrenched. Thailand will try to keep up a semblance of neutrality. In other parts of East Asia such as Indo-China, Malaya, etc., no significant developments which call for notice, are anticipated except that in Malaya the menace of communist agitation will become very active.

That *Canada* will be amazingly prosperous is revealed by the movements of Jupiter. An important trade agreement will be negotiated with India. Martian disposition denotes further racial riots in *S. Africa* and Government's belligerance with any outside interferences in her policies. Seismic disturbances and tidal waves will cause havoc to *Australian* shipping. The country will have a generally prosperous year. Political strife will be evident in several countries of the South American republics, notably Brazil and Ecquador. Military rule is likely to be established in Argentine. Most of the South American countries will exhibit an unfriendly attitude towards U.S.A. In Mexico, the President will have serious illness. In all these trouble spots, the indicated evil results can happen by about the times of the October solar eclipse and the Mars-Rahu and Mars-Saturn conjunctions.

Summing up, we find that true to the name of Vikari, perverse political conditions will prevail in several countries, but there is no danger of a global war due to the predominance of Jupiterian influences. From an astrological point of view, significant factors which will pattern the world events are the absence of the Sun and Mars from, and the dominance of Jupiter and Moon in the Planetary Cabinet, the principal rain-producing cloud going under the name of Thamo, the lapse of 15 lunar days and increase of 9 lunar days, Jupiter's *athichara* and his movements being confined to two signs, the solar eclipse on the New Moon day of Bhadrapada being invisible in India, and the transit of Rahu in Kanya and his being continuously aspected by Saturn. The high-lights of the year would be, an intensification of the cold war between Russia and America, dramatic developments in the Kremlin leading to further purges, significant changes in the Central Government of India, deterioration of Indo-Pakistan relations to the point of war—but not actual war—local fighting in the Middle East, conservative victory in England and the prevalence of an uneasy and deceptive peace in the world. Preoccupied as she will be with her innumerable problems at home and in satellite countries, Russia is unlikely to take any drastic action that will threaten a world war. Arab unity will be a chimera. Some sort of a new balance of power would be established in the Far East bringing together Formosa, S. Korea and Japan under a mutual defence pact which in its turn would be linked to the NATO. No genuine attempts will be made to solve any of the complicated world problems. The U.N. will of course live in a state of suspended animation. But nevertheless, Jupiter enables at least some of the world's statesmen to look at things in an unprejudiced manner.

It is not possible, nor is it desirable, to astrologically anticipate all the one thousand and odd things that happen in this wide world. It requires a stupendous amount of labour and the services of an army of learned astrologers if predictions touching every part of the world were to be made. We have therefore confined ourselves to discovering important happenings of topical interest which have a bearing on the future of nations, so that responsible men at the helms of affairs may take suitable precautions to at least minimise the intensity of the evil. We can easily dismiss the suggestions of some of our eminent but prejudiced leaders that by "looking at the stars', no problems could be solved. Nor can any problems be solved either by platform orations or by condemnation of this hoary science. Astrology reveals, at least in a general manner, if not in intimate detail, the pattern of things to happen in the life of an individual or a nation, and gives warnings in advance of the impending troubles. With the power of prediction should go the power of avoiding or at least minimising dangers, individual or national. We cannot stop a motor car that is about to run us down, but we can step aside. We cannot avert a Mars-Saturn combination or the earthquake it denotes, but we can be prepared to meet the situation. The man who professes to prefer ignorance to knowledge of what the future is likely to hold in store for him may lead a merry life but the odds are against its being a long one. The stars do not take any interest in us. We just sit within the four corners of a room and introspectively discover in what manner our past karma—national or individual—expresses itself as a future event, and how this is indicated by the stars. The Sun does not care where his light and heat go. But we want sunlight for our own health and existence. Similarly we are interested in the stars, in their movements and in their associations, not for the sake of stars but for our own sake. Some of the so-called educated but uninformed minds accuse astrology of promoting the theory of fatalism. And they also contend that predictions, especially of an unfortunate nature, have a demoralising effect upon the mind, resulting in disastrous psychological reactions or complexes. Both these objections are untenable. "The ablest men of all races and times have consulted their stars, nor were their minds adversely affected thereby. The reason may be unseated by an unbalanced addiction to almost any pursuit, but where the intellect is inherently sound, astrology will rather increase than diminish its efficiency. An astrologer well grounded in his science will, if he possesses the capacity therefor, be the most reasonable and rational of men, enriched rather than impoverished by his devotion to the heavenly lore."

The best tonic for the evils indicated by the planetary positions for 1959 is to put absolute faith in God to lead loyal, simple and moral lives and to make noble efforts for sinking personal differences and to adopt suitable measures for the regeneration of man. OM TAT SAT.

Daily Guide

FOR JANUARY 1959

BY MIHIRA

1. Thurs.—L.D. 7 till 4–15 a.m. (night), then L.D. 8. Uttaraphalguna till 1–50 a.m. (night), then Hasta. A.M.: Favourable for children's affairs and prospects, dealings with relatives, love affairs, courtships, auscious matters, dealings with opposite sex in general, good for journeys, study and research. P.M.: Not good, generally bad for dealings with servants, superiors, interviews, etc., likelihood of losses, also bad for journeys.

2. Fri.—L.D. 8 till 2–5 a.m. (night), then L.D. 9. Hasta till 0–20 a.m. (night), then Chitta. A.M.: Generally unfavourable, liability to false accusations, losses through theft, troubles through inferiors, care in dealings with strangers and superiors necessary; bad for changes, removals. P.M.: Continues evil, bad for travel, changes, losses, beware of rivals and enemies as they will be active; avoid bad company.

3. Sat.—L.D. 9 till 11–50 p.m. then L.D. 10. Chitta till 10–45 p.m. then Swati. A.M.: Slightly bad for financial matters and enterprises, social activities, new attachments, dealings with opposite sex, etc., but only till forenoon (9 a.m.). P.M.: Unfavourable, avoid waste of money on pleasure, luxuries and women, hasty commitments or engagements, avoid bad company.

4. Sun.—L.D. 10 till 9–30 p.m. then L.D. 11. Swati till 9–10 p.m. then Visakha. A.M.: Unfortunate for journeys and voyages, liability to losses through fraud or unsound speculation, a critical period generally. P.M.: Continues unfavourable; likelihood of disappointments, liability to be victimised by fraud and deception; avoid shady or equivocal actions.

5. Mon.—L.D. 11 till 7–15 p.m. then L.D. 12. Visakha till 7 35 p.m. then Anuradha. A.M.: Very unfavourable, liability to accidents, avoid crowds, fast moving vehicles, arguments with undesirable persons, guard against theft during journeys, avoid opposite sex. P.M.: Good for all purposes, business activities, academical tests, interviews, journeys, litigation, contacting new friends, dealings with opposite sex.

6. Tues.—L.D. 12 till 5–5 p.m. then L.D. 13. Anuradha till 6–5 p.m. then Jyeshta. A.M.: A generally unfavourable period, but specially bad only for dealings with public *en masse* or social activities; situations may arise in which you may be compelled to come to a decision by extraneous pressure to your detriment; try to avoid such situations. P.M. Good for business activities, but likelihood of losses by theft during journeys.

7. Wed.—L.D. 13 till 3 p.m. then L.D. 14. Jyeshta till 4-40 p.m. then Moola. A.M.: Not good for servicemen generally; guard against loss of reputation, censure, etc., by being careful even in routine matters, avoid travel, financial ventures. P.M.: Mildly favourable for journeys, business activities, commercial interests, but there is a liability to accidents unless careful.

8. Thurs.—L.D. 14 till 1-5 p.m. then L D. 15 (Amavasai). Moola till 3-30 p.m. then Poorvashada. A.M.: Not very favourable generally, likelihood of emotional disappointments, avoid contact with the opposite sex, avoid work in which you have to depend on the goodwill or mercy of others, as it is not likely to be forthcoming. P.M.: Favourable for making changes and making new contacts, etc.

9 Fri.—L.D. 15 (Amavasai) till 11-40 a m. then L D. 1. Poorvashada till 2-50 p.m. then Uttarashada. A.M.: Not good; danger of setbacks in any matter; you should not be abrupt in your dealings with others as this is liable to be misconstrued, avoid scenes of violence, crowds, etc.; do not violate hygienic habits, be moderate in what you eat and drink. P.M.: An uncertain period; care in whatever you do is essential; avoid all important actions.

10. Sat.—L.D. 1 of bright half of lunar Pushya month till 10-45 a.m. then L.D. 2. Uttarashada till 2-35 p.m. then Sravana. A.M.: Favourable for physical activities, sports and athletics, short journeys, putting into execution original ideas, dealings with relatives, interviews, etc. P M.: Generally favourable for all purposes except for matters connected with oppotite sex, courtship or love affairs, dealings with the public.

11. Sun.—L.D. 2 till 10-20 a.m. then L.D. 3. Sravana till 2-50 p.m. then Dhanishta. A.M.: Generally unfavourable, likelihood of disappointments, quarrels with friends and relatives, and losses through them; bad for changes, removals, domestic matters; women may develop hysterical troubles. P.M: Continues evil, liability to accidents, losses through violence, theft, scandal, disgrace, etc.

12. Mon.—L.D. 3 till 10-20 a.m. then L.D. 4. Dhanishta till 3-30 p.m. then Satabhisha. A.M.: Uncertain period; avoid extravagance, avoid dealings with superiors, interviews, etc; avoid litigation. P.M. Unfavourable in general; avoid important actions and enterprises, dealings with public, opposite sex, bad for courtship and love affairs, likelihood of emotional disappointments.

13. Tues.—L.D. 4 till 10–50 a.m. then L.D. 5. Satabhisha till 4–40 p.m. then Poorvabhadra. A.M.: An ordinarily good period, journeys, activities in art, music, psychical matters, excursions, etc. P.M.: Good for all matters connected with study, research, journeys, literary and journalistic activities, matters connected with transport, communications, dealings with servants, superiors, etc.

14. Wed.—L.D. 5 till 11–55 a.m. then L.D. 6. Poorvabhadrapada till 6–20 p.m. then Uttarabhadrapada. A.M.: Good for dealings with superiors, interviews, new enterprises, financial ventures, new friendships, journeys, changes of residence, love affairs, etc. P.M.: Continues favourable for initiating new schemes, dynamic leadership, mystic and occult activities.

15. Thurs.—L.D. 6 till 1–20 p.m. then L.D. 7. Uttarabhadrapada till 8–25 p.m. then Revati. A.M.: Not favourable for changes or journeys but good for business matters, literary activities, planning, social activities, love affairs, but women have to be careful. P.M.: Good for journeys, new friendships, literary and artistic activities, excursions, especially on water or sea, holidaying, etc.

16. Fri.—L.D. 7 till 3–15 p.m. then L.D. 8. Revati till 10–45 p.m. then Aswini. A.M. Unstable conditions prevail; bad for money matters, speculation, dealings with political or Governmental bodies, journeys or travel, changes, liability to accidents should be kept in mind; women beware of liaisons. P.M.: Favourable for gains through industry or investments, help from friends, favourable attachments.

17. Sat.—L.D. 8 till 5-20 p.m. then L.D. 9. Aswini till 1-20 a.m. (night), then Bharani. A.M.; Liability to contentions and quarrels; bad for dealings with employers and superiors in office; beware of false friends and losses through women; avoid dealings with public *en masse*. P.M.: Generally favourable, financial ventures, social activities, dealings with women, investments in real property, etc.

18. Sun.—L.D. 9 till 7-25 p.m. then L.D. 10. Bharani till 3-55 a.m. (night), then Krittigai. A.M.: Good for business, literary activities, litigation and dealings with lawyers, journeys, help through influential women, but all the same great care will be needed as both L.D. and star are not favourable. P.M.: Likelihood of losses and extravagance through women, avoid opposite sex.

19. Mon.—L.D. 10 till 9-45 p.m. then L.D. 11. Krittigai till 6-20 a.m. (night), then Rohini. A.M.: Bad period, liability to accidents and bodily hurt for men or animals, troubles through rivals and enemies, likelihood of losses; avoid quarrels. P.M.: Bad for changes and removals, financial matters and enterprises, love affairs, liability to be involved in scandals and broken attachments.

20. Tues.—L.D. 11 till 11-25 p.m. then L.D. 12. Rohini whole day and night. A.M.: Bad for making changes in any matter, dealings with public in general, postpone important decisions and do not commit yourself to doing actions you cannot possibly justify; avoid opposite sex. P.M.: An unsettled period but bold and energetic action may secure good results.

21. Wed.—L.D. 12 till 0-45 a.m. (night), then L.D. 13. Rohini till 8-30 a.m. then Mrigasira. A.M.: Good for financial enterprises, exploiting original ideas, developing aesthetic susceptibilities, dealings with opposite sex, forming of new friendships. P.M.: Continues good for all of above matters, and also dealings with relatives, arranging domestic affairs, children's affairs, etc.

22. Thurs.—L.D. 13 till 1-45 a.m. (night), then L.D. 14. Mrigasira till 10-15 a.m. then Ardra. A.M.: Generally favourable for all purposes but it is better to postpone decisions in important matters; auspicious matters may be avoided altogether. P.M.: Not favourable, bad for dealings with superiors, officials, journeys, domestic matters, financial ventures, etc., likelihood of losses by theft.

23. Fri.—L.D. 14 till 2-10 a.m. (night), then L.D. 14 (Poornima). Ardra till 11-35 a.m. then Punarvasu. A.M.: Danger of loss in financial enterprises, avoid litigation, dealings with professional people, contracts; avoid actions that are liable to be misconstrued though done in good faith. P.M.: Avoid acting on impulse or a sense of inner conviction, postpone important decisions.

24. Sat.—L.D. 15 (Poornima) till 2-5 a.m. (night), then L.D. 1. Punarvasu till 12-20 p.m. then Pushya. A.M.: Generally good period for business activities, dealings with superiors, interviews, journeys, contentious matters, litigation, etc. P.M.: Continues less favourable for all of ahove matters; avoid new ventures, enterprises, risky jobs and undertakings.

25. Sun.—L.D. 1 till 1-30 a.m. (night), then L.D. 2. Pushya till 12-40 p.m. then Aslesha. A.M.: Critical period; bad for journeys and voyages, liability to losses through fraud or unsound speculation, avoid opposite sex and compromising situations. P.M.: Likelihood of accidents, disgrace or losses through opposite sex, bad for changes, financial ventures, dealings with Governmental or Corporate bodies.

26. Mon.—L.D. 2 till 12-30 p.m. then L.D. 3. Aslesha till 12-30 p.m. then Makha. A.M.: Likelihood of troubles and losses through women, avoid extravagance, auspicious matters, litigation, opposite sex, extravagance, decisions in important matters. P.M.: Continues evil for all matters connected with opposite sex, danger of scandal and disgrace; bad for financial matters, social activities.

27. Tues.—L.D. 3 till 11-5 p.m. then L.D. 4. Makha till 11-55 a.m. then Poorvaphalguna. A.M.: Good for business activities and expansion, energetic enterprises, journeys, canvassing, physical and mental activities, advancement in profession, dealings with relatives, exploiting original ideas. P.M.: Bad for financial enterprises, liabilities to losses arising out of fraud, unsound speculation and so on.

28. Wed.—L.D. 4 till 9-5 p.m. then L.D. 5. Poorvaphalguna till 11-0 a.m. then Uttaraphalguna. A.M.: A bad period generally, liability to accidents through fire, electricity, explosions, etc.; beware of contacting new friendships, as there is real danger through disastrous attachments; avoid opposite sex. P.M.: Bad for dealings with relatives, friends, superiors, etc.; avoid doubtful actions liable to misinterpretation.

29. Thurs.—L.D. 5 till 7-20 p.m. then L.D. 6. Uttaraphalguna till 9-45 a.m. then Hasta. A.M.: Bad time, beware of money losses, troubles through inferiors or servants, bad for dealings with superiors, officials, interviews, domestic matters, journeys, dealings in real property. P.M.: Favourable for all matters in general; good for journeys, dealings with women and favours from them, assumption of new position, business and professional activities.

30. Fri.—L.D. 6 till 5-5 p.m. then L.D. 7. Hasta till 8-20 a.m. then Chitta. A.M.: Bad for money lending, standing surety, travel, dealings with professional people, superiors, interviews, litigation, new attachments, domestic matters, etc.; avoid waste and extravagance. P.M.: Continues unfavourable but to a lesser extent.

31. Sat.—L.D. 7 till 2-45 p.m. then L.D. 8. Chitta till 6-40 a.m. then Swati till 5-5 a.m. (night), then Visakha. A.M.: Not good for literary matters, correspondence, interviews, services in general, journeys, dealings with children, dealings with opposite sex, courtships or love affairs. P.M.: Critical period during which you may be unable to decide correctly in any matter that comes before you; avoid decisions in important matters and postpone.

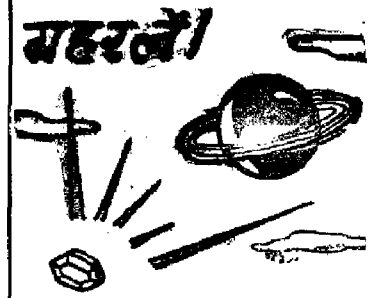
ASTRAL GEMSTONES



"Astral Gemstones are the real gemstones; but all the real gemstones are not necessarily the Astral Gemstones".

There are different kinds of gemstones, and each kind has within it different qualities, which qualities differ amongst each other—due to the minerological characteristics of the spots of the earth, in which they are originally located.

It is, therefore, necessary to select not only the kind but also the relative quality within the kind, in view of the planetary conditions of the native.

You may apply for the prescriptions of the correct Astral Gemstones, sending birth chart, giving therewith date, time and place of birth and full name (sex) and address of the native.
